THE TRADE IN CLEVELAND.

September Opens Up Actively but Volume of Business Unsatisfactory to Dealers—Higher Grade Outfits Have the Call—New Victrola XII. Attracting Much Attention—What Various Talking Machine Men Have to Say Anent Conditions Present and Prospective.

(Special to The Talking Machine World.)

Cleveland, O., Sept. 7, 1909.

The talking machine business was undesirably quiet in August, usually one of the most inactive months of the year. September has opened more actively and trade has materially improved in the past week, but the volume of business is much less than it should be at this time of year. Expansion in most, if not all, industrial lines characterizes the situation generally, and the talking machine trade is beginning to feel the impulse of the renewed activity. An increasing demand is noted by the wholesale dealers, and both the wholesalers and the retailers are carrying good sized stocks of machines, cabinets and records.

For several months past the trend of demand has been for the higher-grade machines and records, including Victrolas, Amberol records and graphophones, and as respects the better line of goods, trade has more than held its own with a year ago. Conditions are more favorable for an unusually good fall trade. Good fortune has favored the farmers of Ohio this year in a yield of 23,000,000 bushels of wheat, and the harvest of corn and oats breaks all records. This prosperity of the farmers will largely increase the talking machine trade.

The Victrola XII. is attracting attention and is highly commended by both dealers and patrons, and promises to prove a profitable adjunct to the trade.

Frederick Gunther, a member of the Metropolitan Opera Company, and whose first number for the Victor, Neidlinger's beautiful song of devotion, appeared in the August list, is in Cleveland visiting his father and mother, and incidentally the talking machine dealers.

T. H. Towell, president of the Eclipse Music Co., returned from a two-weeks' eastern trip Sept. 2.

"Our August business," said A. W. Robertson, of the G. J. Probeck Co., "was very good—much better than it was a year ago—and is slowly but surely improving all the while. We are getting more customers, but as yet they are buying in small quantities. Our machine sales are still light, but we have a large number of fine prospects which we shall soon close. Our record sales are very good and improving largely in proportion as men are finding steady employment in the various industries."

"September has started in with a promise of better trade, which was only fair during August," said Mr. Biesinger, manager of the W. J. Roberts, Jr., Co. "Inquiries for machines are more numerous than they have been for some time, and there is a good demand for the September records, especially for the Edison gold molded records, of which we have already sold a large number. Prospects look bright for a good fall trade."

Mr. Denslow, manager of The Talking Machine Store, 27 Taylor Arcade, said: "You can put August down as having been a dead month, occasioned by the extremely hot weather. Only the most enthusiastic lovers of music patronized talking machine stores during those sizzling days. September has inaugurated more encouraging conditions, and I think will prove more profitable than any month we have had this year. There is a good demand for the September list of records, which are proving highly popular."

Business at the May Co.'s during August was reported to have been about the same as for the previous month. Mr. Tinker, manager, said that while there was not much doing in machines, there was a fairly good demand for records, and trade had been improving since the first of this month.

"Business was very moderate in August," said W. H. Buescher, of Buescher & Sons. "Mechanics and working men have not yet begun to buy machines or records so freely as they used to before the financial flurry of two years ago. But the mills and factories are again in nearly full operation, and the operatives, many of their old customers, are beginning to come back. We made sales of a number of machines last month and our sales of records are increasing. We look for a good fall business."

B. L. Robbins, of B. L. Robbins & Co., stated they had a very good trade the latter half of August, having made sales of a number of machines, while the record business is good and growing. He said conditions were daily improving.

T. H. Towell, of the Eclipse Music Co., who recently returned from a trip east, said conditions in the talking machine line were quite as good, if not better here, than in the eastern field. "Business," said he, "is fair. The jobbing trade is steadily improving and the prospects look very good. We shall unquestionably have a good fall trade."

The talking machine and piano department of the Bailey Co. has been removed from the sixth to the fourth floor of the new twelve-story addition and is now in complete running order. The company has sent out invitations to attend the opening of the new parlors, to take place Sept. 9, and state that "the superiority of its appointments and comforts will be better obtained by personal observation." Mr. Friedlander, manager of the talking machine department, said that business was very satisfactory, and that the gratifying increase in their talking machine trade had necessitated the great improvement. At the opening guests will be entertained with Victor and Edison records, orchestra music, a spread, and each visitor will be presented with one of Witmark's latest songs.

Phil Dorn, of Collister & Sayles, stated that business during August had been very quiet, but since the first of September had been materially improving in the retail department. "It is a little early yet for the jobbing trade," he said, "but we are securing some orders, and I look for quite a revival this month. The demand for records is very good and the prospective sales of machines is encouraging."

At the music store of H. E. McMillin business is moving along prosperously. Mr. McMillin said: "On the average we find the talking machine trade much better than it was last year. Taking into consideration conditions generally, our sales are averaging up well in all lines of musical instruments. During July and August we sold several Victrolas, which was not the case last year. The sale of high-class records is better than it was last year at this season."

John Reiling, the exclusive West Side handler of Columbia goods, is doing a satisfactory business. He stated that while trade was not all that could be desired, he felt very much encouraged in the improvement of the past two weeks and thinks that by the first of November the talking machine business will have resumed its wonted activity. He said sales of the August list of records had been good and that the September selections were fine.

At the Gibson Phonograph Store, 3032 Lorain avenue, trade was reported rather quiet, but with a fairly good demand for records.

"Business is just fair," said the manager of the talking machine department of Brown Bros. "Trade is always good on Saturdays when men are paid off, but has been quiet on other days. As the cooler weather is approaching there are signs of improvement, and we expect a good increase in business this month." The company

handles Columbia disc machines and records exclusively.

Mr. Flesheim, of Flesheim & Smith, said: "Business in the talking machine line is very good indeed. We handle Victor and Zonophone goods. While the sale of machines during the summer months has been slack, there has been an excellent and steady demand for records, which during the past two weeks has materially increased. The prospects are very flattering."

Aldrich, Howey & Co., dealers in Columbia goods, have moved from 2120 to 2100 Ontario street to more expansive quarters. Mr. Howey said they were doing a very satisfactory business in the talking machine line, and expressed great confidence in the future of the trade.

OHIO DEALERS WANT A CHANGE.

Anxious to Have State Clearing House Established to Settle Surplus Record Question.

Ohio talking machine dealers are active in their endeavor to establish a State exchange for talking machine goods in order to save the trouble of sending records, etc., back to the factories. Though the plan has been under consideration for a long time the dealers want the matter settled as soon as possible and before the final meeting scheduled for February 4, 1910, in Columbus.

As is well known records that have a heavy sale in one locality will be practically dead stock in another, while a record of a different nature would prove just the reverse. To equalize this matter will be the function of the exchange.

The financing of the proposition is easy and will not require the expenditure of much money. Every dealer in the State will, when the exchange is established, at once forward his surplus stock of records, horns and other accessories to the central exchange office and he will be given credit upon the books for the horns or other accessories which he exchanges. He can then draw from the stock any records or style he needs without sending into the factories, thus enabling all dealers to more easily dispose of their goods. The exchange will not necessarily employ many people, but it is possible that a dozen girls can be given employment. A large building, suitable for handling at least 50,000 records, several hundred machines, hundreds of horns, etc., besides musical instruments, will be necessary.

A GREAT CAMPAIGN OF PUBLICITY

Planned by National Phonograph Co.—To Spend Half a Million Dollars in Nearly 500 of the Leading Mediums of the Country.

The National Phonograph Co. have in course of preparation one of the most elaborate advertising campaigns in history, providing for the expenditure of over half a million dollars. Besides using twenty-five of the leading magazines of the country, the Edison phonograph copy will be sent out to over four hundred and fifty leading newspapers of the country in towns and cities of more than 10,000 population. The National Co. expect the talking machine business to be as good, if not better than it was before the panic, within six months at least and believe that extensive advertising will do much to accomplish that end. The sales staff of the company has been increased 50 per cent. in anticipation of the heavy demand.

THE PASSION FOR GOOD MUSIC.

There was a moving-picture show proprietor in Cincinnati who didn't know any more about grand opera than a cow does about an automobile. One day, however, he heard some one say that the music was sung in French, Italian and German. The moving-picture man went away thinking, says the Circle Magazine. The next day he opened a "penny arcade" in the foreign quarter—the sort of a place where you put a penny in the slot and hear a phonograph play. Everybody warned him against the venture because every "penny arcade" that had been tried in that quarter had ended disastrously. The newcomer smiled and hung out his sign. Within a week his place was being crowded. He had filled his phonographs with the French, Italian and German grand opera selections. He couldn't tell one record from another, but the people who paid him their pennies could.

IT PAYS TO TEACH EMPLOYES.

Instructions to employes may with profit be occasionally repeated. Even those who thoroughly understand them are helped by having their minds refreshed on some of the points, while to the majority the repetition will come with all the force of a new idea. A teacher, referring to a recent experience with her class, remarked: "Education is largely a process of pouring water through a sieve in the hope that some will cling to the meshes."

Sometimes it is found that the second explanation of a process, method or attitude accomplishes more vital work in the development of the employe than does the first. The reason for this is that the first explanation has prepared the mind for it, so that when it is explained a second time there is enough of the first thought left to answer to the second—to appreciate it and make it welcome.

The average employe likes to learn more and more about his business; and if instruction be given in the right way it becomes an effective quickener of every phase of purpose and energy.

Many employers aand managers need to be often reminded of the undeveloped resources of their men and women. It is just as much a part of good business judgment to work the field of individual capacity as it is to work more and more thoroughly the fields of trade.

Failure is more often due to a want of ideas than to a want of capital. It always pays to cultivate ideas.

Interesting NEWS for YOU, Mr. Dealer!

Have You Seen Our SPECIAL LIST of 150 Extra Fine

EDISON RECORDS?

HERE IS A CHANCE FOR YOU TO DO SOME BUSINESS!

IMPORTANT! **Read every word of the following:** We call your attention to our special list of 150 extra fine Edison Records (135 Standard and 15 Amberol) which we have compiled after playing over 3000 Edison Records of the foreign production, and after judging each record on its merits. In compiling this list we have spared no effort to make it perfect and you can offer any record on this list to your customer and feel sure of making a sale.

THIS LIST HAS BEEN PREPARED ESPECIALLY FOR AMERICAN TRADE AND CAN BE SECURED ONLY THROUGH THE S. B. DAVEGA CO.

JONES PATENT AGAIN IN COURT.

Judge Hough Denies Motion for an Injunction Against the Universal Talking Machine Mfg. Co.

The Jones patent process for duplicating disc records was again in the United States Court Friday, August 13, in the case of the American Graphophone Co. (Columbia Phonograph Co.), New York, against the Universal Talking Machine Mfg. Co., Newark, N. J. The American Graphophone Co.'s statement which was reiterated at the hearing by C. A. L. Massie, regarding their application for an injunction, etc., follows:

"Under the agreement by which the Victor Co. were licensed to manufacture and sell records made by the patented Jones process, the Graphophone Co. waived in writing all claim for past infringements by the Universal Co. This company was not licensed to continue manufacturing its so-called Zonophone records, however; but on the understanding that the Universal Co. was merely a subsidiary company, owned or controlled by the Victor, they have heretofore been suffered to continue since the injunction was granted.

"Recent developments have seemed to indicate, however, that the Victor Co. does not control the Universal Co., and affidavits to that effect have been made by General Manager Geissler, of the Victor Co., and President Royal, of the Universal Co., in litigation which is pending in Chicago. The American Graphophone Co. has therefore petitioned the United States Court, in order to enforce its rights against the Universal Co., under the injunction already granted, asking that they be held in contempt for disregarding the injunction and for an accounting of all records since made, and that they be compelled to desist forthwith the further manufacture and sale of the so-called Zonophone records."

Prefacing his argument, in opposing the motion, Horace Pettit, general counsel for the Victor Talking Machine Co., with the remark: "We are rather surprised at this action. The relations of the companies in question are the same as they always have been," he then controverted the contentions of his adversaries in his further presentation. At the close of the hearing Judge Hough indulged in brief comments regarding the position of the complainants, but reserved decision. The next day he filed the following memorandum:

"The admission and assertion by moving party of an oral license to the Universal Co. is, when fully considered, fatal to this motion. Such license is not only hard to establish, but, if admitted, its terms must be made plain. The only thing plain is that the Universal Co. was given some license to violate the terms of the injunction of 1907. Now, it is said, they are violating it too much. Parties who agree to a violation of injunction cannot expect the summary and drastic remedy of contempt when they disagree about the extent of permission. Motion denied."

Subsequently, Counsellor Massie told The World that they would now proceed to take testimony and submit proofs in the regular way, and that they would therefore apply for an order to this effect.

FRIEDRICH'S HANDSOME QUARTERS.

The J. A. J. Friedrich's House Conducts a Very Complete and Splendidly Equipped Department Devoted to the Victor and Edison Machines and Records Which They Handle—Some Observations Made by the World Correspondent on a Recent Visit.

(Special to The Talking Machine World.)

Grand Rapids, Mich., Sept. 4, 1909.

It's a joy to go through the extensive talking machine quarters of the J. A. J. Friedrich Music House, of this city. Besides a salesroom on the main floor, the apartment occupies the entire third floor of the adjoining building, and also a large part of the Friedrich building proper. The appointments of the room are admirable throughout and the complete separation of the retail from the wholesale is noticeable. A very large room is devoted exclusively to machine sales, every type of Victor and Edison machines being mounted on a suitable cabinet. Over each machine is an electric light provided with a reflector. There are also separate Victor and Edison demonstrating rooms and between two of the retail rooms is the retail stock room. The wholesale department is an immense room by itself and the stock of Victor records is such as to foster the belief that wholesale orders are filled with the utmost completeness. An interesting feature are two of the large cabinets devoted entirely to the red seal catalog. The arrangement is unique in that the records of each artist are contained in a compartment or compartments by themselves.

When an order comes in for a Caruso record it is located in an instant, and the state of the Caruso stock can be learned at a glance. Furthermore, the records are kept in cardboard compartments, provided with covers which, of course, keep out the dust and dirt. Trios, duets, quartettes and sextettes and the several complete operas also have departments to themselves. This is only one of the many fine features inaugurated by F. A. Steinman, the manager of the talking machine department, and dealers can obtain many good ideas from him that are adaptable to their own business. Otto Friedrich, son of the proprietor of the business, is now devoting all his time to traveling for the wholesale talking machine business, and is meeting with excellent success. The house has a large and loyal following among the Western Michigan dealers and the number of their clients is continually increasing.

NEW CONCERN IN BROOKLYN.

The Mathews Phonograph Co. is a new concern at 573 Fulton street, Brooklyn, N. Y., who handle the Columbia line. Their initial order called for $2,000 worth of goods.

TRADE ON THE PACIFIC COAST.

Business Quiet in All Larger Cities—Country People Busy With Crops—Eilers Music House Become Columbia Distributors for Oregon and Washington—Columbia Trade Good on Coast—Some Personal Items—Edison Business Much Improved—Pacific Phonograph Co. Active—Wiley B. Allen Co.'s Fine New Department—Sherman, Clay & Co. Pushing the Victor Line—Other News Items of the Month.

(Special to The Talking Machine World.)

San Francisco, Cal., Aug. 28, 1909.

August has brought considerable improvement to the talking machine business in San Francisco and the larger cities in other parts of the Coast, but business is still very quiet in most of the smaller towns, as the country people are now very busy taking care of the crops, and will not have the leisure to take much interest in amusements for another month. Even in the cities the improvement has been rather less than was expected, but the end of the vacation season has brought in a good deal more inquiry. The outlook is still very satisfactory, and unless all indications are misleading next month will bring conditions fully up to normal.

The Pacific Coast department of the Columbia Phonograph Co., through the Portland, Ore., office, has just closed another large deal, which is similar in magnitude to the transactions recently carried out in California. By the new arrangement the Eilers Piano House of Portland, and the Eilers Music House, successor to the D. S. Johnston Co., of Seattle, become distributers of the Columbia line of talking machine goods, covering practically the entire territory of Oregon and Washington. The Eilers houses have branches at almost every place of any importance in the territory, giving them one of the greatest distributing systems on the Coast, and it is believed that they can handle the line to great advantage. The Eilers interests have placed orders with the Columbia Phonograph Co. amounting to $50,000, the goods to be delivered in two shipments, one to Portland and one to Seattle, and are expected to arrive within a few weeks.

W. S. Gray, coast manager for the Columbia Phonograph Co., reports a very satisfactory wholesale business all over the Coast, and has no complaint to make about the retail trade in this city, though the local end is expected to make a much better showing as soon as the store can be opened downtown. No permanent location has been secured yet, however, and some time is likely to elapse before the move can be made. Mr. Gray returned about two weeks ago from a vacation in southern California. He found the southern business in fine condition, and says that the Southern California Music Co., which is handling the Columbia goods in that end of the State, is having great success with the line, and reports a very encouraging outlook for Fall trade. Kirk, Geary & Co., the Columbia distributers in northern California, are sending in orders all the time, and are enjoying a satisfactory business.

E. Scott, local manager for the Columbia, returned from a vacation at Los Angeles and Santa Catalina this week.

Fishing and hunting appears to be the order of the day in talking-machine circles. Eldridge R. Johnson, president of the Victor Talking Machine Co.; B. G. Royal, of the Universal Talking Machine Co.; Leon F. Douglass, of the Victor company, and Peter Bacigalupi the prominent talking machine man, of San Francisco, have just returned from a deer hunt in the wilds of Mendocino County. On their return they made a visit in an automobile to Hotel Del Monte and the Santa Cruz big trees. Messrs. Royal and Johnson have returned to New York via Los Angeles, and Mr. Douglass will leave Sept. 9 with his family for a visit to the East. This will be his first trip to the Atlantic Coast in three years, during which time he has been recovering his health at his home in San Rafael, Cal.

Mr. Bacigalupi finds the Edison business greatly improved, both in wholesale and retail departments. He states that the orders he is getting from dealers in all parts of the country show increased confidence, and certainly better business than they have had for the last month or two. The new Cygnet horn, he says, is attracting great attention all over the Coast, as it takes up so much less room, and gives greater satisfaction generally than the old horn. Mr. Bacigalupi has had quite a rush on the Zonophone ten-inch records, a large lot of which he recently purchased from Kohler & Chase, and which he is selling at 25 cents.

C. M. Jones, of the Pacific Phonograph Co., is making preparations for a big run of business next month, and counts on a steady increase from now till the end of the year. He states that when Kohler & Chase's new building is occupied, about the first of December, the entire wholesale stock will be brought to this side of the Bay. The samples of the new Edison machines and horns have been received, and Mr. Jones believes they will be good sellers. The stock will be put on sale September 25, but a large part of the first shipment will be taken to fill advance orders.

The Wiley B. Allen Co. are devoting the Sutter street side of their new store to the talking machine business. The department was opened on August 14, at the formal opening of the store, and has been very busy from the start. It is in charge of James J. Black, who has for some time been conducting the department of the Oakland store with great success. On the ground floor are three large demonstration parlors, one for Victrolas and two for Victor machines. In the basement is a large display room for Victor and Edison machines and goods, and ten special rooms for the demonstration of Victor and Edison records, with the most approved arrangements of stock for convenience in demonstrating. Some work is still being done on the store, but it is practically finished, and the stock has been complete for some time. A talking machine display is also placed in the large windows of the Kearny street front.

Sherman, Clay & Co. are making an extra display of Victor goods and Victrolas in their windows since the opening of the Wiley B. Allen Co.'s department, and there is considerable retail competition between the two establishments, though both expect to gain by the concentration of business. Mr. McCarthy reports continued heavy sales of the new Victrola machine, as well as the older models, and notes considerable improvement in both wholesale and retail departments.

G. O. Heine, the old-time piano man, says that he is seriously considering the installation of a talking machine department when he opens his new store on Stockton street.

Clark Wise states that his talking machine department is going as well as usual, and he has had a large demand for the new model Victrola. He finds, however, that for some reason there is less buying by people from out-of-town than in former years, and believes that this side of the business will be much better after the Portola celebration.

It is announced that hereafter testimony at coroners' inquests at Los Angeles will be recorded on a commercial talking machine instead of being taken down by shorthand. The coroner recently made application for an appropriation to purchase one of the machines, which he believes will save a great deal of time and trouble.

THE ROCKFORD BOOKCASE CO., has now taken over the line of cabinets made by the Rockford Cabinet Company, in order to better handle the enormous business worked up on this line of goods.

The question of storing record and sheet music cabinets is getting more important every day and this season our cabinets are being illustrated with 6 different interiors. Our catalogue will show you what we have put into the line, and you should have it on file for emergency. Most dealers place stock orders to be shipped during the season.

CONDITIONS IN LITTLE ROCK, ARK.

S. M. Field & Bros. Preparing for a Record-Breaking Business—Public Showing More Appreciation of Talking Machines—Want Higher Grade Outfits.

(Special to The Talking Machine World.)

Little Rock, Ark., Sept. 1, 1909.

S. M. Field, of S. M. Field & Bros., of this city, in a chat with The World correspondent regarding trade conditions, said: "We cannot be discouraged in our effort to prepare for a record-breaking fall and winter business. While our work this summer has not brought unusually good results we will not complain, in view of a most promising future condition. It is our opinion that the public have awakened to the fact that talking machines are wonderful instruments, not mere toys, and this must in due course make the buying of higher grade machines the rule instead of exception."

PHONOGRAPH FOR HIGH SCHOOL COURSE.

(Special to The Talking Machine World.)

Windsor Locks, Conn., Sept. 5, 1909.

The board of education, through Superintendent of Schools Daniel Howard, will introduce in the high school course this next fall the teaching of languages by the phonograph. This is the first high school in this part of the country to adopt the phonograph in instruction. The course has been rearranged and in connection with the grammar course this year French and German will be taught.

Reg. U. S. Pat. Off.

What are you going to do this year?

¶ Certainly a great, great deal more than last. The tariff has been settled, thousands are being daily put to work, the crops of the country are the greatest in its history, and there will be a liberal letting loose of the coin of the realm.

¶ From now on we experience the real golden days of the Victor selling season, so be the WISE dealer and place your order for machines and records at the earliest possible moment—AT ONCE.

¶ This is the time to do a lot of thinking. The question of ordering your machine and record stocks is now under consideration. And the question demands your immediate thought, and EXECUTION.

¶ We are here to help you with one of the finest machine and record stocks in the country, and our famous PERFECT SERVICE insures your orders receiving the promptest and best attention possible.

¶ With pleasure at your service.

NEWS FROM THE SAINTLY CITY.

Steady Improvement Noted in Trade as Fall Approaches—St. Louis Talking Machine Co. Make Preparations for Busy Season—Perparing for Centennial Celebration—Columbia Store Reports Good Business—Union House Furnishing Co. to Move—Their Big Talking Machine Department.

(Special to The Talking Machine World.)

St. Louis, Mo., Sept. 5, 1909.

The talking machine business for the month of August has been generally quiet, but the latter part of the month showed a good improvement, which presages a good trade for the month of September. All indications point to a good fall and winter trade, and all the dealers believe that they will have it.

The St. Louis Talking Machine Co. are most sanguine that everything points to a fall trade of unusual magnitude, and have made preparations accordingly. This firm by its splendid example of optimism has infused and inspired in their dealers a spirit of buoyancy and faith in the immediate future that promises great returns. Already a splendid increase in out-of-town orders is noted, and from all sides they are receiving the assurance of the hearty co-operation of their dealers to make this the banner fall business in the history of the talking machine trade.

O. A. Gressing, manager of the St. Louis Talking Machine Co., has just returned from a ten days' visit with his sister in Milwaukee, where he went to recover from an attack of malaria that took possession of him on his last trip south.

S. H. Johnson, of the St. Louis Talking Machine Co., is spending ten days visiting his mother in Ypsilanti, and also calling on old friends in Detroit.

Miss Converse, also of this firm, returned from her vacation and expresses herself as more pleased with the heat of St. Louis than the cold of Lake Michigan.

L. A. Cummins, traveler for the St. Louis Talking Machine Co., is on a prolonged trip through southwest Arkansas and Oklahoma and will be on the road about a month.

Recent trade visitors to the St. Louis Talking Machine Co. were T. J. Keith, Summerfield, Ill.; R. A. Gray, manager the A. Sellner Co., Quincy, Ill.; W. W. Fisher, Murphysboro, Ill.; Dr. J. A. White, New Franklin, Mo.; C. N. Buchanan, Cairo, Ill.; Samuel M. Field, Little Rock, Ark., and Thomas B. Anderson, Memphis, Tenn.; C. E. and E. F. Brokaw, Queen City, Mo.

The Centennial Celebration, which extends from Oct. 3 to 9, will be a great affair, and the St. Louis Talking Machine Co. are extending to all their dealers a hearty and cordial invitation to make their headquarters with them while in the city.

Manager E. B. Walthall, of the Columbia Phonograph Co., reports that their August trade was considerably better than a year ago, and that everything points to an excellent trade from now on. Mr. Walthall, accompanied by his wife, returned, Sept. 6, from a two weeks' vacation, which was spent at his old home at Horse Cave, Ky. This concern recently sold one of their symphony grand cabinet graphophones to the members of the Merchants' Exchange here, who purchased it as a present to the new United States Cruiser St. Louis. F. G. Cook, formerly retail manager of the retail department of the Chicago office of the Columbia Phonograph Co., has succeeded W. S. Byrd as traveling salesman for the local office. He has just returned from his first trip after establishing a number of new dealers throughout this State.

W. A. Brenner, of the Koerber-Brenner Music Co., returned, Sept. 6, from a vacation of nearly two months, which was spent in Colorado. This firm report that their business is picking up nicely and that they will have a good fall and winter trade.

D. K. Myers, the well known Zonophone dealer, reports that trade is improving right along with splendid prospects from now on.

Marks Silverstone, of the Silverstone Talking Machine Co., reports good prospects and that trade is picking up.

W. H. Allaire, who succeeded Mr. Klohr as traveler for the National Phonograph Co., throughout this State, was a recent visitor here.

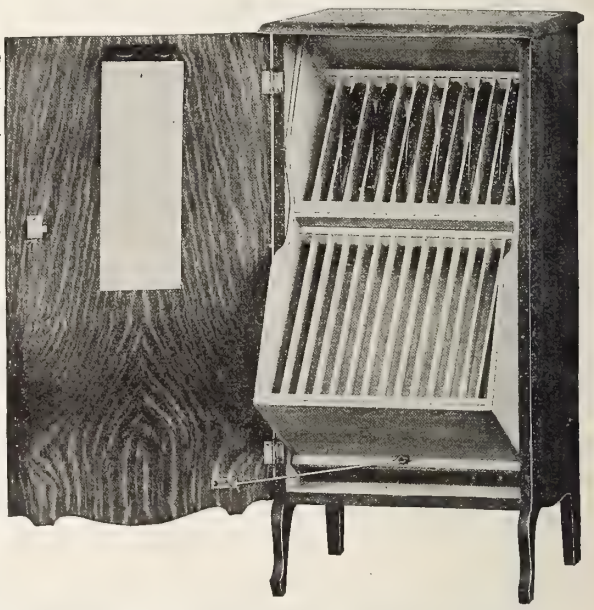
The Thiebes-Stierlin Music Co. report that their talking machine trade for August was up to expectations, and that they consider the prospects for the fall and winter to be first class.

Mr. Knight, of the Knight Mercantile Co., reports that everything looks very bright for a good fall and winter trade.

The Union House Furnishing Co. will remove to their handsome new store at the northwest corner of Seventh street and Washington avenue on Oct. 3. They will occupy several floors in the Lind building at the southwest corner of Seventh street and Lucas avenue, which is right back of their new building. The fourth floor of the Lind building will be used for their talking machine business exclusively and on which will be two very large handsome sound rooms. The seventh floor of this building will be used for a talking machine recital room exclusively, and concerts will be given frequently. The room is 140 x 60 ft. M. S. Kopf is manager of this department, and states that while the firm's talking machine business has been good it will be largely increased in the new location. They have taken on the Edison, and will now sell both the Victor and Edison machines. They will also add two more salesmen.

POUPLAR ROCKFORD CABINET STYLE.

One of the popular styles of cabinets made by the Rockford Cabinet Co., Rockford, Ill., is that illustrated herewith. It is finding a rapid sale



by reason of its convenience, finish and appearance. It can be sold at a price which will afford a profit to the dealer "pushing" talking machine cabinets.

O. Heineman, general manager of the Carl Lindstrom & Co. plant, one of the largest talking machine factories in Germany, Berlin, sailed from New York, August 24, on the "Kaiser Wilhelm der Grosse," the North German Lloyd express steamer, for Bremen. He has been here for a month, more on pleasure than business, and expects to come back in the early fall. P. Kretschmer, manager of Lindstrom & Co.'s American branch, went to Europe August 14, on the "New York" of the American Line. He will also return later.

Two special big hits—"I've Got Rings on My Fingers," No. 5737 (Blanche Ring in "The Midnight Sons"), and gems from "The Beauty Spot," by Victor orchestra, No. 31,745, were specially announced by the Victor Talking Machine Co. to go on sale with the September supplement on August 28. These two numbers are said to be enormously popular.

Thousands of People

would purchase Talking Machines were it not for the racking noise, the scratch and deterioration of records.

FIBRE NEEDLES alone can and *will* bring these customers to you.

These Needles possess a charm of reproduction unknown and unobtainable by any other means.

They produce *PURITY, SWEETNESS* and *ELEGANCE* of tone and quality.

They cannot injure the records and are absolutely *NOISELESS* and *SCRATCHLESS.*

Why not reach out for your share of these thousands?

"B.&H." Fibre Manufacturing Co.

33 W. Kinzie Street CHICAGO, ILL.

Let us fill your Fall order

You can be sure that every item you call for will be in the shipment, and that the goods will be shipped on the same day that we receive your order.

There's no need for you to worry and fret over some jobber you can't depend on, for fear he won't send your stock on time.

We have large quantities of everything in the Victor line right here in our warehouse—Victors, Victrolas, Victor Records, cabinets, horns, fiber cases, needles, accessories and extra parts—*we* never have to "send to the factory" to finish out an order.

More than that. *We* handle nothing but Victor goods. *We* know our business thoroughly. *Our* employes are all quick, skillful and accurate. Therefore *we* very seldom make a mistake.

Whether your order amounts to a hundred dollars or ten thousand dollars, it will have our best attention. We count every one of our customers the "biggest." You won't be charged an extra cent for all the care and thoughtfulness which we give to your order, either. We couldn't do it even if we wanted to.

What we want to do is to prove to you that our service is better than what you thought was best. And we know that if you once order from us, you won't leave us in a hurry.

We guarantee promptness, accuracy and perfect satisfaction to you.

Write to-day for our catalogues, particularly our handsome booklet, "The Cabinet That Matches." And ask us for suggestions about your Fall stock, if you care to. We'll be glad to serve you in every way possible.

INDIANAPOLIS HAPPENINGS.

Jobbing Business in Indiana Shows Marked Improvement—Columbia Machine Used in Automobile Advertising at Races—Indiana Phonograph Co. Report Good Edison Demand—What Records Are Selling Best—Close Moving Picture Shows on Sunday—Talking Machine Cures "Cussing"—Other Items of Interest Worthy of Record Here.

(Special to The Talking Machine World.)

Indianapolis, Ind., Sept. 2, 1909.

The talking machine business remains about the same in Indianapolis as to volume. Some dealers report that the jobbing trade throughout the State is getting better and others say that it is the retail trade in the city that is improving. But be that as it may business is remaining about the same.

The Overland Automobile Co. put out a unique advertisement during the week of the automobile races at the Indianapolis Speedway. The advertisement was presented with the aid of the Columbia Phonograph Co. and Gertrude Hassler, of Detroit, who has a fine contralto voice. She sang a song entitled "Overland My Overland" to the tune of "Maryland, My Maryland" and made a record which was placed in a Twentieth Century Columbia. The machine was then placed on an automobile and the record was played for the crowds out at the speedway. The record was clear and entertaining. Many who heard it expressed the opinion that Miss Hassler could do worse than take up record making.

The Indiana Phonograph Co., who handle Edison machines, are enjoying a better jobbing business out in the country, but there has not been much improvement in the city business, the proprietors say. The best selling records last month with this company were "Blue Feather," a duet, and "I Will Sing of My Redeemer," a quartette.

The Indiana Co. are having the best run on the Home machines, which sell at $40. There is not such a demand now for expensive machines and cabinets.

Mr. Devine, manager of the Columbia Co.'s store, reports that the best selling records last month were "Pony Boy" and "My Wife's Gone to the Country." The demand for Fonotipia records keeps up at the Columbia Co.'s store. "The artists who make the records for the Fonotipia Co. are eminent in their respective domains," said Mr. Devine, "and the public is gradually finding this out."

Indianapolis talking machine dealers are getting ready for the state fair. The Columbia Co. will have one of their new library table Columbias on display at the fair.

The Kipp-Link Co. are fully settled in their new home in East Washington street, and are taking care of a satisfying jobbing business.

W. H. Frame will open a moving picture show at 35 South Meridian street, and will use a Twentieth Century Columbia on the outside.

Moving picture shows of Indianapolis were closed for fair on the last Sunday of August. Some time ago the Pure Milk Commission made arrangements with the three Sutherland theaters and the Orpheum to have an educational series of pictures run for the benefit of the babies. One of the stipulations was that these shows were to be allowed to remain open on Sunday. On the last Sunday in August, however, nearly all of the moving picture shows were opened. The mayor was out of the city on his vacation, so Jesse Pavey, his secretary, heard of it and ordered the police to close all of the places. There was no refusal on the part of the moving picture showmen, and H. E. Shaw, manager of the Sutherland houses, said it was not probable that there would be any attempt to open the theaters on Sunday. "I cannot understand though," he said, "why the police should discriminate between the five-cent theaters and the saloons. The people seem to clamor for the five-cent theaters."

One of the strangest talking machine stories that has ever reached the trade in Indianapolis has just floated in from Vincennes, the oldest city in the state, or at least about the oldest. It is a story of James H. Adams, a Vincennes newspaper man. As the story goes, and some of the best known men in Vincennes vouch for the truth of it, Adams was much discouraged last fall when Congressman James E. Watson was defeated for the governorship in Indiana by Thomas R. Marshall, now Governor. Mr. Adams had in his office a talking machine which he used for dictating letters. When he heard that Watson had been defeated he opened up the machine and began to cuss. He cussed up two or three records and then he put the receivers up to his ears and listened to the phonograph do his cussing. He liked it pretty well. But after he had listened to it two or three times he thought maybe he had better quit cussing. Then he got another record and dictated a statement into it that he would never lose his temper again and would never utter even a small cuss word. Then he locked the records up where his stenographer could not find them. A few days ago he dug up the records and called in some of his friends and let them listen to the performance. Then he burned the records.

THE VICTOR TRADE-MARK.

A Most Convenient Vehicle for Illustrators for the Daily Papers.

The famous Victor trade-mark "His Master's Voice" has furnished more ideas for the caricaturists than any other single trade-mark in the world. It has been used in almost every possible way and now it has even been Harrimanized.

TO-DAY THEY HEAR THEIR MASTER'S VOICE

When Harriman returned to these shores last month a clever Mail and Express artist sketched the above in order to portray the market conditions when the great railroad manipulator reached these shores.

CROMELIN TAKES CHARGE IN LONDON.

J. B. Cromelin, recently appointed as general European representative of the Columbia Phonograph Co., General, succeeding Frank Dorian, with headquarters in London, Eng., is spoken of as one of the brightest men in the business. He is a son of R. F. Cromelin, deceased, one of the pioneers in the trade, as an associate of Edward D. Easton, president of the company, and a nephew of Paul H. Cromelin, vice-president, and is only thirty years of age. J. B.'s first experience was as typewriter in the Washington, D.C., office of the Columbia Co.; in succession he became private secretary to President Easton; then located in an important position at the company's Bridgeport (Conn.) works; assistant to Frank Dorian, when a manager of one of the domestic branch offices, finally becoming connected with the branch in Berlin, Germany, four years, two of which he was assistant to his uncle, Paul H., in charge at the time.

FROM OUR EUROPEAN HEADQUARTERS

69 BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

TRADE HAPPENINGS IN LONDON.

The Talking Machine Trade Is Steady but Rather Quiet Except the Demand for the Cheaper Products—Future Prospects Excellent—Increase in Disc Record Demand—New 200 Thread Record Saves Cylinder Business—Improvements Looked for Soon in Disc Records—Copyright Question Still Being Warmly Discussed—Associations Pass Resolutions on the Subject—New Clarion 200 Thread Disc—400 Thread Hinted at for the Future—Fraud Charged in Floating of Sonogram Stock—What the New Record Lists Have to Offer—A New Hornless Machine—Growth of the Colonial Trade—Fast Mails Help Business—Caruso's Successful Tour—French Government Buys Edison Machine for Use in the Soudan—Other News.

(Special to The Talking Machine World.)

London, E. C., Sept. 5, 1909.

Talking machine business has been fairly steady during the last few weeks, but quiet for all that, especially in the cheaper class products. With the passing of August, however, it may safely be said that the future holds nothing but good prospects for the season which should open up in real earnest towards the end of September. What the possibilities are for any particular class line of product cannot be foretold with any degree of accuracy, but there certainly is a strong leaning over towards the reliable and better class goods, which is more than demonstrated by the closer care exercised by traders in excluding articles of an unknown quantity. In the record field the disc is an ever-increasing factor against the cylinder sales, which during the last few months have been at a very low ebb, and indeed if it was not for the 200-thread records we should say this side of the business was on its last legs. The popularity of these wonderful records, however, has saved the situation, and without doubt they will monopolize the greater part of the cylinder trade of next season. We shall then have on the market three makes—the Amberol, Crystal and Ebonoid, retailing at different prices, which here at any rate is the essence of competition outside the value of artists.

Improvement in Disc Records.

The disc record seems to offer equally unlimited scope for improvement as witness the remarkable issue of a 200-thread, phono cut, five-minute, double record, referred to elsewhere. The extraordinary even tracking of the sapphire in such confined sound grooves is almost beyond comprehension, and the beautifully natural tone obtained reflects a perseverance and inventive ability demanding our heartiest congratulation to the officials of the Clarion company. This record marks a new era for the disc industry and no one can question that it is the greatest and best achievement the talking machine trade has seen during the past ten years or more.

Indestructible Cylinder Record a Factor.

The Indestructible cylinder record is to be a factor in this season's trading and there can be no question that a bright future is in store for a good indestructible record, combining smooth surface, quality of tone and the right kind of selections.

Musical Copyright the Issue.

Like every other question, this one of a suggestion to levy a tax upon talking machine records and perforated music rolls is not without its just view from either side. On the one hand the publishers claim that by the issue of copyright music on records their sales of sheet music suffer and as a consequence the copyright committee is in conference to determine the equity of these demands. On the other hand, we claim as representing the interest of the talking machine and record trade, that sheet music sales rather benefit than otherwise by the wide publicity given through the distribution of records, and therefore the attitude adopted by the publishing fraternity is of a sentimental nature only.

In support of our contention one of many facts stands out prominently and it is this: If harm to the publisher is really the outcome of the issue of a particular record, why in the light of common sense do these publishers continually send copies of each month's issue of music to the record makers? The object is obvious, they want the benefit of talking machine publicity to popularize their music or songs. It is even being done now. Only last week the firm of J. E. Hough, L., received six pieces of music from a large publishing house, with a letter requesting early publication on records. In the face of this and many other instances I could quote, does it not seem like an attempt to extort money under false pretenses? To finally and definitely settle the distinct issue whether or not the issue of records is beneficial or harmful to copyright owners, Mr. Hough, as reported last month, has made the following valuable suggestion to the copyright committee: "That the Gramophone Co. be asked to supply the committee with the names of songs sung by such eminent singers as Caruso, Melba, Patti, etc., and the dates they were issued to the public in the shape of phonograms. Let these dates be supplied to the respective composers or publishers and ask them to give a list of the sales in sheet music of each for six months prior and six months subsequent to such publication of the phonograms." Here we have a close challenge which the other side, who are so strongly represented on the committee, have as yet failed to take up.

The following important resolution was passed at a recent conference of the councils of the Pianoforte Manufacturers' Association, L., and the Music Trades' Association of Great Britain: "That this conference is opposed to the creation of monopolies in respect of copyright in player music rolls and gramophone discs. That a copy of this resolution be sent to the London Chamber of Commerce, and to Lord Gorel, representing the Board of Trade. A further extended sitting of the Board of Trade Copyright Committee was held at the beginning of August when many further witnesses representing both sides were examined. President Dyer probably gave evidence, as was his intention, but we cannot obtain definite information on this point.

Beka Co.'s Opera Records.

Ever to the fore with all the latest, the Beka company in their October list promise records from the three popular comic operas, "Our Miss Gibbs," "The Arcadians," and "The King of Cadonia," two selections from each.

A Clarion Triumph!

One of the new departures by the Premier Manufacturing Co., as foreshadowed in my last report, will arrive at a state of finality by the time these lines appear. For some time past we have heard of an impending 200-thread disc and Mr. Seymour has even hinted at the possibility of 400 threads to the inch, but that by the way. What we are most concerned with at present is the forthcoming issue of a Clarion 200-thread phono disc—double-sided. The first list contains 12 selections, many of a high class character, some of which are "Soldiers Chorus from Faust," "La Reine de Saba," "Excelsior," "Dollar Princess," "The Moon Has Raised Her Lamps Above," "Sunday With the Troops," "By the Suwanee River," etc. These records are 10-inch, double-sided and each selection plays for five minutes. The price is not yet decided, but the figure is to be a very competitive one. Complete songs are given on many of the records. As regards volume of tone it is slightly less than the ordinary record, but this is a good advantage. The tonal quality of the instrumental selections is excellent, while the vocal records are characterized by clear and distinct enunciation. This new Clarion record represents a distinct triumph for the Premier company, and is an achievement of quality never before obtained in this industry.

place here, and it is this: The sale of phonocut discs has in the past and is now suffering very materially from the lack of the necessary means whereby to play them. There are suitable sound boxes on the market and interchangeable connections, but somehow or other we don't hear much of them—probably because they are not much advertised. It is useless to put the cast before the horse and we trust those most interested will bear this more in mind than was the case last season.

In Trouble Over Sonogram Co. Stock.

David John Rees answered a summons at Bow Street Police Court on a charge of having made a certain false statement in a statutory declaration relating to the floating of the British Sonogram Co., L., of which he was a director and secretary. For the prosecution, Mr. Travers Humphreys said the minimum subscription on which the company would go to allotment was fixed at £5,000, payable in cash. The list of applications remained open until April 15, 1907, and on that date the defendant reported at a board meeting that applications had been received for the minimum subscription of 5,000 preference shares, and it was therefore agreed that the allotment should be made. As a matter of fact only £136 had been received by that date in respect of 1,360 shares, and the defendant allotted to himself and his nominees the necessary number of shares to make up the 5,000. He afterwards, said Mr. Humphreys, filed a statutory declaration to the effect that the conditions required by law had been complied with and that he himself had taken 1,000 shares, in respect of which he had paid an amount equal to the proportion paid by the other subscribers. As a fact, however, he had paid nothing. Upon that declaration a certificate was granted by the registrar, entitling the company to start business. The defendant afterwards drew £91 10s. of the moneys of the company for his salary, which he never would have been entitled to draw except for the false declaration.

It was also alleged that the defendant obtained by false pretenses £300 paid to the company by Harry Walsh-Lee. Mr. Arthur Newton, who defended, intimated that the defendant would elect to be tried by jury. The proceedings were then adjourned.

New Piano and Moving Picture Combination.

Max Olitzki has just patented an invention which is arousing great interest on the Continent. It is a device whereby a combination of the film and piano recording is effected. Thus any selection recorded on a perforated music roll will also, as on a bioscope, show the exact movements of the player's hands and body. By this ingenious invention enthusiasts can in their own home now see and hear their favorite composer perform his own works. Wonderful indeed!

End of Universal Talking Machine Co.

The Universal Talking Machine Co., L., of London, has been wound up.

Some Fine New Clarion Records.

Some fine records obtain in the September list of Clarion cylinders. Those to hand are "El Capitan," by the Premier Military Band; "Ciribiribin" waltz, and "Cinderella," by the Bijou Orchestra; bagpipe solo, "The Cock o' the North," by Major Forsyth; Xylophone solo, "Let 'im Go," by George Lennox; Bell solo, "Noontide," by Will Hopkins; "Take a Pair of Sparkling Eyes" and "My Dreams," both sung by Vincent Hards; "Sweet Adeline"; "Save a Little One For Me," and "Boiled Beef and Carrots" are two good comics by Mr. Denton; "Bonnie Leezie Lindsay," by Jock Walker.

Selfridge's in Hot Water Over Price Cutting.

Messrs. Selfridge's, the great new Americanized store in Oxford street, London, are getting into hot water with the pianoforte trade owing to price-cutting. A number of dealers recently visited the store to ascertain the names of all the piano firms there represented, and these firms the dealers have decided to sever business relations with. We have every reason to believe, however, that the standard talking machine prices are well maintained.

Parliamentary Report on Cinematograph Bill.

The cinematograph bill dealing with the enforcement of safeguarding methods against fire has passed through committee. Objection was taken to the name by Mr. T. M. Healy, who remarked that some ass ten years ago took a word from the Greek and gave the name to this abominable instrument. He thought the House had some other more important business on hand than to pass this fancy sort of thing; it was a jackassing business!

New Model Eufon Hornless Machine.

A new model of the Eufon homeless machine was recently shown to me by Mr. Vogel. It is styled the "Eufonette," and being smaller than the Eufon, sells at four pounds fifteen shillings, in either oak or mahogany. The Eufonette is now supplied with tone arms to play vertical, and hill and dale cut records, according to requirements.

Possibilities of Colonial Business.

Mr. Edgar Samuel is due home this month from South Africa. The principal trade centers were visited and much new ground has been opened up. Messrs. Barnett Samuel & Sons, L., report that the trip was altogether a success and their representative found that many firms who had hitherto dealt elsewhere, were only too pleased to confine their trade to the mother country on proof of satisfactory demonstration that goods of the right description and style at competitive prices were to be had for the asking. Messrs. Barnett Samuels are showing a keen desire to meet local requirements in all our col-

onies and in this direction I am able to advise Canadian traders that a representative will shortly visit the principal towns of the Dominion with the object of surveying the ground to study local conditions and generally interest Canadian dealers in B. S. & S. products. The Australian market is also to receive close attention and other countries will be visited in turn.

We wish this worthy example of enterprise would be emulated by other English houses, since there is ample evidence that the bond of relationship between the mother country and her colonies becomes closer as time goes on in both a political and commercial sense, and it is with the utmost confidence that we recommend a moderate outlay in publicity through the columns of this journal as one of the best means to build up a good colonial trade. The business is there, but you have to seek it!

Gramophone Records for September.

The new September gramophone records comprise the usual varied selection of good titles and are as follows: "Country Dance, No. 4" (Cowen), and "Ballet Egyptian, No. 4" (Luigini), by the Band of H. M. Coldstream Guards; "In the South," overture (Elgar), La Scala Symphony Orchestra; under concert music, "The Death of Nelson," a spirited rendition by John Harrison; "Love, Could I Only Tell Thee," and "Love in Her Eyes Sits Playing," by Mr. Evan Williams; "Young Tom o' Devon," and "The Gilded Popinjay," by Mr. Peter Dawson; "How Lovely Are Thy Dwellings," by Miss Percival Allen; "O Don Fatale" ("Don Carlos"), Verdi, and "Mon Coeur S'ouvre a Ta Voix" ("Samson and Delilah"), Saint-Saëns, are two especially fine airs well sung by Mdme. Kirkby Lunn; while "The Children's Home" is sympathetically rendered by Miss Palgrave Turner. There are two humorous songs by popular artists, "Jean McNeil," by Harry Lauder, and "Both Laugh," George Robey. Of instrumental we have several good selections —violin "Chant de Veslemoy" and "Norwegian Dance," both on one record, by Miss Kathleen Parlow, who also plays another delightful record entitled "Moto Perpetuo" (Paganini); 'cello, "Chants Sans Paroles" (Tschaikowsky), by Louis Hamburg; piano, "Paraphrase de Concert" ("Rigoletto"), Verdi-Pachmann, executed with considerable credit by Herr Vladimir de Pachmann, who plays Chopin's "Etude" in an equally impressive manner; and last, but one of the best is "Eu Cadinant" (D'Ambrosio), by the popular Renard Quartet, which completes an exceptionally good list that all traders should interest themselves in.

Some Special Gramophone Offerings.

A batch of new literature is just to hand from the Gramophone Co., which announces the issue of a number of interesting records from "Our Miss Gibbs," "Dashing Little Duke," "Persian Princess," "The Arcadians," and lastly, but not least, four new records by Madame Tetrazzini—two of Tosti's songs and "Ah! Non Credea" from La Sonnambula, and "Cavatina" (Les Pêcheurs de Perles). These records make an opportune appearance in view of Madame Tetrazzini's forthcoming concert tour throughout the Kingdom.

A 300 Mile Motor Trip

Was the experience recently of Mr. Hallet, the popular sales manager of the Premier Manufacturing Co. Starting from London, Mr. Hallet touched all the principal towns en route to Norwich and back. He found this the most practical way of reaching the various centers, and visiting traders, especially those located on the fringe or outskirts of good towns. The journey from a business point was highly lucrative.

Caruso's Successful Tour of the Provinces.

Signor Caruso is on tour throughout the provinces and is meeting with a very warm reception. In Dublin it is said fancy prices were paid to hear him.

Zonophone 12-inch Records Well Received.

The first list of Zonophone 12-inch records has met with a splendid reception from the trade generally and as forecasted last month the quality and tone is all that could be desired. The new Zonophone sound-box with machine is also selling freely. Another season's novelty is a new 10-guinea Zonophone Grand. This is an interior horn cabinet machine, solid oak, 40½-inch high, new Zono sound-box attached, Gibson arm, with high grade double spring motor, etc. The machine is handsome in appearance and presents wonderful value for the money.

London to Berlin Telephone.

The British and German governments have under discussion the possibility of direct telephone communication between London and Berlin via either Holland or Belgium. Telephone lines are definitely arranged for between Madrid and Bordeaux, while the negotiations for a through telephone between Madrid and Paris are well advanced. When the Franco-Spanish communication has been established it may be possible, though with difficulty, to speak from London to Madrid.

Faster Transmission of American Mails.

An appreciable saving of time is noticeable since the mails from New York by the Cunarders were landed and despatched from the new port at Fishguard. The company announce that in future all their homeward bound steamers from New York after September 11 will call at Fishguard, as well as Queenstown. The mails will be carried by special trains direct to London, by which means a saving of quite six hours, if not more, will be accomplished.

Prices Maintained on Favorite Records.

An important announcement is made this month by the International Favorite Record Co. in regard to their September list of records to comprise the issue of 12-inch double sided discs only at the usual price of 4/ per record of two impressions. That the ordinary figure stands speaks well of the high value offered, since the

orchestral selections in this list are all operatic music by the Banda Municipale Verona (44 musicians) and the Favorite Concert Band. Such a list should be in the hands of every live trader.

Beka Co.'s Comprehensive List of Records.

For good music, with plenty of variety, dealers cannot do better than obtain the monthly Beka lists, which contain selections to suit every class of customers. In this direction the Beka current issues are particularly characteristic. The general quality is first rate and I would recommend the following for stock: "Sullivan Memories," selection 1, introduces the "Mikado," "Pirates of Penzance," "Patience," and "Iolanthe"; selection 2: "Yeoman of the Guard," "Princess Ida," "Iolanthe," and "Gondoliers"; "The Chancellor" and "La Victoire" marches, played by the Beka London Orchestra; "Love the Pedlar," Miss Mabel Gregory, "Green Isle of Erin," Miss Emily Moss; "An Evening Song" and "I Know of Two Bright Eyes," Philip Ritte; "My Old Shako," Harry Thornton; "Only an Old-Fashioned Cottage," James Hudson; two splendid violin solos, "Variations Hongroises" and "Austrian Hymn," by Mr. Wm. Henley; "I Want You to See My Girl" (comic), Bert Alvey. There are in addition two of the famous meister records, 12-inch, double-sided, "I Think," and "Tell Her I Love Her So."

To Tour Empire With Choir of 200 Voices.

With a British choir of 200 voices Dr. Henry Coward, the famous conductor, is expected to make a six months' tour of the British Empire, covering Australia, New Zealand, Canada and South Africa, etc. The date of departure is not yet fixed, but probably it will not be for some time ahead.

The September Zonophone List.

The September Zonophone list contains the usual goodly fare, the following records being especially worthy of mention: Tenth Grand Opera Record, the stirring scene from Act II of "Faust," is sung by a full operatic chorus, accompanied by orchestra, while the Black Diamond Band gives another excellent selection from the same opera; "Vision of Salome Waltz" by the Bohemian Orchestra; "Take a Pair of Sparkling Eyes," Ernest Pike; "The Bandolero" and "The Village Blacksmith," Peter Dawson; "Watchman, What of the Night?" duet, Ernest Pike and Peter Dawson; "The Referee," Harry Lauder; "Way Down in Alabama," Collins and Harlan; "Sleep and Forget" (cornet), C. White; "The Follies" (concertina), Alexander Prince.

Phonograph for Workhouse Infirmary.

Braintree Board of Guardians are to purchase a phonograph for use in the workhouse infirmary. One of these instruments recently presented is said to have produced in some cases successful "music cures" by brightening the hours of the patients.

The October "Twins" List.

The October "Twins" list is one of the finest yet issued.

Universal Tempo for Waltz Music.

At the second congress of the International Union of Dance Teachers, held at Scheveningen, Holland, it was unanimously resolved that the universal tempo for performing waltz music for dancing shall be sixty beats to the minute. It is hoped this will settle the disputed point as to what is the proper time at which waltzes should be danced.

Edison Machines for the Soudan.

Through the Paris office of the National Phonograph Co., the Colonial Office of the French Government were recently supplied with a "Home" phonograph, accessories and a quantity of blank records. This outfit was intended for use in a political expedition to the Soudan (West Africa), undertaken by Governor Monsieur L. Richaud. The results of this enterprise have been much paragraphed in the French newspapers and we are pleased to be able to publish a copy and translation of Monsieur Richaud's letter, in which he expresses his satisfaction at the excellent results obtained from the Edison phonograph:

"The Governor Léon Richaud
"Head of the Mission of Delimitation Franco-Libérienne.

"To the Director of the Compagnie Franc, du Phonographe, Edison, Paris.

"In reply to your letter of June 29th, which I received through the Colonial Office, I have the pleasure to inform you that the Edison Phonograph furnished to the Franco-Libérienne Mission has given every satisfaction.

"In spite of the articles being badly handled in transport and the changes of temperature, the apparatus and cylinders have nevertheless worked perfectly.

"We have been able to make some records in the course of our travels, which I have sent you, so that you can convince yourselves of the results obtained.

"Yours very truly,
"(Signed) L. RICHAUD."

The records which Governor Richaud secured are composed of speeches by the chiefs of the native tribes, expressing their submission to the government, orchestral selections by native bands played with different instruments made of ivory, wood, etc., brass cymbals, etc., manufactured by the natives themselves. There are also native songs and instrumental solos which to the uninitiated do not appear to be especially harmonious. Although the recording is done on ordinary Edison blanks, the various items reproduce with marvelous fidelity. The reason for this, as Governor Richaud explained to the writer, must be attributed to a great extent to the silence and the excellent acoustics pervading in the large forests of that country.

Governor Richaud will hold a conference about his expedition at the Geographical Society in Paris during this month and will give an exhibition of the records he has made, which doubtless will prove highly interesting.

Summer Enterprise.

Most residents in towns where the great piano firm of Crane & Sons, L., have an establishment are familiar with the presence, among other window decorations, of the symbolic models of a full-sized crane, standing erect in all the pride of its height and stately attitude.

The Birmingham establishment in the Old Square have utilized these models in a very smart manner during the last few weeks in the preparation of a special window show of "Twin" records.

The window is dressed with a full assortment of the "Twin" records and "Twin" show cards and literature, and in the center stand two of these tall cranes, representing twin birds, holding in their beaks a length of ribbon, on which is suspended a Twin disc record.

The effect is excellent and is duly appreciated by the crowds who gather daily outside Messrs. Crane & Sons' emporium.

Popularity of Stroh Violins.

A musical novelty which has for some years past received the support of eminent musicians is the "Stroh" violin, the invention of Mr. H. Stroh, the prominent scientist, now manufactured solely by Mr. Geo. Evans of 94 Albany street, London.

In conversation with your representative Mr. Evans emphasized the growing demand and usefulness of the Stroh violin for many purposes. It is largely used for recording and on account of its extraordinary properties of tone and quality it has claims upon amateurs and professionals alike which cannot be ignored. The tones are rich, mellow and deep, and its volume is at least three times that of the ordinary violin.

The STROH VIOLIN

¶A new instrument possessing a VIOLIN TONE of great beauty and remarkable power, which will appeal to all music lovers.

¶The Stroh Violin being scientifically constructed will withstand the varied temperatures of the tropics, where the ordinary violin is useless.

¶Musical Instrument Dealers and others interested should write for free descriptive booklet to the Sole Maker.

GEO. EVANS
(Successor to CHAS. STROH)
94 Albany St., Regents Park, London, Eng.

An illustration of this invaluable instrument is given elsewhere. Record makers and musical instrument dealers interested can have a free descriptive booklet on application to Mr. Evans.

AN INTERESTING DECISION

Handed Down by Supreme Court of Germany to the Effect That Talking Machine Records Do Not Infringe Rights of Composers.

A very interesting copyright decision has been handed down by the Supreme Court of the German Empire, being to the effect that talking machine records do not infringe the rights of the composer in any sense. This decision, coming as it does from the highest court in the empire, cannot but prove of interest to the talking machine trade throughout the world.

Under section 1 of paragraph 22 of the German copyright law of June 19, 1901, which is still in force, the reproduction of copyrighted musical compositions is permitted when made by means of discs, cylinder, music rolls and similar parts of mechanical musical instruments. The freedom of reproduction is given, whether the parts are interchangeable or made a permanent part of the instrument. Section 2 of the same paragraph makes a distinction, however, between different instruments, and the freedom to use copyrighted music is denied where the performance, in so far as loudness, duration of tone and rhythm are concerned, can be reproduced in the manner of a personal interpretation. At the time the law was passed it was clearly understood that this exception did not relate to talking machines, but referred exclusively to those piano-playing devices where a personal interpretation was possible.

Nevertheless, suit was entered some time ago in Germany against the German Graphophone Co., of Berlin, by the owner of the copyright and performing rights to all compositions by Rudolf Waldmann, the complaint particularly covering what was alleged to be the unlawful use of the composition "Sei gegrüsst du mein schönes Sorrent" (poem by Heise) and of the music of the light opera "Incognito." The plaintiff demanded discontinuance of the manufacture and destruction of all records made besides damages to the extent of 3,000 marks. The Court of First Instance (Landgericht) decided in favor of the plaintiff. The Court of Appeal (Kammergericht) dismissed the complaint, overruling the decision of the Landgericht, and now the Supreme Court of the Empire (Reichsgericht), to whom a final appeal was made, has affirmed the decree of the Kammergericht, holding that the phonographic reproduction is purely mechanical, and is, therefore, not a violation of the rights of the copyright proprietor. The court in a lengthy decision discusses the various phases of the case. It holds that the phonographic record cannot be considered other than a mechanical reproduction, so far as variation in rhythm, duration and strength of tone are concerned. The style of the record is fixed by the artist who makes it, and as long as the matrix remains in existence the reproduction from the record made will be as made in the first place. The bill was dismissed and the plaintiff ordered to pay the costs of the proceedings.

TO SAVE TIME ON EUROPEAN MAIL.

Letters for Outside City to be Sent from Liners Direct to the Depots.

(Special to The Talking Machine World.)
Washington, Sept. 3, 1909.

An important change just made in the ocean mail transfer service in New York harbor will result greatly in expediting foreign mail to its final destination in the United States. An order has been issued by Postmaster-General Hitchcock to have clerks on the liners separate all bags of mail for the interior of the country from those labeled "New York City." Hereafter two transfer tenders will meet each incoming liner at Quarantine. One will take all bags labeled for the interior and rush them direct to the various stations, and the other will handle the bags for New York City.

Under the old arrangement all the bags were transferred to one tender and taken to New York.

EDISON GREATLY PLEASED.

Over the Discovery of the North Pole by an American—Descants on the Great Scientific Discoveries Made During the Past Year—Discusses Other Subjects.

Thomas A. Edison, the inventor of the phonograph and grand master of electrical invention and research, was as pleased as a schoolboy who had secured an unexpected holiday, over the discovery of the north pole by an American, and exclaimed, "Well, well! That's a great thing. And the best of it is an American is the discoverer. Isn't it wonderful what this country can do? Peach of a country, isn't it? You bet it is, and the man who doesn't think so ought to be kicked out."

It was in the congenial environment of Briarcliffe Lodge during his recent visit that the Wizard of Menlo Park expressed the opinions above quoted, and discussing the scientific sensations and discoveries of which all the world is now talking, he said further:

"This year has certainly been a very good one from a scientific point of view. Look at what it has witnessed in the successful employment of the aeroplane, the dirigible balloons, the improvement in wireless telegraphy and other things that must seem marvelous to those not engaged in scientific research. Yet these things

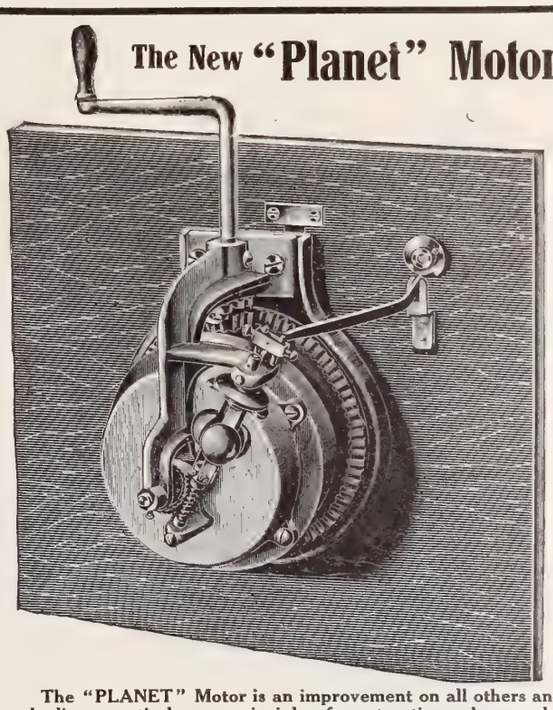
The New "RENA" MACHINES

"RENA" MACHINE, No. 4, £5 10s.

Cabinet: Solid Oak, size 16 in. by 16 in. by 8½ in. Fitted with "PLANET" 16-minute Motor. Self-regulating SPEED INDICATOR. Nickeled Aluminum TAPERED TONE ARM. Improved Sound Box, fitted with Patent Needle Clip.

Prices range from £2 10s. to £11 10s.

The New "Planet" Motor



The "PLANET" Motor is an improvement on all others and embodies an entirely new principle of construction. As may be seen above, the gearing is horizontal, running parallel with the turntable and so minimizing friction. All the gearing is encased and runs in a GREASE BATH. It is DUST-PROOF, therefore always CLEAN and SILENT-RUNNING. It is also CLIMATE-PROOF. So simple that there is nothing to go wrong. All "PLANET" Motors are guaranteed. "PLANET" Motors are fitted to "RENA" Machines from £3 10s. upwards.

The Life of a Talking Machine is its Motor

"The Motor That Runs In Grease."

are not marvels. They are the merest trifles in comparison with what we ought to have accomplished, what we hope some day will be accomplished.

"Notwithstanding all we have done, we are in the infancy of our power to fathom the depths of nature and to learn her secrets. We are groping, but although in the dark we shall unravel, little by little, the mysteries of the unknown.

"The trouble is our senses are limited to five. Oh, that we had one hundred! At present we cannot comprehend one-millionth part of the hidden resources of nature. We never discover anything until the force that is responsible for it has come in contact with something that has produced light, or heat, or sound, or something we can either feel, or see, or hear, or taste, or smell.

"That accounted for the discovery of the Roentgen ray, which in turn led to the discovery of radium.

So far as concerns the discoveries and evolution of scientific projects that have been witnessed this year, undoubtedly the most important up to date is the conquest of the air. But, although many forms of aerial machinery have been devised, aviators have a long road to travel before they attain perfection. Until they have learned the secret of the vulture they cannot say they have mastered the art of flying.

Buzzard May Reveal Great Secret.

"When I was in Florida last year I noticed these turkey buzzards, or vultures, perform all kinds of evolutions in midair without the quiver of a feather or the assistance of any breeze. They rose and fell, floated or glided at pleasure, apparently without exertion. How they did it I don't know, but I do know that until the secret has been learned by man the conquest of the air will not have been completed.

"Still the fact remains that the aviators have forged the first link in the chain that will hold the key to this problem. I am convinced that in the near future some form of aerial machine will be employed for commercial purposes. It doesn't take long after an invention has once been made public for persons other than the inventor to improve on it. Progress from that point is extremely rapid. Probably the first use of the aeroplane will be the carrying of the mails.

"Taking that into consideration—the rapid advance in aviation—it is well, perhaps, for the honor and glory of the mariner and the terrestrial traveler that Dr. Cook captured the pole when he did. Otherwise the prize would probably have been wrested from them by a navigator of the air.

"Although this year has been noteworthy in respect of scientific progress, that progress, it must be borne in mind, has been more spectacular than solid in its results. The great and really useful inventions are yet to come. These will take the form of discoveries that will lift the 'submerged tenth' to the level of his fellow man. In other words, they will 'jack up' the workingman by providing automatic machinery that will perform all the menial tasks and thus compel him to fit himself for something better. Other inventions will provide pleasant and sanitary homes for the rental that is now paid for an unhealthy, dirty, dark tenement. Still others will reduce the cost of decent living to a minimum by detecting fertilization that will make fifty crops grow where one is yielded now.

Thinks There Is a Surplus of "Highbrows."

"Too little attention is paid to the elevation of the workingman. Our present condition of society is topheavy. We are overburdened with 'highbrows.' We have too many lawyers and professors and academicians. We have too much of the so-called 'higher education' and too many unread libraries. Nothing delights me more when I cross the ferries than the sight of the large number of workingmen reading newspapers. The newspapers constitute the great democratic library from which most of us can derive our education.

"The workingman doesn't want charity or professional philanthropy. That's all punk. He wants to be, and he has a right to be, as independent as the proverbial 'hog on ice.' The moment you offer him something for nothing he becomes suspicious. I know that because I am a workingman myself. Give him value for his money, but don't build a house at a cost of $3,000 and sell it to him for $1,000. That's punk, too. Build a house at a cost of $1,000 for material and labor and sell it to him for $1,200, so that the builder gets a reasonable profit and the purchaser gets the worth of his money.

"In that connection I may say that I have almost finished my mold for a cement house that can be rented at less than is paid for the cheapest of flats in the crowded tenements of New York."

"Why not pour cement warships?" asked one of Edison's cronies jokingly.

"Why not?" retorted the inventor, with a twinkle in his eye. "They would be much cheaper than steel, and if they were lost all you would have to do would be to pour a few new ones. If you are going to war why not have twenty or a dozen molds and pour out a cement fleet whenever you needed one? But, joking aside, cement is going to be a much greater factor in the affairs of life than it is at the moment."

Cook Shows What American Pluck Can Do.

Reverting to the discovery of the pole and the inventions of the year, Edison said:

"I do not know that Cook's work has any particular value from a practical and scientific viewpoint, but it has great value as a demonstration of what American pluck and energy and brains can accomplish, and as a stimulus for others to do something that will make their names as famous and aid their fellow man.

"Aren't we Americans great people? We call ourselves Americans, but as a matter of fact we are not. We are a lot of crossbreeds, and in that lies our power. We are a mixture of the best of Europe, for after all it is only the man who has pluck and determination and brains that decides to emigrate to a country wherein he believes he can improve his condition.

"And doesn't this country afford him the best

chance to do that? Isn't it a wonderful country? I remember when I was a peanut conductor on a railroad out West I used to see immigrants from Sweden and Norway who looked as if they never could be assimilated. Yet in comparatively few years I saw the sons of those men become Senators with every trace of their foreign extraction apparently wiped out.

"Is there any other country on the face of the globe could do that? Isn't it a peach of a country?"

CARUSO'S VOICE CHARMS MOUSE.

Judge Pardee of Atlanta, Ga., Has Interesting Experience Illustrating Effect of Music on Rodent—Mouse Risks Life to Hear Certain Selections.

A mouse that risks its life every evening, in order to hear Caruso sing, inhabits the home of Judge Don A. Pardee, on Ponce de Leon avenue, Atlanta, Ga.

One of the judge's sources of pleasure after the labors of the United States circuit court are ended for the day is a Victor Victrola, and among the valuable records he has collected there are half a dozen or more which reproduce the marvelous tones of the famous Italian tenor in solos from grand opera. There are also records of the voices of Scotti and Farrar and Campanari and other noted stars of the grand opera stage, but it is the Caruso records alone that attract the musical mouse.

The mouse was first observed drinking in the melody of this voice one day last week. The judge's family and several neighbors were gathered about the Victrola when one of the circle noticed the little rodent peeping from a crack in the corner of the fireplace. Caruso was then singing through the machine, but the significance of this fact did not occur to the observer at the time. A moment later, however, when the great tenor ceased and Madame Schumann-Heink began with the opening bars of "Knowest Thou the Land," the mouse instantly withdrew into the seclusion of its hiding place and remained there until Caruso sang again. Then the observer called the attention of the others to the listening attitude of the mouse in the corner, after which several experiments were tried with the result that the little fellow appeared only when Caruso sang.

When it was clearly established that the mouse's musical inclinations centered solely upon the Italian tenor, other experiments were tried to determine which one of the songs suited him best. "Celeste Aida" was put on the Victrola, but the mouse remained merely listening; then "Heaven and Ocean" was played with the same result. Finally, however, when the superb solo, "Gentle Spirit," from the opera "La Favorita" was put on, the mouse darted from the corner and came squarely out before the assembled crowd. It sat up like a trained dog, cocked its ears forward and gave an excellent imitation of a cultured person enjoying high class music. This experiment was repeated time and again with the same result, so that the party witnessing it was convinced the mouse at Judge Pardee's is infatuated with Caruso's voice and will risk its life any moment to hear him sing "Gentle Spirit."

R. E. Severe, manager of the talking machine department of the Elyea-Anstell Co., Atlanta, who sold Judge Pardee the outfit, vouches for the truthfulness of the story.

HOW BEST TO ATTAIN RESULTS

In the Sale of Talking Machines or Any Other Product—This Subject Discussed by an Expert in This Line.

A well known traveling salesman, in discussing the methods whereby he best attained results, remarked as follows:

"In all my experience of selling to the trade I have found but few that were not ready to say 'No' as soon as I introduced myself. I think that the less introducing a salesman does with himself the better success he will have. I believe in getting busy as soon as I can get the dealer's attention and drive away at my proposition. The dealer knows that his store is the most up-to-date and that his town is the most prosperous west of Chicago. What a salesman wants to do is to sell goods and not be a booster for a Promotion Committee.

"I have always found the plan of having something new a good idea. In handling the ——— line most every dealer when I told him that I had something new would say that he knew the contents of the line, but when I would draw out a new sample from my pocket and get him interested it would give me an opening for the balance of the line. When he had seen the entire line he would say with surprise that he always thought that it consisted of a cheap line of goods. It goes to show that half the dealers think they know more about a line than the salesman who is handling it, and unless a salesman uses tact he will get turned down in most cases, and will be unable to present the dealer the full value of his line."

There is meat in this for talking machine men, as well as all others engaged in developing business.

DITSON CO.'S HANDSOME DEPARTMENT.

The interior decorations of the talking machine department of Charles H. Ditson & Co., New York, are not only in excellent taste, but very handsome. The pea green color scheme with a border of silver and the rich, dark mahogany woodwork and old ivory effects are in elegant contrast. The decorative work was finished last week, and when the new Persian rugs were placed on the floors of the roomy demonstrating booths the other day the general appearance of the department was greatly admired.

Opportunities are going by all the time. Keep your eye out for such as you can use in your business and nab them.

TRADE IN CINCINNATI.

Opening of Fall Welcomed by Talking Machine Dealers—Salesmen Enthusiastic—Cool Weather Aids Record Sales Materially——Piano Players Said to Hurt Sale of "Talkers"—Cheaper Machines Expected to Disappear from the Market—Better Machines Mean More Record Sales—Red Seal Records in Demand—Some Handsome Window Displays—Milner Co. an Active Concern.

(Special to The Talking Machine World.)
Cincinnati, O., Sept. 6, 1909.

September 1 was greeted with a great deal of satisfaction by the talking machine dealers in Cincinnati. The month of August is, undoubtedly, the most unsatisfactory month in the year, from the standpoint of the talking machine dealer. There is hardly a home in the entire city, except in the poorer districts, where at least a part of the family is not absent on a vacation, and it is almost impossible to interest new prospects, except to take advance orders for September delivery.

These orders are now coming due, and a number of talking machine salesmen expect to do more in the first ten days of September than they did during the entire month of August.

The pace they set during the first two days was a very fast one, and if it can be kept up September will certainly be a record-breaker. Every train is bringing in crowds returning from the summer resorts, and conditions will very soon be normal, enabling the dealer to close the large amount of business that had accumulated during the summer.

Talking machine dealers did not expect the season to open until about the 15th of September, but it now looks as though it will start with a rush from the very beginning of the month.

The weather has been so cold that outdoor amusements have not been very attractive, and with indoor amusement the order of the day, the Victor has been in big demand.

As a consequence, record sales have increased very materially, and a large number of machine sales are being made. The instalment trade, which in the past was the backbone of the business, is again coming into evidence, and this with the tremendous new field on the Victor Victrola, will guarantee a busy season to the talking machine dealers.

There is a well defined opinion among talking machine dealers of this city, that the piano player and the player-piano are injuring the trade to some extent. Among all talking machine owners is cultivated a taste for musical entertainment, that they have proven to be good customers for the piano player. A piano player representing, as a general rule, many times their outlay on a talking machine, naturally receives more attention, and as a circulating library can be patronized at an extremely low rate, the talking machine is very often entirely neglected.

Many dealers have expressed the hope that the very cheap talking machine will gradually disappear from the market, as they find that the greater the investment in the instrument, the greater the interest of the owner in same, and the more probability of his proving a record customer. It stands to reason that the $25 machine will be relegated to the storeroom a great deal quicker than a Victor Victrola.

The Rudolph Wurlitzer Co. report a most satisfactory sale on Red Seal records. Their first floor salesrooms have proven themselves to be the very thing and are being patronized very extensively. It is a common thing to see every booth occupied by Red Seal buyers, and this in spite of the fact that this firm is doing a large business in selling records on the approval basis, whereby the customer has the opportunity of trying them in his own home without any trouble or extra expense, as the records are delivered and called for by representatives of the talking machine department.

Very attractive window displays are being made by this concern and their newspaper advertising has been very extensive. Their retail department is being attended to by seven salesmen, everyone of whom are old talking machine men, and equipped with a thorough knowledge of the business. As a result that store is enjoying a very good business and is known throughout the Middle West and South as one of the headquarters for Victor and Edison goods.

One of the busiest spots in Cincinnati is the store of The Milner Musical Co., on Sixth street between Vine and Race. This firm has just started on its third year of successful dealings with the music-loving people of this city. They handle everything known in the music line from pianos to talking machine needles. At the time the writer called everyone was busy selling goods; in fact, Raymond Strief, the general manager, had just finished selling a Victrola and a good sized bunch of records to one of Cincinnati's wealthy citizens. The entire sale amounted to over $300 and Mr. Strief had the cash before the outfit was delivered. He is very enthusiastic over the sale of the new Victrola and speaks highly for the future of the talking machine business. The Milner Co. are jobbers of the Victor and Edison lines. Their store is so equipped that one saleslady can handle five record customers at the same time. They have seven individual record salesrooms for the sale of Victor and Edison records, thereby assuring the customers privacy in the selection of their records.

HE CUT PRICES IN VICTOR GOODS.

Max Goldberg Haled to Court by Victor Co.

Max Goldberg (said by the jobbers to be only one of the names by which he is known in the talking machine trade), hailing from the mysterious East Side of New York, was brought into the Circuit Court of the United States, that city, Friday, August 13, to explain to Judge Hough why he should not be punished for contempt of court, and also why a restraining order should not be issued enjoining him from selling Victor machines and records at less than the prescribed price. Counsel for the defense asked for an extension of time, as he had been brought into the case only the previous afternoon. The request was peremptorily denied, with a few caustic remarks by the judge relative to the attitude and peculiar actions of Goldberg in the matter.

Counsellor Pettit, for the Victor Talking Machine Co., stated to the court that a number of attempts to serve Goldberg with the papers had been ineffectual. Finally, when the case was called before Judge Lacombe two weeks before, the defendant had appeared in court in person and without an attorney and declared he did not understand a word of English. The court then granted Goldberg an adjournment for two weeks in which to engage counsel and set the hearing down peremptorily for August 13. Judge Hough was not disposed to be lenient, granting the injunction on the main petition, and adjourning the hearing on the contempt proceedings until the next motion day, namely, August 27. Judge Hough also ordered that notice to defendant by mail would be sufficient. On that date the hearing was set over to September 3, and again to September 17 on account of pleaded sickness.

FRANK DORIAN ARRIVES FROM EUROPE.

On August 30 Frank Dorian, recently manager of the European interests of the Columbia Phonograph Co., General, in Europe, with offices in London, Eng., got into New York on the "Campania," of the Cunard line, with his family. Later he called at the executive quarters in the Tribune building, visiting the various departments under the guidance of Paul H. Cromelin, vice-president of the company.

The laboratory premises formerly occupied by the American Record Co., 241 West 23d street, New York, have been leased for the same purpose by the Sonora Phonograph Co. Geo. K. Cheney is in charge.

Edward N. Burns, manager of the export department of the Columbia Phonograph Co., General, who went abroad with his family in June, is now at Carlsbad, Austria, drinking the waters. He will be home next month.

F. L. DYER RETURNS FROM EUROPE.

The President of the National Phonograph Co. Receives Hearty Welcome—Chats With the World Regarding His Attendance Before the Board of Trade Copyright Commission.

Frank L. Dyer, president of the National Phonograph Co., Orange, N. J., arrived from Europe September 9 on the "Deutschland," of the Hamburg-American line, looking greatly improved by the trip and the rest. He has been abroad with his family since early in July, sailing immediately following his attendance, with Thomas A. Edison, at the banquet given in connection with the annual convention of the National Association of Talking Machine Jobbers in Atlantic City, N. J., July 6 to 8.

At the pier to welcome Mr. Dyer were the officers of the National Co., heads of departments, etc., including the subjoined: Peter Weber, denuded of his whiskers and appearing fifteen years younger, superintendent of the Edison works;

PRESIDENT FRANK L. DYER.

Wm. Pelzer, vice-president; C. H. Wilson, general manager; F. K. Dolber, sales manager; Walter Stevens, manager of the export department; L. C. McChesney, manager of the advertising department; Nelson C. Durand, manager Edison business phonograph department; John Pelzer, of the Edison kinetoscope department; E. J. Dodge, manager, and Wm. Butler, of the Edison storage battery department. Mr. Dyer, looking pleased and contented, was accompanied by Mrs. Dyer and his son Jack, F. L., Jr., having come back alone two weeks before.

After everybody had cordially greeted Mr. Dyer and told him how fine he was appearing and how pleased they were to see him with them again, he had an interesting chat with The World, who was also present to bid him welcome home, regarding his attendance upon the Board of Trade's special committee in London, Eng., appointed by government suggestion, to investigate and report upon the present condition of copyright affairs and legislation helpful thereof, and to the various interests in connection therewith. Mr. Dyer expressed himself substantially as follows:

"Yes, I attended a meeting of the Board of Trade's copyright commission at their special invitation when in London, to explain the new American law and express my opinion in connection therewith and cognate matters. Many questions were asked me by members of the commission during the two hours I was before them. They were favorably impressed with our copyright act, and as the result of their investigations and deliberations will devise and report a bill of a similar nature with their recommendation for its passage. The contemplated measure will thoroughly protect the writers' and composers' right.

"It was evident to me at once that the commission are hostile to reproduction privileges as viewed by the phonographic and other automatic instrument people, the same as the Patents Committee of Congress. They are not quite clear as to how a monopoly in copyright music could be prohibited or prevented. Whether this would be accomplished by means of a minimum royalty charge and thereby creating an open and free market for copyrights, subject to the action of the owner, or in some other way, the commission were not prepared to state.

"The commission do not question the legality of our method. As to the constitutionality of a law like the American statute in this respect, you will remember that Great Britain is not governed by a written constitution, but by precedent and general or accepted usage. Therefore, Parliament is supreme, and such laws as that august legislative body passes are final in a sense of their legality. The courts are subordinate to to Parliament, and there is never any question raised as to an imperial act.

"While the commission will recommend a copyright bill of some kind, and give it their unequivocal indorsement, I cannot say what Parliament will do with it. Of course the Government will take up the bill, endorse and urge its enactment; in fact, that is the only way any legislation can be passed. It requires unanimous consent to pass a new law. My impression is, however, that a copyright bill of some kind will be enacted.

"As to business, though I was on the Continent as well as in Great Britain, I paid little attention to trade affairs. I know that business over there is improving. The recovery from the financial slump is much more rapid than with us. I should say the talking machine business was very good and getting better from what I saw and heard. I had a splendid trip going and returning, had a most enjoyable time abroad and never felt better in my life."

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Sept. 10, 1909.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

AUGUST 11.

Bangkok, 8 pkgs., $175; Cardiff, 50 pkgs., $225; Chemulpo, 8 pkgs., $307; Havana, 2 pkgs., $111; Havre, 59 pkgs., $492; Hong Kong, 43 pkgs., $970; La Paza, 4 pkgs., $144; London, 11 pkgs., $306; 145 pkgs., $3,559; Manila, 31 pkgs., $701; Rio de Janeiro, 34 pkgs., $2,2396; San Domingo, 4 pkgs., $55; Santa Marta, 2 pkgs., $100; Shanghai, 1 pkg., $100; Sydney, 1,735 pkgs., $19,255; Trinidad, 12 pkgs., $188; Valparaiso, 20 pkgs., $435.

AUGUST 18.

Antofagasta, 11 pkgs., $726; Berlin, 13 pkgs., $310; Buenaventura, 7 pkgs., $589; Buenos Ayres, 10 pkgs., $445; 38 pkgs., $1,028; Colon, 3 pkgs., $178; Guayaquil, 6 pkgs., $128; Havana, 18 pkgs., $189; 3 pkgs., $166; 14 pkgs., $619; La Union, 5 pkgs., $160; London, 5 pkgs., $673; 583 pkgs., $4,247; Mazatlan, 3 pkgs., $296; Montevideo, 16 pkgs., $2,785; Para, 5 pkgs., $428; Porto Barracas, 2 pkgs., $123; Rio de Janeiro, 11 pkgs., $214; St. Johns, 82 pkgs., $178; Tampico, 9 pkgs., $666; Trinidad, 5 pkgs., $121; Vera Cruz, $108 pkgs., $2,506.

AUGUST 25.

Berlin, 17 pkgs., $248; Cartagena, 6 pkgs., $711; Colon, 5 pkgs., $123; Havre, 1,007 pkgs., $5,474; Liverpool, 6 pkgs., $750; London, 5 pkgs., $737; 5 pkgs., $614; Mombasa, 2 pkgs., $500; Montevideo, 2 pkgs., $180; Rio de Janeiro, 8 pkgs., $639; Tumaco, 2 pkgs., $111; Vera Cruz, 218 pkgs., $5,931.

SEPTEMBER 2.

Berlin, 4 pkgs., $173; Buenos Ayres, 118 pkgs., $8,972; Cienfugos, 15 pkgs., $1,228; Hamburg, 40 pkgs., $962; Havana, 5 pkgs., $195; Hong Kong, 37 pkgs., $838; London, 3 pkgs., $583; 838 pkgs., $8,634; Melbourne, 1,662 pkgs., $17,004; Rio de Janeiro, 5 pkgs., $156; Tampico, 6 pkgs., $480; Vera Cruz, 92 pkgs., $5,384.

Why not kill two birds with one stone?

It is becoming a regular thing for the heretofore exclusive talking machine dealer to take on a line of small musical instruments.

The two lines make an ideal combination.

As the profit on musical merchandise (100 to 300%) is even greater than on talking machines, you are able at a single expense for doing business, to make more than a double profit.

A surprisingly small investment is required to start a musical instrument department.

If you have never handled the line, we can be of great assistance to you. We will gladly give you the full benefit of our 53 years' experience, and start you in right so that you cannot fail to succeed.

With this in mind, we have arranged schedules of stock, suitable for cities of various sizes, which will give you an exact idea of the size of the stock you will require, its cost, etc.

We suggest that you write for these schedules, and a copy of our large wholesale catalog, and look into the matter a little.

A good fall and winter trade is ahead, and you will make no mistake to act at once.

If you already handle musical goods and do not have our catalog, write for it. We can positively save you money.

The Rudolph Wurlitzer Co.

Cincinnati and Chicago

Jobbers of Victor, Edison and Regina goods. Manufacturers and Importers of Musical Merchandise.

THE COLUMBIA GRAFONOLA LINE.

Important Announcement Showing the Columbia Plans for the Fall—Unique and Handsome Creations Which Will Attract Critical Buyers or We Are Mistaken.

There is a big bunch of Columbia news in this issue of The World and there are announcements which will keep the trade guessing for some time.

The Columbia people have been doing things in the past year and this latest announcement, in the early fall, of the Grafonola line, coming as it does on top of another series of Columbia

THE GRAFONOLA "REGENT."

moves, will keep the trade tongues wagging at a lively pace.

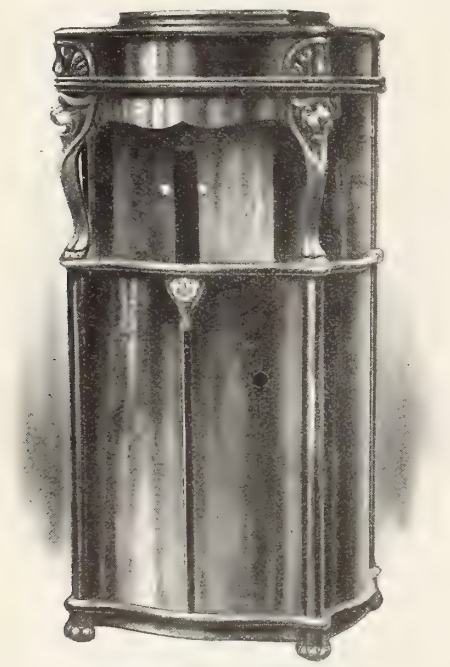
The Columbia Phonograph Co. have now entered the field with an entirely new line of concealed horned graphophones.

These are in cabinet form and retail for $200 and $225.

The Grafonola "Regent," an illustration of which is shown herewith, is certainly a unique creation.

It combines with a dainty library table a complete graphophone equipment. This is cleverly concealed in the body of the table.

The "Regent" Grafonola is adapted for library use, and its field outside is quite extended, as it



THE GRAFONOLA "DE LUXE."

lends itself to varied surroundings in a charming way.

The "Regent" certainly marks an innovation in cabinet talking machines.

Then there is the Grafonola De Luxe, a strikingly handsome cabinet provided with the graphophone equipment, which may be combined with the Regina attachment at the option of the purchaser at $200 or $225, the latter price including the Regina attachment.

The Columbia dealers will see at a glance that with such an addition to the Columbia line it means at once added selling force—it means that the Columbia people are now specializing in a manner which makes their product more attractive from every viewpoint.

BOSTON'S BUDGET OF NEWS.

Great Activity in Trade—Grand Opera Records in Demand—Grafonola "Regent" Being Taken Up by Furniture Houses—Graphophone for Battleship Salem—Eastern Co.'s Big Victrola Business—Cook Likes Victor Line—Ditson's Cheery Report—A Pretty Romance at Eastern Talking Machine Co.'s.

(Special to The Talking Machine World.)

Boston, Mass., Sept. 9, 1909.

Judging from the record of sales of talking machines and records in Boston so far this month, this business is trying to put itself up on a sort of North Pole altitude, only in this industry there is no controversy as to who did the trick, for everybody just now is so busy doing the trick that he hasn't time to make comments about the other fellow. Almost without exception every talking machine dealer and jobber in this city states emphatically that the volume of business done in September will be more than double that done last month, and far ahead of that of last September.

"We are going to have an enormous talking machine business this winter," is heard at every store, and the present indications bear them out.

Of course, one strong factor in the development of the business this winter will be the opening of the new grand opera house, where Constantino, Alice Neilson and the other favorites will be in almost daily evidence. One result already seen is a great impetus to grand opera record sales. Interesting in this connection is the greatly increased sale of Anselmi records, since this great artist has been so widely advertised by the newspapers over here. All the retail stores are "playing up" the grand opera records, the Eastern Talking Machine Co. having a novelty idea by the side of their door. It consists of a portrait of Caruso, in a frame on which is printed the question, "Which Is Which?" When the record is being played inside the question is obvious.

Several new things have been sprung on the local trade by the Columbia Phonograph Co. this month. Chief of them is the new Library Table graphophone, which bids fair to create a sensation here. It combines not only a handsome and useful household article, but is an improvement on the principle of an enclosed, hornless machine in that it is so arranged that all noise of the motor is eliminated. Already seven big furniture stores in the city of Boston have taken these instruments to add to their line of furniture. Manager Erisman of the local Columbia store is making good advertising use of the fact that the company have recently sold 100 of these machines to the Lewis Publishing Co., of St. Louis, for their chapter houses. This library table graphophone marks the biggest advance in the talking machine business since the Victrola was brought out.

The Columbia Co. are also expecting later in the month their new upright instrument. Another new thing just brought out here is the new indestructible record reproducer for Edison machines, in which the point is made smaller than usual, thus doing away with the surface scratching, and giving a clearer, fuller tone.

The Columbia Co. are making good advertising use of the enormous photographs taken of the officers and crew of the Battleship "Salem," when the citizens of Salem presented them, on July 27, with a beautiful Columbia Symphony graphophone and a silver service. During the visit of the battleship fleet here late last month, the salesmen sold six of these big instruments to six of the submarine boats, so that now the Columbia is being played under water as well as on top.

At the Eastern Talking Machine Co., the report is that "Everything points to a tremendous big fall business because it seems as if everybody had regained confidence. The association of the men in the store will begin its fall sessions the last Thursday of this month with a banquet at one of the hotels. Manager Taft is going on a business trip the week before this, but promises to get back in time to attend. The Victrola business here is very big, particularly on the XVI and the Victrola XII. In fact, the increased sales of these instruments are fairly convincing that the coming instrument in popular demand is the hornless one.

An interesting feature in connection with the Eastern Talking Machine Co.'s business is that everything sent out by the firm bears its trademark, which is becoming very well known now. It is a very attractive design, the work of Mr. Freeman, head of the sales force.

William A. Pike, whose stock was badly damaged by fire a short time ago, has not resumed business as yet, but he says that when he does he will put in a more complete line of Victors than before, and will also strengthen his Edison line materially.

Manager Sylvester at the C. S. Osgood Co. is enthusiastic over the big increase that has been made in the Victor sales, and there is a great rivalry between the salesmen, one of whom regards himself as the Columbia "pusher" and the other the Victor "rusher." The Columbia department is keeping up to the hot pace without much trouble. Amberol records take the lead in the Edison line. At the present time there are very few two-minute records being sold. Manager Sylvester declares that he is heartily in accord with the ruling of the Victor company regarding jobbers sending Victor records out on approval.

Iver Johnson Co. are distinctly up-to-date, for they are now making excellent use of the street car advertising, and the window displays are unusually attractive. This company sell a great many small instruments to campers and canoists.

All the boys in Boston are glad to hear of the promotion of W. K. Henderson to the management of the Philadelphia store. He formerly made weekly trips through here.

By some slip, either of memory or typewriter, it was stated in last month's World that the Jerome H. Remick Co. here has a full line of Victors. They carry the Columbia, not the Victor, and as an example of how good business is with them it is only necessary to state that about the first order taken at their Tremont Row store was $40 worth of records to one man.

A neat bit of local business-getting-instinct has been shown by Manager Erisman of the Columbia store, who has secured Prof. Albert Edmund Brown, supervisor of music in Winchester and Reading schools, to make records of three very popular songs, and these are being "whooped up" all right here, because Mr. Brown is very well known and popular. Another straw showing that Mr. Erisman is fully alive to 1910 ideas is the distribution of the Columbia's new foreign catalog, in different languages, each decorated with the flag of the nation among whose representatives in this country it is purposed to send them.

Harry Rosen, the School street dealer, declares that business is developing amazingly well and he is sorry he did not begin earlier.

J. B. Cook, who handles the Victor, says that

MONTENEGRO-RIEHM MUSIC COMPANY, LOUISVILLE, KENTUCKY
EDISON JOBBERS WHOLESALE EXCLUSIVELY We Follow the Golden Rule in all Our Dealings VICTOR DISTRIBUTORS
C. A. RAY, Mgr., TALKING MACHINE DEPT.

he is very glad he put the line in as an adjunct to his piano business.

At George L. Parker's the new Victor room is worth its weight in grand opera records, for it helps sell instruments. The little Victor dog, however, is entering a protest. He says he is put out on the sidewalk and in the doorway so much that he is catching cold, so now Mr. Parker puts him in the window. That dog is a great "purp."

In the big display window of Oliver Ditson Co. this week is a fine showing of high-class musical instruments, and occupying the place of honor is a Victor-Victrola, in a beautiful mahogany case. The Victrola is the star boarder at the Ditson Co., for the volume of business done with that instrument is big in the course of the year. The Ditson Co. have the benefit of the highest class of custom—people who really know and understand music—and who recognize the value in a Victrola. Manager Winkelman said this month that it has all along been very difficult to get sufficient from the factory to supply orders. Grand opera records seem to have the popular call here.

A pretty, little romance which is to culminate in the marriage of George Theissen ,the head shipper of the Eastern Talking Machine Co., to a former stenographer of the force, Miss Janet L. Brundage, has just come to light. Mr. Theissen is a very popular young man in the neighborhood where he resides and particularly so in the social circles, being a member of the Dedham Boat Club and other equally well known organizations. His bride is a brunette and possessed of more than the ordinary amount of charming personality. After the honeymoon, which will consist of a trip through the New England mountains, the couple will reside in Melrose. The employes will attend the wedding, which occurs to-day, September 9th, to wish them a happy future and to receive the advice along the matrimonial lines from one who knows.

DAVEGA'S FALL CAMPAIGN.

S. B. Davega, of the S. B. Davega Co., recently returned from a visit to the Alaska-Yukon Exposition, Seattle, Wash. He was accompanied by Mrs. Davega. Later, his son, Harry, made the same trip, getting back last week. L. Kaiser, director of the company's talking machine department, enjoyed a three weeks' vacation at Lake Champlain. Mrs. Kaiser, who has been in Europe for a couple of months, arrived home on Sept. 4.

Now that vacations are over the S. B. Davega Co. have started in on the trade campaign for fall and winter. Already, as a result of their active policy, they are booking some excellent business, which proves that things are again assuming old time activity. In another part of this paper, page. 13, the S. B. Davega Co. have a very important announcement in which they are featuring a special list of 150 extra fine Edison records. This is something entirely unique, and an offer which should appeal to dealers, who are virtually guaranteed a line of actual sellers—a line which must increase their trade and make money for them.

GEO. W. LYLE IS OPTIMISTIC.

Views the Business Future with Confidence—Columbia Prepared for Active Campaign.

"Business," remarked George W. Lyle, general manager of the Columbia Phonograph Co., who returned from a little outing last week, "promises to be of the right quality and the right proportions this fall if I read the signs correctly.

"We have, as doubtless you know, made preparations for an active campaign and I believe that the talking machine trade all over the country will realize that the Columbia policy is a correct one.

"With our new Grafonola products our line is certainly complete and can satisfy every taste and every pocketbook.

"We are receiving splendid orders and it looks to me as if the Columbia fall would be a good one from every viewpoint."

LANDAY OFF TO PACIFIC COAST.

Leaves To-day on Selling Trip for Talking Machine Supply Co.—Will Visit Every Trade Point of Importance—Landay Bros. Saratoga Store Has a Big Summer Business—Victor Publicity Comes in for Complimentary Words from Manager Louis F. Geissler.

As The World comes off the press for its September issue Max Landay, of the Talking Machine Supply Co., leaves New York for an extended selling trip through the Middle and Far West, going to the Coast before turning eastward again. Max starts September 15, and will be away until the middle of November. The Talking Machine Supply Co.'s line of needles, of which they have several new kinds, ranging from a cheap yet reliable grade to the very best made—bar none, every one alike, according to Mr. Landay's frank estimate of the excellence of his goods, to which many leading dealers give their unequivocal endorsement. "While our specialty is needles," remarked Mr. Landay, "our line of springs, on account of a new factory, are the equals of any in the market; and our parts are known to be of the very highest grade. I shall

MAX LANDAY.

not only call upon the trade in the Middle West, on the Coast and through the Northwest, but shall also go through the South and into Canada."

"Landay Bros.' store in Saratoga, N. Y., next to the United States Hotel, on Broadway, had a fine trade during the season, and we shall keep it open until October 1. During the summer we had a page advertisement daily in The Saratogian, for we are firm believers in advertising. This fall and winter we have contracted for double the space we occupied in the New York daily papers last season. It has paid us handsomely. You will see some clever ads from Landry Bros., written by the best experts in the advertising business, as we have just made arrangements to that effect." Regarding their advertising in general Landay Bros., under date of August 31, addressed the following letter to the Victor Talking Machine Co., Camden, N. J.:

"Your favor of the 27th inst. to hand in regard to local newspaper advertising, and contents noted. No doubt this letter was not intended for us personally, as same must have been a copy that was sent out to all distributers alike, as your company is probably aware that we have been the most consistent newspaper advertisers in this city, that we have appropriated from $5,000 to $10,000 annually for newspaper advertising. For the past twelve months the New York Times has carried our advertisement daily, and copies of a full page advertisement that we held in the Saratogian this summer, no doubt you have received.

"We are great believers in newspaper advertising, and we hope to redouble our efforts on this line this coming fall. We claim the distinction of being the first to demonstrate newspaper advertising in this city, and we hope to continue along this line right along. If you will refer to your own advertisement in the New York World for the past three months you will find our advertisement alongside in each issue. We cannot speak too highly of newspaper advertising for the Victor line, as it certainly has been the leading factor in building up our business."

To which Louis F. Geissler, general manager of the Victor Co., replied:

"We have noticed your liberal advertising and were very favorably impressed by it, and we think that your own experience will verify all that we had to say in our former letter. As you say, that letter was one on general advertising subjects and did not fit your case. if you inferred therefrom that we thought you were doing no advertising. The fact is, that it all of our distributers had done as well as your house, our business would be doubled.

"We should be pleased to receive the copies of the papers containing your advertisements, and are quite sure that every dollar spent in Victor publicity will bring you adequate returns, for, as stated in our previous lengthy letter, we are quite sure that our distributers have not succeeded up to date on connecting up properly and effectively with the factory advertising, and we shall appreciate your efforts in that direction."

NEW VICTOR DEALERS IN CHICAGO.

The P. A. Starck Piano Co. and the Healy Piano Co. to Open Victor Departments—The Spigel House Also Has the Victor.

(Special to The Talking Machine World.)

Chicago, Ill., Sept. 13, 1909.

Some important Victor moves were consummate here to-day. The P. A. Starck Piano Co. have decided to take on the Victor talking machine and will open a special department devoted to these instruments on the third floor, of this building with Harry Berger in charge, with Harry Berger in charge.

The Healy Piano Co. are also establishing a Victor department. This means much because Raymond Healy made a big success of talking machines with the old Healy Music Co.

The Spiegel Furniture House, hitherto Columbia dealers exclusively, have also taken on the Victor in addition.

The Talking Machine Co., of this city, sold the stocks to these concerns in each instance.

GOOD TIMES ARE HERE!

Talking Machine Men Report Business Improvement All Over—L. F. Geissler's Great Report of Increasing Orders for Victor Goods—Some Figures Which Tell the Tale.

Trade with the Victor Talking Machine Co., Camden, N. J., has assumed old time proportions, and Louis F. Geissler, general manager, is greatly pleased over the outlook. An idea of the activity which prevails may be gleaned from a chat which Mr. Geissler had with The World on Monday last, when he said: "Our orders for August were double those of any two months of the year, and orders for the first ten days of September were greater than for the entire month of August. Our pressing plant is now as busy as can be turning out records, and I would impress upon dealers the necessity of placing orders for records with their jobbers at once."

This is gratifying news indeed, and is in line with the reports received of business progress received from correspondents in widely separated sections of the country.

DEATH OF HOMER A. CAMPBELL.

Homer A. Campbell, in charge of the talking machine department of W. J. Dyer & Bro.'s store in St. Paul, Minn., died recently at the home of his brother in River Falls, Wis., where he had gone to spend his vacation. He was 25 years old.

TRADE FABLE
No. 1

There was once a talking machine salesman who through a magnetic personality had the trade in his territory cinched, and whose main occupation after the factory whistle blew seemed to be to put back into circulation the large fat bankroll he received every Saturday. This latter he managed to accomplish with such success that he delighted the hearts of the neighboring bartenders and cabbies and caused strange and deep felt envious remarks to be coined by his brother salesmen from competing houses.

Nightly this star plugger for the talking machine house could be observed at a certain gilded palace on the Gay White Way entrenched behind a battery of fizz containers, expounding the merits of his product to some jay from the hills.

Probably the most remarkable thing about our hero was his extraordinary gift of gab. He could spill out a line of Sheepshead Bay French that would make a Brighton Beach bookmaker hand him the palm without argument.

One time this smart salesman languidly stepped from a Pullman and looked around to see where he was. It happened to be the hottest little town in the world and the cockles of the salesman's heart grew warm as he anticipated the pleasure he would have in calling on his trade; all of whom were more or less sportily inclined. Reaching his hotel, he rapidly wiped his Litholin with a damp towel, and lighting a cigar, made for the firing line.

"If you want to cast your optics on something classy from a stable that's on the level," said the salesman to a thin emaciated buyer, sucking on a cigarette, "just train your glimmers on this collection of brain children." "Hold on now," continued he, "you are about to slide me the Cook shoulder and tell me you're stocked up to the hilt. If you mean to admit that you are playing to crowded houses in the stock room with other machines, let me tell you that your business discernment needs polishing up a bit. Every machine in the world but mine is in comparison like a lame pup to a King Lud. Fire away now, kid, and let me get busy with my Dixon."

At this point the buyer, who had been holding himself in restraint, slowly rose and straightened out, revealing a physique of unusual solidity and strength.

"Dog," said the buyer, "for some few minutes I have been an unwilling audience to a knocker. Of all the men I despise the knocker is I-T. Under ordinary conditions I might have let you wander out and disseminate some more of that egotistical flow of gab to the rest of the trade here, but you seem to have such an incurable desire to knock that I am going to thrash you. Put up your dukes."

Three weeks afterward a tottering figure with a bandaged head was seen emerging from the local hospital and hasten to the railroad station in time to catch the outbound train.

Moral.—If you must knock use a hammer.

BIG SPURT IN BUSINESS.

The Leading Talking Machine Men Are Optimistic Over the Opening of Trade for September.

With the opening of September business with talking machine jobbers, distributers and dealers appears to have taken on a new lease of life. Reports from local houses are of this encouraging nature, and from outside concerns—East and West—the advices are of the same pleasing tenor. It also appears that the Southern trade will roll up a new record in respect of sales.

L. Kaiser, of S. B. Davega Co., New York, said: "Business in our talking machine department has improved very much indeed, recently. Dealers are showing an interest that has been lacking for months. The outlook for the fall season is very bright."

G. T. Williams, general manager of the New York Talking Machine Co., said: "Yes, indeed, trade is looking up. September is very much better than for several weeks past. We are preparing for a good fall season, and our dealers talk in the same way."

H. A. Yerkes, manager of the wholesale department of the Columbia Phonograph Co., General, said: "Sales are increasing and the wholesale department has truly made a very satisfactory record considering general business conditions. We are in good shape now, and our jobbers and dealers are convinced a big trade is before them this fall. Candidly speaking, however, while September has opened up fairly well, still business should be better than it is. In a week or so things will be moving right along."

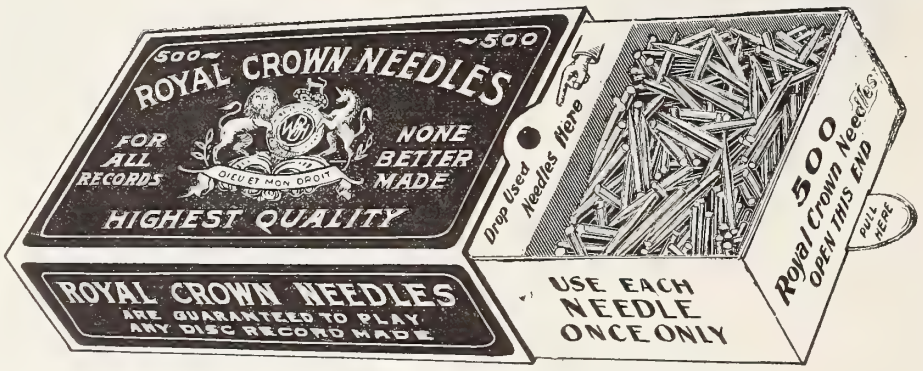
Chas. H. Ditson & Co. said, "Our talking machine department's business is growing rapidly, and during the summer our sales went away beyond our expectations. September so far is keeping up this pace, and we feel assured of a strong trade this fall, wholesale and retail."

The Eilers Piano House, Portland, Ore., have always been Edison dealers and not jobbers in that territory. They have always done an excellent business with the line, and there never have been any differences between the two companies, as may have been inferred from an item that appeared concerning them in the August issue of The World. It was one of those semi-official mistakes that will occur with the best regulated intentions, and for which The World is entirely blameless.

The first meeting of the creditors of the Leeds & Catlin Co., bankrupts, was scheduled to be held yesterday at the office of William Allen, referee in bankruptcy, 67 Wall street, so all concerned may attend, prove their claims, appoint a trustees, examine bankrupts and transact other necessary business.

Don't think because you have heard someone say, "It is useless to devote time and money to window displays," that it is true; they put up a poor argument when cornered; try a thing and argue from experience.

ROYAL CROWN NEEDLES



Showing a fac-simile of the patented box ready for use, Always printed this way

EVERYBODY is anxious to get the most perfect and natural tones from their talking machines, and same are only to be obtained by using

ROYAL CROWN NEEDLES

WE PACK THE GENUINE

ROYAL CROWN NEEDLES

IN BOXES CONTAINING

300 needles to a box
400 needles to a box
500 needles to a box
800 needles to a box
1000 needles to a box

We manufacture these needles in all the various tones, as follows: Soft Tone, Medium Tone, Standard Tone and Loud Tone.

We supply to jobbers only; if your dealer cannot supply you, write direct to us.

W. H. BAGSHAW

But most wonderful of all: Sembrich, Caruso, Scotti, Journet, Severina and Daddi singing the Sextette from "Lucia" in your own parlor!!!

Gentlemen:

This is an age of red-blooded men with but small space and meager reward for the loiterer.

We Think:

The Talking Machine Company of Chicago, since its entrance into the exclusive wholesale branch of the Talking Machine business has, by its unswerving allegiance to the cause of **better service**, to the cause of the **dealer** and the cause of **Victor Talking Machines**, made for the up-lift of the Talking Machine business not only in our own city, but generally throughout the country.

A New Era in the Talking Machine Business has been created. The **jobber** of to-day is working for the **dealer** of tomorrow. The initial order is not sought for now as of old. The steady, enduring business of the dealer is what we all strive for. Our wholesale attitude makes it possible to aid the Dealer in a retail way. Our efforts are all on **Victors.** This concentration of purpose gives us a definite, tangible path to work on.

Mr. Dealer:

If you could buy **Victor** goods in sufficient quantity to anticipate your Winter business and be rid of the terror of paying for them before the returns have started to come in, would you do it?

We have a plan of easing the load and paving the way to a profitable season. In your business lack of capital is a handicap, but not an **unsurmountable difficulty.**

In the name of good service, ambition, aggressiveness and liberality, we solicit your business.

The Talking Machine Company
72-74 Wabash Avenue Chicago, Illinois

After they are reproduced in the laboratory of the Edison Company at Orange, they will be placed immediately upon the market. This will be within a couple of weeks, as the work on them will be rushed, in order to have the records on sale in the United States and Mexico in time for the meeting of the presidents in October.

"The President, by his selection of the Edison phonograph for the recording of his voice, has shown his recognition of the genius of Thomas A. Edison, the inventor of this great instrument, which stands in a class by itself, being, in fact, a machine on which records can be made at home at any time. As a teacher of languages, as well as a provider of home entertainments, this marvelous creation of the brain of Edison stands unrivaled among all other phonographs in the world to-day."

Ridgway With Lyon & Healy.

L. B. Ridgway, who for three years traveled on the Coast for Sherman, Clay & Co., and knows the wholesale game from start to finish, has joined the traveling forces of the talking machine department of Lyon & Healy.

SALTER CO.'S NEW CABINET.

Introduce a Number of New Styles Notably One to Match the New Victrola No. 12.

(Special to The Talking Machine World.)
Chicago, Ill., September 4, 1909.

The Salter Manufacturing Co., of this city, are just introducing a cabinet to match the new Victrola XII machine. It is an extremely handsome piece of cabinet work made in solid mahogany, with rounded corners, and carved capitals and feet. The interior arrangement embodies the Salter system of horizontal wood shelves, felt lined, one shelf to a record, and which has come into great popularity with the wide distribution of the double-faced record. There are two tiers of shelves, one for ten, and the other for twelve-inch records, both, of course, suitable for the ten-inch. The cabinet holds 160 records and will retail for $45. A plainer style of the same size and holding capacity retails for $30. A molding around the top keeps the machine from slipping off the cabinet when winding the spring. The company also have several other new styles of disc cabinets, all equipped with the felt lined shelving and the top molding. A new catalog illustrating and describing the company's entire line of disc and cylinder cabinets is now on the press and will be ready for distribution about September 15. An important anouncement from this concern appears on page 54 of this issue.

Dead stock means dead capital, and dead capital is ruinous to successful advertising.

Col. F. B. T. Hollenberg, president of the Hollenberg Music Co., is spending the "hot days" at his summer home in Wisconsin.

Otto Steigmare, of O. K. Houck & Co., of Memphis, spent a few days in Little Rock recently.

GEISSLER HOME FROM COAST TRIP.

General Manager of Talking Machine Co., Chicago, Returns from a Sojourn of Several Weeks in Various Western Cities—Impressed With the Growth of San Francisco—Something About the Great Music Houses—Prosperity Prevails, People Have Money and What Is More Important Are Ready to Spend It—Has Interesting Chat With World.

(Special to The Talking Machine World.)
Chicago, Ill., Sept. 5, 1909.

Arthur D. Geissler, general manager of the Talking Machine Co., returned on Wednesday of this week from his annual trip to San Francisco, his former home. He spent several weeks among his old friends in Frisco and Los Angeles and spent a day or two at Salt Lake City on the way home. Incidentally, he visited most of the talking machine dealers and jobbers. "It is a fact,

ARTHUR D. GEISSLER.

backed up by statistics, that more talking machines are sold on the Pacific coast in proportion to the population than anywhere in the world," remarked Mr. Geissler. "The house of Sherman, Clay & Co. is in itself an immense factor. They have branch stores all up and down the coast and confine their entire efforts to the Victor. The new San Francisco is the most beautiful city that I have ever seen. Practically, the entire business district is new and the buildings are just as clean as the day they were put up. San Franciscans, like the citizens of Baltimore, realize that the fire is the best thing that could have happened to the city. The coast is prosperous and the people are spending money as freely as the easterners. It is interesting to note the character of men in the talking machine and music trade, and the interest they take in political and public affairs. Byron Mauzy, head of the well known music house, made a gallant fight for the Republican nomination for mayor against Crocker, who was supported by the Business Men's Association, of which Andrew McCarthy, treasurer of Sherman, Clay & Co., is chairman.

"Phillip Clay, vice-president of Sherman, Clay & Co., is head of the committee on arrangements having in charge the carnival to be held in October in honor of Gaspar Di Portola, the first Governor of California.

"There is a vast amount of building activity among the talking machine and music concerns. Kohler & Chase are putting up a magnificent building, which will be finished in December. Clark Wise & Co. are in their fine five-story building, which is located on the main shopping thoroughfare, and they are attracting great crowds by demonstrating an Auxetophone from a second-story window. Wiley B. Allen Co. have in their new building one of the most beautiful talking machine departments that I have seen. The finish is in white enamel and mahogany and the equipment is superb. They also have ten record-demonstrating rooms in the basement.

"I received the surprise of my life when I went with Ferd Stevenson, secretary of Sherman, Clay & Co., to a deer barbecue at the camp of the Lagunitas Rod and Fishing Club in the mountains in Marin County. It was strange enough to see magnificent five-pronged bucks which had just been killed in the vicinity and great hampers of beautiful trout, and all within two hours' ride of Frisco. I hadn't been at the camp fifteen minutes before I ran into a party consisting of President Eldridge R. Johnson and Leon F. Douglass, chairman of the board of directors of the Victor Co.; B. G. Royal, president of the Universal Talking Machine Co., and Peter Bacigalupi, the big San Francisco jobber. Messrs. Johnson and Royal had been visiting Mr. Douglass at his home in San Rafael, and the three came into camp for the barbecue after a very successful deer hunt.

"At Los Angeles I had the pleasure of inspecting the new talking machine department of the Fitzgerald Music Co. The department manager is Mr. Andrews, formerly talking machine manager for George J. Birkel Co. The Southern California Music Co., are doing an immense business and Edward Geissler, managing partner of the George J. Birkel Co., looks forward to the largest fall business in the history of the house.

"At Salt Lake City I made a hurried call on the Clayton-Daynes Music Co., who have recently been made Victor distributers and on the new Daynes-Beebe Music Co., who have fine Victor retail warerooms."

Here is a good definition of a gentleman: "A man that's clean inside and outside, who neither looks up to the rich nor down on the poor, who can lose without squealing and win without bragging; who is considerate to women, children and old people; who is too brave to lie, too generous to cheat, and who takes his share of the world and lets other people have theirs."

Sectional Cylinder and Disc Record Cabinets

Resembles a Handsome Sectional Book-Case

The sections for cylinder records are equipped with thirty-three compartments, each compartment holding four cylinder records, each section having a total capacity of 132 cylinder records.

The sections for disc records are equipped with forty compartments, each compartment being subdivided for three disc records, each section having a total capacity of 120 records.

The record filing capacity in these cabinets is unlimited.

"The Harvest Is Ripe"

Splendid crops in the Middle West mean that a great amount of money will be spent this fall for Talking Machine Equipments.

Are You Prepared

to garner your share of the abundance?

¶ The cool evenings mean indoor entertainment and the Talking Machine is recognized as the greatest of home entertainers.

¶ These facts, Mr. Dealer, mean money in your pocket if you are in position to take advantage of your opportunities.

¶ Let your townspeople know that you supply the best in machines and records: that you can fill their wants promptly and satisfactorily.

¶ Your ability to carry out your promises is unquestionable if you place *your* orders where they will receive proper and painstaking attention.

¶ Our Talking Machine department is the acme of efficiency; no order of yours is too small to merit our best efforts.

¶ Dealers handling both Victor and Edison machines and equipments will appreciate the saving in freight costs, and quickness of delivery, made possible by buying from a concern that can supply both lines. Our stock is complete in every detail.

¶ When you deal with us you are dealing with a house almost half a century old, an insurance of right treatment.

Take Advantage

of our new, special machine offer and acquire a representative stock for your Fall trade.

CHICAGO

OUTING OF WURLITZER EMPLOYES.

The Chicago Branch of the Wurlitzer Co. Held Their Second Annual Outing on Labor Day —A Most Enjoyable Time at Dellwood Park —General Manager Uhl Umpire.

(Special to The Talking Machine World.)
Chicago, Ill., Sept. 7, 1909.

The employes of the Chicago branch of the Rudolph Wurlitzer Co. enjoyed their second annual outing on Monday of this week, Labor Day. The scene of the outdoor festivities this year was Dellwood Park, a beautiful resort near Joliet. The trip was made over the Chicago & Joliet electric, a train having been chartered by the company. It was a regular basket picnic, and tables were spread on the green sward in the natural part of the park. The great feature of the day was the baseball game between the single men and the married men teams. The final score was 18 to 14 in favor of the benedicts. The feature of the game was the clouting of the married men, who made ten runs in one inning. The umpire was General Manager E. H. Uhl, and it is hardly necessary to state that his decisions were unquestioned. Honors are now even. Last year the single men won. In the afternoon a big program of athletic events was pulled off, ending with a tug of war between two picked teams, selected by Assistant Manager F. A. Siemon and T. P. Clancy, manager of the automatic department. Siemon's team won. After the distribution of the prizes to the winners of the various contests, dancing, chute shooting and the various concessions of the park were indulged in until 7 o'clock, when the cars were taken on the return trip to Chicago.

CLOSING A SALE BY TELEPHONE.

A Story Which Proves That Milwaukee Is Thoroughly Up-to-Date in Selling Machines.

Wafted on the malt-laden breezes from Milwaukee comes the following, which intuition teaches one, is probably the effort of the fertile brain of A. D. Herriman, manager of the Columbia branch in the city of beer and beauty:

A. N. Francis, who enjoys the distinction of selling more Symphony grand graphophones than any other member of the selling staff of the Milwaukee branch of the Columbia Phonograph Co.'s store, reports a novel experience in closing a sale by telephone.

Mr. Francis had an appointment to make a demonstration at a customer's home (using customer's machine), at which time the prospective buyer was to be present. The hustling salesman was on hand with a good supply of Fonotipia records, and while waiting for the buyer to put in an appearance the machine was turned loose, much to the enjoyment of the assembled guests and neighbors, who seated themselves comfortably on the lawn.

The telephone rang just as Bonci started his "Questa o Quella"; the party at the other end was the prospective customer, who wanted to be convinced that grand opera was possible "in your own home," and called up to say that he would be unable to keep his engagement. "I Love My Graphophone, but Oh You Telephone." Bonci kept on singing, and Mr. Buyer heard not only Bonci's voice over the wires, but Constantino, the new tenor, put one over, and Kubelik fiddled some.

Thus ends all good stories. The man said send the outfit up, the hello operators enjoyed the songs and music, and last, but not least, the moral: Use every means possible and there will be no dull days.

WHAT SALESMANSHIP MEANS.

Something More Than Mere Selling of Goods —Aggressiveness and Persistence Two Necessary Factors.

There is a saying, "I would rather have five complaints as to my prices being too high than to have one complaint of the poor quality of my goods." That is a good line of argument for salesmen to use.

Salesmanship means the selling of goods at a profit. Aggressive salesmanship means all of that and with it everlastingly keeping at it, for it is the insistent, persistent plugger that is the aggressive salesman, whether selling goods to you as a dealer or whether selling goods over the counter. Aggressive salesmanship means, furthermore, that the man selling the goods should go after the things that the other fellow is waiting for. The aggressive salesman is the reaper, not a gleaner.

It is the salesman who keeps the smoke belching out of our millions of smokestacks from coast to coast and from Canada to the Gulf. Success does not come by trying to undersell your competitor, but rather in upholding prices so that the highest profit can be obtained by all. That is a fundamental principle of good merchandising and good salesmanship. Anyone can sell goods on a concession basis. Anyone can sell goods like a slot machine—any kind, any price—but the successful salesman and the successful firm has quality goods at quality prices. The man who has only price in his selling argument is not a salesman, never was, and never will be. All people are not looking for the cheapest place to buy. They want good goods, good service, good treatment. Many sales are lost because the customer never knows when the salesman who has the habit of cutting prices, has struck his bottom price. Cutting prices is not only a dangerous method of doing business, but nearly always it is a ruinous method and it is one a good salesman never employs.

MORE CARE IN PACKING GOODS.

The railroad traffic managers are co-operating in all parts of the country in an endeavor to educate shippers to pack their goods with more care and to look more carefully after the directing and tagging of the same. It is said that the hardware men of the country are in as much need of reform in these matters as are those in any other line of trade. Goods packed in frail crates, or in boxes of insufficient strength, will almost inevitably be subject to loss and damage in transit.

The chairman of the St. Louis Traffic Association sees an improvement already as a result of the agitation of this subject. He says: "The two greatest sources of claims on the railroads for damages are improper marking and improper packing. Shipment should be started out right in the beginning. It pays the shipper to do so, as he is not only saved the annoyance and correspondence incident to shortages or damage, but his shipments arrive more promptly, in better condition, and his customer is pleased. This seems a self-evident fact, but few seem to realize it.

"The recent rules for marking shipments have had a most marked effect. One line which had found it necessary to operate a warehouse for the disposition of unmarked articles is about to abandon its warehouse for lack of business. The saving in claims, to say nothing of the saving in friction between the road and its patrons, is simply incalculable."

TO TRANSFER BANKRUPTCY CASE.

Creditors Petition to Have Leeds & Catlin Case Transferred from Connecticut to New York Court—Receivers Fail to Qualify—Petition Will Be Granted as Matter of Form at Hearing Which Will Occur Later.

A petition to transfer the bankruptcy case of the Leeds & Catlin Co., talking machine and record manufacturers, Middletown, Conn., from Connecticut to the District Court of the United States, southern district of New York, was heard August 23 before Gustaf B. Carlson, referee in bankruptcy, at Middletown. The petition states that "Theodore H. Taft and Thomas S. Brown were appointed by the United States District Court for the district of Connecticut as temporary receivers of the assets and effects of said bankrupt, but have failed to qualify as such; that seventy-five per cent. of the creditors of said bankrupt are located or have their principal offices in the City of New York; that the books and officers of said bankrupt are located in the City of New York; that it is in the interest of creditors and for the benefit of the estate generally that the proceedings be consolidated and that the proceedings in the State of Connecticut might be stayed and that the entire and further administration of the estate be relegated and transferred" to the New York federal court. As this is a matter of form, the petition will be granted, and the sale of the factory property and other assets of the bankrupts at Middletown will be disposed of under order of the court.

It is said the defendants in the "dubbing" case, in which Judge Chatfield gave them that awful "swat," had orders on hand for 200,000 records.

The Missing Link

WHICH ?

This is SUPPOSED to be the Missing Link between Man and Monkey.

This New All-Metal Ball-Joint Horn Connection is **BEYOND A DOUBT** the Missing Link between the Phonograph and Horn.

"TALKER" CONDITIONS IN FOREIGN COUNTRIES.

Discussed by J. O. Prescott, Who Is a Close Observer of Developments in the Talking Machine Fields of European Centers—Business Improving Abroad—The Vertical Cut Disc Coming—Pathe Freres in the American Market Soon—His Interesting Experiences in Russia, China and Japan and Observations Thereon—Russia and Japan Are Preparing for Second War.

About a month ago—on August 19 to be exact—J. O. Prescott, formerly with the American Record Co., defunct, and at one time manager of the export department of the Universal Talking Machine Mfg. Co. when in New York, came back to this country from a trip around the world. He sailed May 19 on the "Lusitania," of the Cunard line, at a moment's notice, as it were, expecting to return in three weeks; instead of that it was so many months. In a prefatory way it may be said that Mr. Prescott is a brother of F. M. Prescott, one of the best known figures in European talking machine circles a few years ago, but now retired at Summit, N. J., on a comfortable fortune made in the business, and who, by the way, is across the water. J. O. and F. M. Prescott, in the early history of the trade, were large exporters of the National Phonograph Co.'s product.

From this recital it may be inferred that Mr. Prescott's acquaintance with trade affairs is pretty wide and thorough. What he prides himself upon especially is his mechanical knowledge of talking machine devices and processes, and of which he is also an inventor. In addition he is a thoroughly educated man, a close and intelligent observer, has traveled extensively and can speak fluently several languages besides English. Consequently what Mr. Prescott saw when abroad on his last trip and his deductions therefrom may be accepted as coming from one as far from prejudice as human nature will permit a man to be who has been "through the mill," knows what he is talking about and has a keen sense of humor. Over and above this he is now engaged in a totally different line of business, and therefore such time as he devoted to inspecting European talking machine plants, talks with trade authorities there, and the opinions he derived therefrom are purely those of a disinterested traveler. His informal chat with the World follows:

"As you know, when I went away in a hurry my stay was expected to be brief; in fact, I almost figured in catching the same steamer back on its second trip out. Instead of that I went across Europe, into Russia, from there, via Siberia, to the eastern Pacific Coast, down through China, Manchuria, Corea, over into Japan, thence to San Francisco and across the continent to New York—literally around the world. Though out of the business for good and all still I could not shake off so many years' connection entirely, so I was interested enough to see what was being done, what was going on and the general conditions of the trade in Europe, especially as to new devices, methods and goods.

"Let me say I found business in excellent shape, the majority of the manufacturing companies having about all they could conveniently attend to, and that is not describing the situation too strongly. Possibly I may have been too much impressed with what I saw, but that is only a matter of opinion. One thing that came under my observation that could not be ignored is the growing popularity of the vertical-cut sound wave on disc records. I believe it is the coming record, and that its introduction in the United States by the present large companies is only a question of time, and short at that. I am convinced, from what I saw and heard, that manufacturers here will have a vertical-cut disc on the market inside of a few years.

"What convinced me of its coming strength was my visit to the establishment of Pathé Frères in Paris. Emil Pathé showed me some really wonderful records—twenty inches or more across—playing twenty minutes with a sapphire reproducing point. You know a steel needle, no matter how carefully made, could not stand this wear; that is the reason the American records are made of the present size. As I talked French like a native, of course M. Pathé found no difficulty in explaining things, and he did not hesitate to show me practically all the new ideas his firm had worked out and in the process of completion. The sound reproduction of their vertical-cut records was most perfect. The notion that true effects cannot be attained by use of the undulating sound line is wrong. With a blunt or round sapphire point gliding easily over the up-and-down cut—no sharp angles or points to encounter—just smooth waves, so to speak, the results were most gratifying and the effects were reproduced with great fidelity.

"Pathé Frères expect to place their vertical-cut discs on the American market within a year. Of course, I know they have a branch house new devoted exclusively to the moving picture proposition, but when they come to New York this time they propose to be in right and will go after business in no uncertain way, as you know they have ample capital. Yes, I am aware that in the past they have been flirting with the idea of putting out their line in this country and even establishing a factory. Perhaps they got 'cold feet' or were afraid of the patent situation. Whatever the cause, however, they did not materialize. The volume of their current business is so enormous that it is impossible to give this proposition—for it is a big one—the necessary time or attention to perfect plans for its development along successful lines.

"My experience in Russia was peculiar and not free from excitement. A traveler, no matter if he is an American, is not permitted to pass through the empire wearing a masonic or any other kind of secret society pin or other device exposed about his person or on his watch. They must be concealed. No cameras are allowed and the subterfuges we employed to mislead and confuse the Russian soldiery while a few harmless pictures of scenery and characteristic oddities of the people we saw here taken were amusing to say the least.

"As a matter of fact Russia is straining every nerve in making preparations for a second war with Japan, and it is bound to come within a few years. Hence the officials are fearful of all kinds of pictures that might give the slightest information as to the troops that are being constantly drilled, or of fortifications and military depots erected for the storage of arms and ammunition. The Russian common people are extremely poor. They are taxed to the point of poverty and therefore precious little money is being spent for talking machines, excepting perhaps of the very poorest kind.

"Think of undertaking a railroad journey of fifteen days! This is what I did, going from Moscow to Vladivostok on the Sea of Japan. The Trans-Siberian Railroad, thousands of miles long, is a great achievement, but, as was proven during the late Russo-Japan war, it was totally inadequate for the express purpose for which it was built. The Russians are now double-tracking the road and when it is completed preparations for the second war with Japan will be pushed forward rapidly. Every effort with that end in view is being strained.

"In Japan I found the same feeling. The Japanese are also on the job, and they, too, are gathering war material, ships, money, strengthening and enlarging their fortifications, erecting new ones and taxing the people to the limit. Japan is a small country and the population is poor, but they nevertheless realize why they are called upon to 'give up' and therefore they 'come across' more or less cheerfully. War with the United States? No, far from it. Japan is eager to avoid any difficulty with us. Because outside the extremely friendly relations with this country they could not survive the strain of two wars in succession.

"But excuse me from permanently living in Japan. The beautiful pictures we see there of entrancing landscapes—the land of the chrysanthemum and the lotus flower—are on postal cards only. Attempts to manufacture imitation American talking machines and records have been made but they do not amount to much. No matter how cheap these goods may be Japan is a poor market, as nobody has any money excepting the very rich, and they are comparatively few in the teeming millions of ordinary Japs. Of the rice, it is a popular saying among the foreigners that the Japanese eat their own crop year in and year out. But as Kipling says, that is another story.

"China is in bad shape financially. The 'American panic,' as the disturbance of 1907 has been termed by Europeans, has just about struck China, and business is almost at a standstill. Money is scarce and tight. Moultrie & Co., of Shanghai, the greatest compradors or merchants on the coast, and who have handled large quantities of talking machine goods for all the great American manufacturing concerns, told me the outlook at present throughout the Orient was dismal. I heard of the Victor goods everywhere. Coming across the Pacific from Yokohama to San Francisco in the 'Nippon Queen,' a Victor Victrola was installed in the cabin and 'Red Seals' were in demand."

TO HANDLE THE COLUMBIA LINE.

McMurry & Becker, New Dealers in Schenectady, Will Also Handle Hallet & Davis Pianos in Addition to Talking Machines.

(Special to The Talking Machine World.)

Schenectady, N. Y., August 31, 1909.

The new music dealers, McMurry & Becker, of this city, who open their store the first of next week, have become Columbia dealers, and will handle that line exclusively. They placed a good sized initial order for machines and records, and their talking machine department will be managed b yan experienced man. The Hallet & Davis pianos will be their leaders in the instrument line, and they will also carry a substantial stock of small goods and sheet music. The firm are composed of enterprising men, with a complete knowledge of the business, and their success is assured.

NEW RECORD EXCHANGE PLAN.

A new permanent record exchange proposition, that became effective Aug. 15, has been formulated by the Columbia Phonograph Co., General, wholesale department, the particulars of which are embodied in the appended letter that was sent the trade:

"To the Trade: All instructions prior to this date relative to the exchange and return of records, cylinder and disc, wholesale and retail, are hereby cancelled, and the below made effective as of August 15, 1909. No retail exchange authorized—even exchange wholesale:

"Until further notice our exchange of cylinder and disc records will be confined to Columbia cut-out records, which now or later appear in our current catalogs, said exchange to be made semi-annually. Our first exchange on this basis will be made February 15, 1910, six months from August 15, 1909, to cover records the cutting out of which may be announced on or before that date. Full particulars, together with all necessary order forms and blanks to cover this exchange will be prepared and placed in your hands early enough before that date to enable all dealers to make the necessary preparations.

"Under the present plan of issuing new records each month it will be necessary from time to time, in order to keep our list of records limited to a reasonable number of selections, to drop certain selections from our catalog, and we have decided upon the above course to protect our trade (Columbia dealers) against the necessity of carrying an unreasonable large catalog."

When a clerk grows too big for his position someone is going to find it out, and he will advance because he cannot be kept down.

MILWAUKEE'S NEWS OFFERINGS.

Wisconsin Talking Machine Dealers' Association Organized With H. W. Krienitz as President Due Largely to Lawrence McGreal's Earnest Efforts—General Meeting Called for September 17—Local Association a Proven Success—Big Fall Business Looked for by Dealers—Wholesale Trade Rapidly Increasing—McGreal Sells Out Piano Stock—The New Library Table Graphophone—Victrola Sales Booming—Saak Leases Additional Quarters—Entertaining an Ambassador—Personal Notes of Interest—Other Trade Items of the Month.

(Special to The Talking Machine World.)

Milwaukee, Wis., Sept. 7, 1909.

The movement started in Milwaukee some months ago by Lawrence McGreal and other leading talking machine dealers, for the organization of a State talking machine dealers' association, has at last materialized. A short time ago dealers of Milwaukee and a few from surrounding towns met at Mr. McGreal's place of business and organized temporarily the Wisconsin Talking Machine Dealers' Association. Harry W. Krienitz was elected president, Miss Gertrude F. Gannon secretary and C. C. Warner treasurer, all of Milwaukee.

It was arranged at this meeting to call a general meeting of the dealers throughout the State Sept. 17, at 3 p.m., at the McGreal establishment, 174 Third street, Milwaukee. Miss Gannon, secretary, has sent out letters to all dealers of the State apprising them of the coming meeting, and already many replies have been received, indicating that the attendance will be large and that there is plenty of interest in the matter. Attention is being called to the fact that the special meeting for organization is to be held during the week of the Wisconsin State fair in Milwaukee, and that it is also on the day that President Taft is to speak in Milwaukee. President Taft speaks in the morning and the special meeting will be held in the afternoon, so it is expected that this extra attraction will be the means of inducing a large number of dealers to attend the meeting. Permanent officers will be elected at the meeting and a general discussion on all subjects pertaining to the trade will be brought up. Dealers have been asked to make a memorandum of any matter which they would like to bring before the association for discussion, and a particularly valuable and interesting gathering is expected.

The attention of dealers has been called to the fact that several States have organized local and State associations and that these are operating with the greatest possible success. The Milwaukee Talking Machine Dealers' Association, organized some months ago, has proved of especial value to dealers of this city, and it is the feeling that a State association will be of vastly more importance. The idea is for the dealers to meet annually, or more often if necessary, for the purpose of taking up and discussing such matters as may be of interest to the talking machine trade, and pass such resolutions as they may deem wise to lay before the National Association of Talking Machine Jobbers, who in turn will bring them before the manufacturers. Dealers themselves feel that nearly every branch of trade has its local and State associations and the conviction has grown among the dealers that they should get together for self-protection. Practically every dealer approached believes that great good can be accomplished by united action, and that many abuses can be remedied through the medium of a State association.

Expect Big Fall Business.

One of the biggest fall businesses in the history of the Wisconsin talking machine trade is expected by practically every dealer in the State. General conditions have improved, money is becoming more plentiful and confidence seems to have at last returned, with the result that people are more inclined to indulge in luxuries. Dealers say that the retail trade has displayed vast improvement, even at this early date, and there is every indication that trade throughout the remainder of the year will be of the very best.

The Milwaukee wholesale talking machine trade has been increasing by leaps and bounds until the present trade is exceeding all expectations of jobbers. Indications are that dealers were never lower on stocks than at the present time, and now they are hurrying to order before the later fall rush overtakes the trade. One wholesale representative who left Milwaukee recently sold $2,000 worth of stock in one day.

McGreal Disposes of Piano Interests.

Lawrence McGreal has disposed of his piano interests in order that he may devote his entire time to the talking machine business. His stock of Strohber, Hoffman and other pianos has been sold to the Gimbel Bros.' piano department, which is now carrying on a special sale of the instruments. Mr. McGreal added the piano line to his business a few months ago more in the nature of an experiment than anything else, believing that perhaps a side line made up of the excellent pianos, manufactured by the Smith, Barnes & Strohber Co., at their North Milwaukee factory, might prove to be a profitable venture. The well known talking machine man still believes that his piano line was entirely satisfactory and that a good live side line is all right for the average retail dealer, but that the average jobber and retailer should devote his entire time to his talking machine business.

Alfred Hille Optimistic Over Fall Outlook.

That the fall talking machine business will be more than satisfactory is the opinion of Alfred Hille, manager of the talking machine departments at the Joseph Flanner Music house, Milwaukee. Mr. Hille reports some good sales in both the machine and record lines.

William P. Hope, Wisconsin and upper Michigan representative of the National Phonograph Co., has just returned from a special trip to Winnipeg, Can., where he called upon leading jobbers and retailers.

Library Table Graphophone Liked.

The Library Table graphophone, the new model of the Columbia, has made its appearance at the Milwaukee branch of the Columbia, and Manager A. D. Herriman reports that it is creating something in the way of a sensation. Several orders for immediate delivery have already been received. The machine is built on artistic lines, and when closed represents what the name implies, a beautiful piece of parlor furniture, a library table, standing 33 inches high and with the top measuring 29x46 inches. Dealers are interested in the announcement that this latest output of the Columbia factory is a creation of W. C. Fuhri, district manager of the company at Chicago. The machine has spacious accommodations for records and accessories, concealed horn and other features which seem to be proving popular with the Milwaukee trade.

Ambassador Schmidt's Prediction.

William Schmidt, Victor representative of Wisconsin, was in Milwaukee a few days recently after a most successful trip about the State. Mr. Schmidt predicts that the fall and winter trade is to be a record breaker. Mr. Schmidt has just returned from a visit to the Victor company's factory at Camden, N. J.

McGreal's New Victrola Room.

The business and private offices at the establishment of Lawrence McGreal have been moved to other quarters on the main floor, and the former office space has been made into a large and handsome Victrola concert room. An especially fine trade in the Victrola line is being experienced by Mr. McGreal and other dealers of Milwaukee.

H. C. Smith, Edison and Victor dealer at Whitewater, Wis., was a recent Milwaukee visitor.

Henry Saak Still Expanding.

Henry Saak, the new Milwaukee talking machine dealer, handling the Columbia lines exclusively, recently established by A. D. Herriman, reports business exceptionally good. When Mr. Saak was interviewed by the representative of The Talking Machine World he was busily engaged in instructing a force of workmen at work enlarging his Vliet street store. Since opening his store in May of this year Mr. Saak has found it necessary to enlarge his floor space, and has secured the lease of the adjoining building, which he is now having reconstructed to accommodate his rapidly growing business. Private demonstration booths are being built and the work so far advanced gives promise of a very up-to-date and well appointed talking machine establishment.

Before engaging in business for himself Mr. Saak was connected with the Columbia Co. for a period of four years and more, working for the Detroit, Philadelphia and Milwaukee branches as instalment manager, and his excellent experience and his pleasant personality fits him for his new undertaking and assures his success.

Wisconsin Music Co. Buys Out Devoe.

The Edison stock and good will of C. B. Devoe, of Richland Center, Wis., has been purchased by the Wisconsin Music Co., of Madison, Wis., which will conduct the Richland Center business as a branch establishment.

How Ambassador Zerkle Was Entertained.

E. O. Zerkle, the hustling traveling salesman from the Chicago office of the Columbia Phonograph Co., stopped off in Milwaukee recently while on his northern trip through Wisconsin and Michigan and was the guest of A. D. Herriman, Milwaukee manager of the Columbia. Mr. Herriman and Mr. Zerkle spent the evening at a local theater, the special feature of the evening's entertainment being the song, "My Wife's Gone to the Country." The artist rendering the song happened to be an old schoolmate of Mr. Zerkle's, and he reconstructed the verses of the song to the effect that Mr. Zerkle had started out again on a record-breaking trip and that the resulting commission would take the whole Zerkle family to the country for an indefinite period. Other verses, equally as interesting, were given, and the whole thing made a decided hit. The song also made a big hit with "Eddie" Zerkle, and he left Milwaukee with the renewed determination to make his September trip the banner one of the year.

Big Sales of Edison Business Phonographs.

Some big sales in both records and talking machines are reported by J. H. Becker, Jr., manager of the talking machine department of the Hoeffler Mfg. Co. Mr. Hoeffler reports some very good sales in the Edison Business phonograph line.

J. R. Boles Returns from Visit to Seattle.

John R. Boles, Edison dealer at Kiel, Wis., has just returned from an extensive trip through the West, where he visited the Seattle exposition and various cities along the coast. Mr. Boles owns a large ranch of several hundred acres in Montana and he spent a short time inspecting his property in that State. The well known dealer passed through Milwaukee on his return trip to Kiel.

Miss Marie Krienitz, sister of Harry W. Krienitz, the well known Milwaukee talking machine dealer, has returned from a trip to the western coast. Miss Krienitz visited the Seattle exposition.

The new Edison machine fitted with the Cygnet horn is proving to be a decided winner with the Milwaukee trade.

GETTING BACK TO BUSINESS.

F. K. Dolbeer, sales manager of the National Phonograph Co., Orange, N. J., who enjoyed his vacation at Lake George, N. Y., with his family, returned September 8.

Wm. Pelzer, vice-president of the company, takes a couple of days off occasionally in lieu of a regular vacation.

C. H. Wilson, general manager, has been on his farm near Saratoga, N. Y., and was at the factory again after Labor Day.

TRADE IN THE MONUMENTAL CITY.

Dealers Prepared to Handle Heavy Fall Trade —Holidays Hinder Business—August a Good Month—Numerous Sales of Outfits to Excursion Boats.

(Special to The Talking Machine World.)

Baltimore, Md., Sept. 6, 1909.

The local dealers are prepared to cope with the contemplated fall boom in the talking machine business which they expect to start soon after the middle of the present month. They say that every indication points to a big year in the sale of records and machines and that they have every reason to believe that the showing at the end of the winter will prove 1909-10 as a record-breaking year. The first part of September will probably be a bit slow, for the reason that many persons are still out of town, and, then, too, the dealers have observed Labor Day as a holiday, which makes the present week late in starting. They will also observe Old Defenders' Day on Monday, Sept. 13, and this will make business a bit slow for several days, but from that time on the dealers fully expect to be on the rush for the rest of the winter.

August, for the most part, proved rather a surprise for the dealers. This month is looked upon as the slowest in the year, but last month, according to the dealers, many excellent sales of machines were made, while the demand for records was every bit as good as the several preceding months. One reason for this was the same as that which kept up the sales during the earlier part of the summer, namely, the demand from Baltimoreans who are summering in the mountains and at quiet watering places. These demands were, for the most part, for the very latest popular hits, while there were also requests for some old songs and operatic selections.

The sales of machines were not so slow, either, for August. Albert Bowden, who looks after this end of the business for Sanders & Stayman, states that he disposed of quite a few high-priced Victors and Columbias in addition to a big lot of records. James Mather, who handles Victor machines at 774 Columbia avenue, also stated that the sale of these machines in the southern and southwestern sections of the city was brisk during August, while his prospects for the winter are very bright. The other dealers make similar reports.

One notable feature of the sales during August was the orders for the use of these machines on excursion and other boats going out of this port. There has been quite a boom in the trade in this particular all during the summer, which would seem to indicate that the talking machine is gradually replacing the pianos and other musical instruments as a means of entertainment while on the water.

TELL YOUR CUSTOMERS

What You've Got—Enquiries Reaching the World Office Prove That Dealers Are Not Keeping Their Customers Acquainted With Latest Developments.

Dealers and jobbers would do well to impress upon their customers that complete orchestra parts for accompanying Victor records can now be procured. Within the past two months The Talking Machine World has received more than a dozen letters from people (not in the trade) who have made inquiries whether it is possible to secure orchestral accompaniments.

It is clear that the dealers from whom these parties purchased records have been neglectful in informing their customers of the fact that a goodly list of orchestral accompaniments have now been published which are available for accompanying Victor records.

The dealer should send out a special circular letter to his customers bearing upon this subject.

And this reminds us that the dealers, when they get their advance list of records, should make a special selection of say four or five of the popular and classical numbers—that is records that have been carefully tried over by themselves, and then send out literature regarding these special records, inviting the customers to call and examine them. Or better still, express a willingness to call with them to the customer's house. These are days when it doesn't pay to wait to have business come to one; it is best to go after it.

SOME POINTERS FOR SALESMEN.

Get the Cheerful Habit—Reach the Personal Side of Your Customers and Make Them Feel at Home—Constant Study Helpful.

"It's easy enough to be cheerful when life flows along like a song," and after all it's not hard to be cheerful habitually if you take pains to get into the way of it. Get the habit.

The stronger personal hold you can get upon the customers of the store, the more money you will be worth to your employer.

Every clerk in a store is a link in the chain that holds that store's business. A chain is no stronger than its weakest link.

If you discover that customers don't like to have you wait on them, make up your mind that the days of your stay in that place are numbered.

You know how you feel when you go into a store and no one pays any attention to you. You think a long time before you go there again.

Study some branch of store work on the side. Learn to make sign cards, to write advertising, to display goods, to handle correspondence. It's a busy man who hasn't time to learn something.

Don't talk generalities about the goods you are describing to a customer. Get right down to the definite facts and specify and make plain every small point.

Successful salesmanship is based upon an intimate knowledge of human nature. Study your customers. Get acquainted with their individual characteristics and humor their fancies.

A FIRESIDE MACHINE equipped with a **LIN-O-TONE HORN** Makes a Perfect Combination

THE material from which the Lin-O-Tone is made, pure linen, gives better results acoustically than any other. The tone is round and full and marvellously natural. The Lin-O-Tone pleases not only the ear, but the eye as well. The horns are finished in either red, black or blue, gold striped and furnished with heavily nickeled ferrule. Make up your mind, Mr. Dealer, to sell a Lin-O-Tone with every Fireside and you will please your customer, and incidentally increase your profits.

PRESIDENT OF MEXICO MAKES EDISON RECORD

The Famous Soldier-Statesman of Mexico Consented at the Request of Thomas A. Edison to Make a Record for the National Phonograph Co.—The Interesting Communications Which Passed Between Them in This Connection—Record Will Prove of Great Interest in View of the Coming Meeting of President Diaz and President Taft and Will Have a Wide Popularity Among Spanish Speaking People the World Over.

In recognition of the genius of Thomas A. Edison, President Diaz, the soldier-statesman of Mexico, has made a record for the Edison phonograph, and to the Edison people now belongs the honor of having records by the presidents of the two great republics of North America. In view of the coming meeting of Presidents Taft and Diaz, this record should prove of great interest both in this country and Mexico, to say nothing of the Spanish-speaking world in general.

The signal success of the National Phonograph Co. in obtaining a record by President Diaz was largely due to the personal efforts of Mr. Edison, although the services of George W. Cook, one of Mexico's most prominent business men, enlisted in his behalf, were of no little value. George M. Nisbett, manager of the Mexican National Phonograph Co., distributors of Edison laboratory products throughout the Republic of Mexico, first realized the interest and importance of such a record, and at his suggestion Mr. Edison addressed a letter to President Diaz, as follows:

"Orange, N. J., July 8, 1909.

"My dear Mr. President:—Recalling the pleasure of my acquaintance with you in the early days of the electric light in New York, I wish to obtain, if possible, one or more phonographic records in Spanish of any matter that you may select, each preferably not over two minutes in length. These records, I am sure, would be eagerly received by your fellow citizens, and I have no doubt that they would create much interest in the United States, where your high character and distinguished services are so generally admired. Both President Taft and William J. Bryan have each made twelve records for us, which have been very favorably received by the public. If you would signify your willingness to oblige me, I will immediately take steps to have the records made in the best manner possible at any time and place that you may select. Accept, Mr. President, my best wishes for your health and prosperity, and believe me,

"Very respectfully yours,

"(Signed) THOMAS A. EDISON."

Complying with the above, President Diaz signified his willingness to have a record made. Regarding it the Mexican Herald of August 19 says:

"At the President's invitation, Messrs. Werner and Burt, experts from the recording laboratory of Thomas A. Edison, went to the castle of Chapultepec, where the records of the voice of General Diaz were made. The records thus obtained were extremely satisfactory, and the President expressed his pleasure at the successful conclusion of the affair, it being the only time that President Diaz ever spoke into a phonograph. By a happy coincidence, the records of the President's voice were made on the very same machine into which President Taft spoke when he made his famous series of speeches, prior to the late election.

"The records were shipped to the United States by a special messenger, who left the city last Monday evening over the National Railway. After they are reproduced in the laboratory of the Edison Company at Orange, they will be placed immediately upon the market. The work on them will be rushed in order to have the records on sale in the United States and Mexico in time for the meeting of the Presidents in October.

"The President, by his selection of the Edison phonograph for the recording of his voice, has shown his recognition of the genius of Thomas A. Edison, the inventor of this great instrument, which stands in a class by itself, being, in fact, the only machine on which records can be made at home at any time. As a teacher of languages, as well as a provider of home entertainments, this marvelous creation of the brain of Edison stands unrivalled among all other phonographs in the world to-day."

The President's reply to Mr. Edison's letter was in the form of a record, and this translation follows:

"Chapultepec, August 15, 1909.

"Thomas A. Edison, Orange:

"Esteemed and Good Friend:—Referring to your kind favor of July 8, like your good self, I also remember with pleasure the time when I had the satisfaction of knowing you and your wonderful experiments. At the same time I

PRESIDENT DIAZ OF MEXICO.

shared your firm faith in the great future of the physical sciences.

"I was in your country in the early days of the electric light in New York, and at that time I foresaw in you, the hero of talent and conqueror through work, one who would later make the fire snatched from the heavens by Franklin submit to discipline, in order that it might perpetuate here on earth, through your wonderful phonographs, the dear voices of our loved ones, reproducing all the rhythm, all the accents and all the modulations of human voice.

"I am pleased to comply with your request, for I hold in the highest estimation the great benefactors of humanity, and you are one of these; for you have created new sources of happiness, of well being and of riches for the human race, utilizing the most powerful forces known, light, electricity, labor and genius.

"Your friend, who grasps your hand with pride,

"(Signed) PORFIRIO DIAZ."

START IN "TALKER" BUSINESS.

Chase & West of Des Moines, Ia., Buy the Jones Piano Co. Stock and Become Victor and Edison Representatives.

Des Moines, Iowa, Sept. 4, 1909.

Chase & West, Incorporated, of this city, one of the largest and best known general house furnishing concerns in the middle west, have just started in the talking machine business on a large scale, becoming Victor jobbers. They have bought the entire Victor stock and rights of the Jones Piano Co., formerly Victor distributors. The stock invoiced in the neighborhood of $15,000.

The retail department occupies commodious quarters on the first floor and includes a Victrola parlor, manificently furnished, and two Victor and one Edison booth. The entire sixth floor is devoted to the wholesale stock and shipping departments, and the company have every facility for taking care of the needs of dealers in the best possible manner. They carry everything in stock that bears the Victor trade mark. J. W. Howard, one of the best known talking machine men in the State, has charge of the department. The company are confident of a very large fall trade and are making every preparation for it.

THE BATTLE AS CONDUCTED TO-DAY.

The face of the commander grew dark. The faces of the staff reflected their leader's anxiety. The correspondent of the great daily came a little closer. An aid rushed up. "General," he cried, "the enemy is advancing in force on our left wing!" The General's frown grew darker, and raising his field glass he peered long and earnestly toward the rear. "What in Sam Hill is detaining him?" he growled. "Are you waiting for reinforcements, General?" the correspondent somewhat timidly asked. "Reinforcements!" thundered the General. "Certainly not. I'm waiting for the moving-picture man, confound him!" At that moment the runabout bearing the picture machine whirled into position and the battle commenced.

A SALESMAN AND A CLERK.

A salesman is a person who takes the initiative in opening negotiations for an article sold. A clerk is one who is in charge of a stock of merchandise from which he fills the buyer's specifications.

BLACKMAN TALKING MACHINE CO.

J. NEWCOMB BLACKMAN, President

97 CHAMBERS STREET NEW YORK CITY

SIGNS DECREE IN "DUBBING" CASE.

Though Judge Chatfield's Decision in Suit of Columbia Phonograph Co. and Fonotipia Co. Against W. V. P. Bradley and the Continental Record Co. Was Filed August 7—What the Interlocutory Decree Says Upon the Question of Unfair Business Competition.

Though the decision of Judge Chatfield, Circuit Court of the United States, Brooklyn, N. Y., in the "dubbing" case was filed August 7 and published in last month's World, the decree was not signed until the 31st following. The suit is that of the Columbia Phonograph Co., General, New York, and the Fonotipia Co., Ltd., Europe, against W. V. P. Bradley, Brooklyn, N. Y., and the Continental Record Co. "in equity, unfair competition in copying sound records." The interlocutory decree says:

"It is adjudged, ordered and decreed * * * that the complainants have built up and are maintaining in this country a legitimate and valuable business and good will in the manufacture and sale of sound records containing musical selections specially executed for complainants, and said business constitutes a valuable property right, entitled to protection by a court of equity.

"The defendant, Winant V. P. Bradley, has caused copies or duplicates or counterfeits of complainants' said specially executed sound records to be made, the same having been designated 'Continental records,' and has sold said Continental records to the public as duplicates of the originals, and has thereby unfairly availed himself of complainants' property, and has to that extent diverted to himself the legitimate business which should and otherwise would go to complainants, to the injury of complainants' said business and good will.

"It is further adjudged, ordered and decreed that the said defendant, Winant V. P. Bradley, his associates, attorneys, privies, agents, clerks, servants and workmen, and each of them, be perpetually enjoined from either directly or indirectly copying or duplicating or counterfeiting for commercial purposes any sound record made, or put out, by the complainants or either of them, and from either directly or indirectly selling or offering to sell such copies or duplicates or counterfeits, and from in any manner either directly or indirectly by making, dealing in or handling said copies, duplicates or counterfeits attempting to divert to themselves, or otherwise unlawfully injuring, the business and good will built up and now maintained by the complainants as aforesaid.

"It is further adjudged, ordered and decreed that the said defendant, Winant V. P. Bradley, his associates, attorneys, privies, agents, clerks, servants and workmen and each of them deliver up to the custody of this court for destruction or such other disposition as this court may hereafter order, any and all of the aforesaid unlawful sound records (whether designated as 'Continental' or otherwise), and any and all matrices and other appliances for making the same, that may be in the possession or under the control of them or any of them, and likewise any and all advertising matter, catalogs, or the like, relating to said counterfeit sound records.

"It is further adjudged, ordered and decreed that this cause be referred to B. Lincoln Benedict, one of the masters of this court, for an accounting between complainants and the said defendant, Winant V. P. Bradley, with instructions to said master to report to this court with all convenient speed the extent of defendant's unlawful acts aforesaid, the amount of profits received, and likewise the amount of complainants' damages in the premises, and to this end the master is empowered and instructed to cause the defendant, Winant V. P. Bradley, to appear personally before him, to examine witnesses *ore tenus* and otherwise, to compel the production of books and papers, and is clothed with the usual powers of masters in accountings in equity.

"It is further adjudged, ordered and decreed that this court retain jurisdiction of this cause to enable complainants to bring in as party or parties defendant the manufacturer or manufacturers of the said unlawful 'Continental Records' when discovered.

"It is further adjudged, ordered and decreed that defendant pay to complainants the amount of profits and damages reported by the master, and that complainants have execution for the same and for their taxable costs and disbursements herein."

The same decree was also subsequently signed in favor of the Victor Talking Machine Co., Camden, N. J., who were likewise complainants at the same time, with such changes in phraseology as describe their goods.

SUPPLIES FOR VICTOR MACHINES.

Two New Products the "Victor Auxetophone Oil" and the "Victor Spring Oil" Is Supplied to the Trade by the Victor Co.—Latest Numerical Catalog an Imposing Issue.

(Special to The Talking Machine World.)

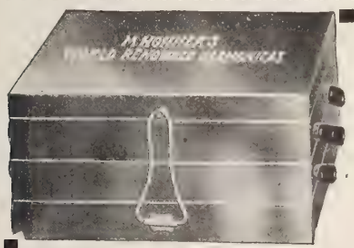
Philadelphia, Pa., Aug. 30, 1909.

Last week—Tuesday, to be specific—the Victor Talking Machine Co., Camden, N. J., issued a special letter to the trade concerning the care of Victor machines and Victor Auxetophones. In connection with the advice to keep the mechanism thoroughly oiled in their bearings with lubricants of the proper quality and standard, they announce two new products, namely, "Victor Auxetophone Oil," and the "Victor Spring Oil," with prices accompanying. Some pertinent and valuable advice is given by the company regarding lubricating the worm gears, winding-key, escutcheon and main springs.

A few days previous their Numerical Catalog, a numerical list of all records in the July record bulletin, was sent to Victor dealers, which is intended for the exclusive use of the talking machine departments of music dealers.

THE BIGGEST INVESTMENT.

If you are a good merchant the biggest investment you have is not in stock, but in the good-will of your customers.



No. 400—CLOSED.

HAVE YOU SEEN THE NEW C-D-C DEVICE?

It is really the greatest Harmonica-selling scheme ever put before the dealer.

THE C-D-C DEVICE consists of a three tray cabinet of the best seasoned wood, beautifully finished in a dark mahogany piano polish, and, when closed, resembles an elaborate jewel case. Owing to its novel arrangement and peculiar construction, it can be thrown open and closed in a moment's time. When the cabinet is open the Harmonica display is exceptionally attractive, exhibiting the entire contents of 38 Harmonicas at one time, and showing the instruments to great advantage. When closed, the complete cabinet occupies a minimum of space, being much less than a foot square. Thus, it will be seen what an ideal self-selling proposition this new Collapsible Display Cabinet is. The Cabinet costs you nothing, and besides, you are the gainer by over **50 per cent.** cash profit on your investment.

The C-D-C Device contains 38 pieces of the very best selling

HOHNER HARMONICAS

COLUMBIA WHOLESALE BUSINESS.

Reports of Strong Gains All Over the Country—Getting Big Slices of Department Store Trade—Some Recent Connections of Note.

The Columbia Phonograph Co. are receiving big slices of the department store business these early fall days. Reports from the wholesale department in the Tribune Building indicate an activity along this line with a record of big results. Exclusive contracts with initial orders running well into five figures are tossed off as quite an ordinary occurrence in the list of transactions recently booked.

Orders of no mean amount are on hand from R. H. Macy & Co., New York; Denholm & McKay (exclusive), Worcester, Mass.; Howland Dry Goods Co., Bridgeport, Conn. (exclusive); Houghton & Dutton, Boston; Rhoades-Haverty Co., Savannah, Ga. (exclusive); Jones Bros. (exclusive), Richmond, Va.; and Spiegel, May, Stern & Co. (exclusive), Chicago. In the announcement of their decision to handle the Columbia line exclusively, Spiegel, May, Stern have issued a strongly-worded statement commending the Columbia product.

A number of prominent music dealers have recently taken on the Columbia line.

The Southern California Music Co., of Los Angeles, one of the largest music houses in the West, recently ordered 30,000 Columbia double-discs as a starter.

An order lately received from Eiler's Music House, of Portland and Spokane, Oregon, foots up about $25,000 in records and machines.

Yeager Piano Co., Waterbury, Conn., one of the enterprising houses of the East, are now under the Columbia exclusive banner with an initial order of $5,000, and are extending the sales of the Columbia goods to many other parts of the state, as are also E. E. Forbes Piano Co., Birmingham, Ala., and Hollenberg Music Co. (exclusive), of Little Rock, in their respective territories.

Porch Bros., of Johnstown, Penn., who have been allied with the Columbia line for some time, are now rapidly disposing of a $5,000 order received a short while ago, and handle Columbia exclusively.

Out in Salt Lake City, the Daynes-Beebe Music House, "exclusive Columbia," has been doing business to the tune of $10,000 in Columbia goods during the past month, and Durval Music Co., Bluefield, W. Va., has just closed an order for $2,000 with exclusive rights.

August 23 John Macnabb, vice-president and general manager of the Universal Talking Machine Mfg. Co., Newark, N. J., went to Bradley Beach for a fortnight's vacation. Mac's family have been occupying a cottage at this pleasant Jersey coast resort for the summer, with the "head of the house" running in and out from business daily.

A BEAUTIFUL UDELL CATALOG

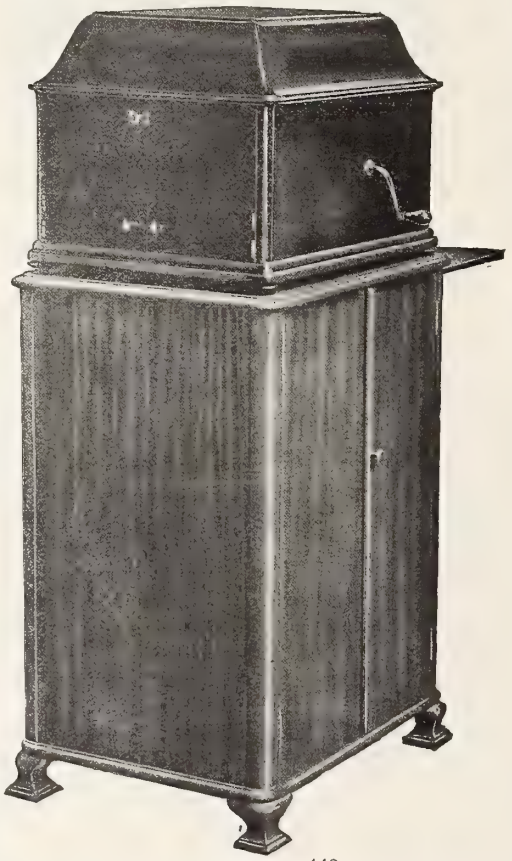
Is That Just Issued by the Udell Works, Indianapolis, Ind.—Contains a Very Complete Line of All Styles of Cabinets.

One of the handsomest and most satisfying catalogs ever put out by a house manufacturing cabinets is that just issued by the Udell Works, Indianapolis, Ind. It possesses many qualities that commend it, particularly the fine printing and paper used, and the manner in which the catalog is produced. The printing is of such a high order that an idea of the various woods used in the cabinets is clearly conveyed, although black is the only color used.

Then the construction of the volume merits praise in itself. It is divided into four sections, namely, "sheet music cabinets," "piano player roll cabinets," "cylinder record cabinets" and "disc record cabinets." Some very handsome designs covering all architectural schools are shown in each section. In fact, the styles are so complete and so varied as to satisfy the requirements of the most fastidious customer.

Among the designs illustrated is style 442, of which a cut appears herewith. This new cabinet is made to go with the new Victrola XII, and is superbly finished. It is 34 inches high, 24 inches wide, and 20 inches deep. It is made in mahogany. It will hold 190 12-inch disc records and matches in style and finish the Victrola XII.

The Udell Works have always been distinguished for the originality and attractiveness of their designs in cabinets, and we venture to say that no dealer can afford to look through this volume without placing an order. We would advise members of the trade whether dealing in pianos, music, or talking machines, to send for a copy of this new catalog, if they have not already received it. They will find an invaluable aid in satisfying the customers' demands for cabinets.



UDELL STYLE 442.

A rather unique feature of this catalog is the double cover, that on the outside being embossed, "The Udell Works, 1909-1910, Indianapolis, U. S. A." On the inside, within a very artistic border, appears the letter "U."

The Udell Works are entitled to the heartiest congratulations on the production of a volume so dignified and so complete as this. It gives not only an idea of the extent of their business, but is a veritable vade mecum to the talking machine dealer, or jobber, inasmuch as he is enabled by means of this volume to make a most comprehensive selection of stock.

The catalog is complete in every particular. Each style of cabinet is handsomely illustrated, tersely described, and a glance through the pages of the booklet will give either dealer or purchaser an excellent idea of the variety and beauty of the Udell products. The styles represented in the catalog tend towards simple elegance in practically every instance. In the cabinets for cylinder records fourteen distinct styles are shown, with different arrangements for holding records, in various capacities from 100 to 250 records. Seven of the disc record cabinets are fitted with clutches for holding the records in their original cartons, these styles being No. 512 to No. 519 inclusive. The other cabinets contain pasteboard pegs upon which the cylinders are placed after being removed from the cartons.

Thirteen cabinets are shown intended for the storage of disc records, including the new additions to the line, No. 442 holding 190 twelve-inch disc records and being finished in mahogany and Colonial designs to match the style and finish of the new Victrola No. 12.

CUTTING OUT BAD DEALERS.

Victor Co.'s Letter Defining Their Position in the Matter of Irresponsible Dealers—Eliminating the Undesirable Element—Helping "Live" Dealers.

(Special to The Talking Machine World.)
Philadelphia, Pa., Aug. 30, 1909.

A special letter was sent out by the Victor Talking Machine Co., Camden, N. J., to their distributers, Saturday, regarding their attitude toward unsatisfactory dealers throughout the country. The company state they have for some time been "cutting out" undesirable and irresponsible dealers—"dead ones," as they are termed—at the rate of about thirty-three and a third per cent. There have been months, the letter says, when as many as 200 to 300 of this class of dealers have been eliminated, and 150 or so live concerns substituted. The company, in directing the attention of Victor distributers to this effort on their part to vastly improve trade conditions—which has been accomplished by this drastic, yet polite procedure—urge upon them to be careful in signing Victor dealers that only reputable, responsible, progressive and aggressive merchants are selected. The company state they are making efforts to put the trade on a better and more beneficial basis as a pure business proposition, and it is their opinion their distributers should second and support this policy.

Leading distributers declare this is one of the best steps taken by the Victor Co. on their behalf, and that they will find themselves strongly supported. In other words, it is a good thing, and will be appreciated by every distributer in all parts of the country.

AN ADVERTISING POINTER.

A good method to insure satisfactory advertisements as to typographical makeup is to have the advertisements set up in some place where the equipment is right and the printer sufficiently skilful, and then mail proofs to the various papers in which the advertisement is to appear. Almost any printer can get good display if he has a diagram, even though the type in his office may not be the same as that shown on the proof. Good display depends more upon design, effects and the proper combination of the right sizes of type, than it does on any particular style or face of type. About nine times in ten one style may be substituted for another without seriously affecting the display.

BOUGHT BY DAVIDSON BROS.

Davidson Bros. have become proprietors of the Victor Talking Machine Shop, on Michigan avenue, Chicago, established by B. Feinberg, now on the wholesale traveling staff of the Columbia Phonograph Co., General. It is one of the finest equipped stores in the city, and the Messrs. Davidson are doing a nice business.

THE EVOLUTION OF A TRADE-MARK

Substitute the advertising department for the violinist, and in these six pictures you will have a very fair illustration of the successive processes through which the now familiar Columbia musical notes had to go before reaching perfection.

The original idea in the construction of this trade-mark was clear enough, but its working out was not so easy as might appear to the dealer who is using the tandem notes to attract attention to his own local advertising.

The fact is, the two notes as they now exist embody the very points originally sought for. The musical note is an object as familiar to every reader as a capital A. This is a music business, and it is music that is being sold. Therefore, the adoption of the musical notes in proper combination was an entirely legitimate and appropriate plan. Each of the first five musical note designs illustrated herewith were considered seriously before the sixth and present form was finally adopted. As it stands at present, these two Columbia musical notes have been widely commented on among advertising men as embodying a most striking combination of curves, vertical lines and angles—and the way these two notes project themselves from a newspaper page is evidence enough to anyone who has used them in his advertising that, for this purpose alone, their use as a trade-mark is well justified.

LINDSTROM & CO. ENJOINED

Against Infringing Berliner Patents—Action Brought by Victor Co. in U. S. Circuit Court.

Argument was heard Friday, August 13, on the motion to show cause why a preliminary injunction should not be granted against Carl Lindstrom & Co., New York, charged with infringing the Berliner patent by the Victor Talking Machine Co., Camden, N. J. The defendant appearing in the complaint was M. Boras, named as agent for Lindstrom & Co., in New York, known as one of the leading manufacturers of Germany, with headquarters in Berlin. The machine in suit was an exhibit, but an attempt to bring in a so-called mechanical feed device of another make was futile.

There appeared to be no great contention as to the similarity in operation of the Lindstrom machine and that of the Victor, the dispute being mainly as to whether Mr. Boras was an agent of his company in a sense that he could accept service of the bill of complaint. The defense, represented by Waldo G. Morse, held he was simply a selling representative, and therefore the complaint was technically faulty, and consequently should be dismissed. On the following day, Judge Hough, sitting in the Circuit Court of the United States, New York, granted the injunction, filing therewith the memorandum: "Order granted as to Boras individually and as agent of the company."

If there is absolutely no point upon which you can be enthusiastic about the store you're working in, find one with some symptoms of life about it and make a change.

VICTROLA AT CLUB RECEPTION.

A recent social function at the Nyassett Club, Springfield, Mass., owed a large part of its success to the fact that a Victrola recital was given, the latest red seal records being played. The outfit was furnished by Taylor's Music House, Springfield.

GRAPHOPHONE CO. MOVES.

The Graphophone Co., Albany, N. Y., jobbers for the Columbia line, have moved to handsome quarters at 123 Pearl street, that city, where they have a large and complete stock to meet fall demands.

Not to control, but to help others to control themselves—this is the fine art of managing men.

"NEEDLES"

MR. JOBBER: Have you investigated the merits of our Needles? Don't you know that Needles is one of the most important features of the Talking Machine business? Don't delay; get our samples and prices at once. Don't wait until the last moment. GET IN LINE.

TO HANDLE COLUMBIA BUSINESS.

The Southern Talking Machine Co., organized especially for the purpose, have taken over the Columbia Phonograph Co.'s store at Memphis, Tenn. Besides purchasing the stock, furniture and fixtures, they also placed a substantial order for new goods. They will be exclusive Columbia jobbers in contiguous parts of Tennessee, Kentucky and Mississippi. P. F. Pfiester, formerly manager of the Columbia Co., will occupy the same position in the new company.

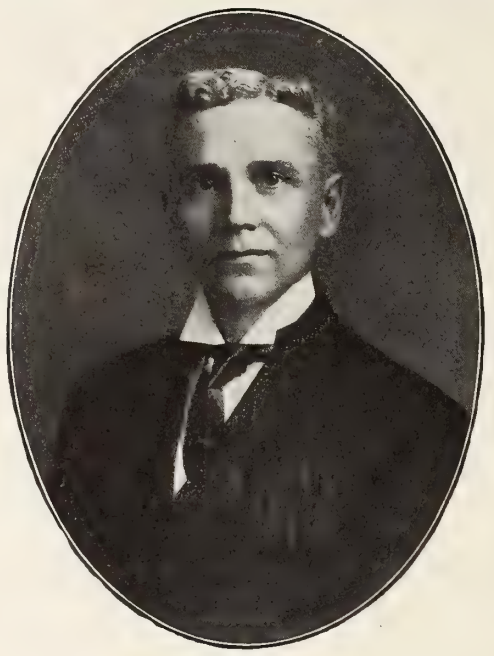
The good clerk need not worry. If he is a business producer, other store owners will be after him. He is bound to find his level.

A CHAT WITH WALTER STEVENS.

Manager of Export Department of National Phonograph Co. Holds Forth Upon the Business Outlook—The Edison Trade in Australia—Bringing Back Master Records Made in Mexico.

Recently Walter Stevens, manager of the export department of the National Phonograph Co., returned from a very enjoyable vacation. In an informal chat with The World the other day he said:

"I find everybody optimistic about the fall trade. Our export business is improving rapidly, and the indications are we will have about all we can handle during the fall and winter. We have just received a report from Australia stating that the Edison business there has been



WALTER STEVENS.

the largest in the history of our company. You know we ship by the cargo to that part of the world.

"Messrs. Werner and Lee, who have been making records in Mexico since spring, get back this week, and they bring with them a large number of the best records they ever made; in fact, they are splendid and comprise selections of the best talent, vocal and instrumental. The work of these two experts improves more and more on every visit they make to Mexico. This time it is better than ever.

"You know the Mexicans are a musical people, and great attention is given this branch of study in their educational program. Every town has its band no matter how small, with the band-stand in the most prominent spot, where crowds gather every evening to hear the playing. Not a few of the musical organizations of Mexico have a world reputation, and in point of general excellence equal our own best known bands.

"It is the ambition—and a laudable one—of every man, especially in the middle class, to become a member of the local band. It is a great distinction, as these organizations are held in high esteem and socially they have the entree and are treated royally wherever they go. It is for this reason that Mexico is a great talking machine country, and records command a large and ready sale."

REMODELED QUARTERS OPENED.

The Columbia Co. Open Their Handsome Establishment in Philadelphia With Thos. K. Henderson in Charge—To Conduct Active Campaign for Fall Business in This Section.

(Special to The Talking Machine World.)

Philadelphia, Pa., Aug. 30, 1909.

To-day the renovated, remodeled and redecorated and refurnished quarters of the Columbia Phonograph Co., 1109 Chestnut street, were reopened with Thomas K. Henderson, well known in the music roll business and more particularly from his connection as a traveler on the Columbia wholesale force out of headquarters in New York, as manager. He succeeds J. A. Gouldrup, who takes up other duties elsewhere in the company's service. Mr. Henderson, who will hereafter make Philadelphia his permanent home, has had the premises rearranged with a direct view of carrying ample stock for supplying dealers in his territory.

In fact, Philadelphia will be the distributing point for the trade of eastern Pennsylvania, and therefore particular attention was paid to providing facilities for this purpose, and the place is considered one of the best appointed in this respect in the country.

A POTENT RAINMAKER

Is Thos. A. Edison According to the Truthful Scribes of Winsted, Conn.

Thomas A. Edison had occasion to visit Winsted, Conn., the other day, and the moment he struck the town there burst upon the place the worst electrical storm known in that section during the summer. A dispatch which tells the story says: "For several weeks every one here had hoped and prayed for rain. It remained for Mr. Edison to break the drouth, and his entry into Winsted was a signal for a heavy downpour, accompanied by vivid flashes of lightning and terrific thunderclaps." Of course the simultaneous arrival of Mr. Edison and the storm was a mere coincidence, one having nothing to do with the other. But the humorists will have their joke and the great inventor will be hailed as a potent rainmaker. And in a less enlightened and more superstitious age there is no doubt that such an incident would have clinched a man's reputation as a worker of wonders.

YOUR HARDEST COMPETITOR.

Your hardest competitor is not the man who undersells you, nor is he the man who underbuys you. But he may do both of these. The competitor you need most to fear is the man who uses brain plus energy plus system to keep things moving all along the line—always. Competition is no longer so much a matter of price as it is a matter of brains.

The slovenly show window has a hammer out all the time for the store; it will knock any business.

It does not benefit a clerk to bewail the fact that his employer is not as energetic as his competitor; that he does not carry so good a line as his trade opponents. The clerk must succeed, regardless of disadvantages in his support. He must do the best he can with the tools that are supplied him. He can't build his own trade with the other man's goods.

The proof of the ad. is in the pullin'.

MUNSON FOLDING HORN

FOR DISC AND CYLINDER MACHINES is the only one-piece indestructible Folding Horn on the market. Made of the finest quality of selected Leatherette—in plain solid colors—Gold, Black or Red, inside and out.

WHEN FOLDED AND CARTONED it occupies a space only 28 inches long by 3½ inches square.

THE MUNSON FOLDING HORN

Greatly improves the tone of the records and means increased record sales. Retails $7.00

Further Particulars and Discount Sheet on Application.

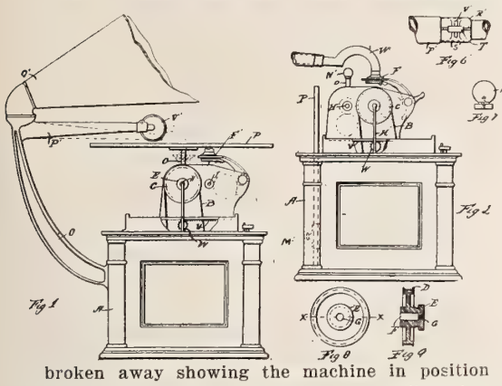
LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)
Washington, D. C., Sept. 10, 1909.

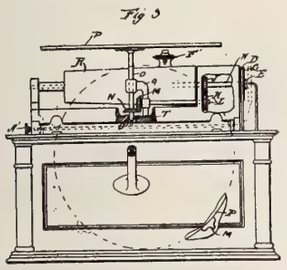
TALKING MACHINE. Fred Shaffer, Vandergrift, Pa. Patent No. 929,505.

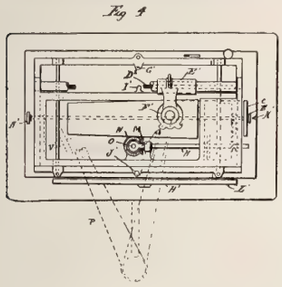
This invention relates to an exceedingly simple and effective device whereby either disc or cylinder records may be used upon the same machine.

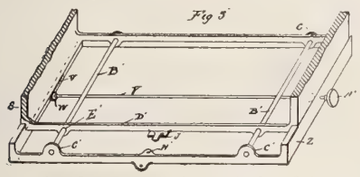
Fig. 1 is an end view, parts thereof being



broken away showing the machine in position for playing disc records. Fig. 2, a similar view showing the machine in position for playing cylinder records. Fig. 3, a rear view of Fig. 1, parts of the machine being broken away to more clearly show the operating parts. Fig. 4, a plan view showing the arm carrying the reproducer in dotted lines. Fig. 5, an enlarged perspective view of the frames showing the shifting mechanism. Fig. 6, a view in elevation of the clamp for adjusting the disc reproducer to the tapering arm of the horn. Fig. 7, a view in elevation of a knob or shield to be placed at the end of the disc or cylinder

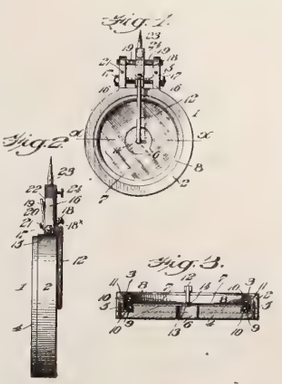






shaft. Fig. 8, a face view of the drive pulley, and Fig. 9, a section at the line X—X of Fig. 8.

SOUND BOX FOR RECORDING AND REPRODUCING MACHINES. William W. Zackey, Philadelphia, Pa., assignor of forty-nine one-hundredths to Chas. B. Hewitt, Burlington, N. J. Patetn No. 930,715.

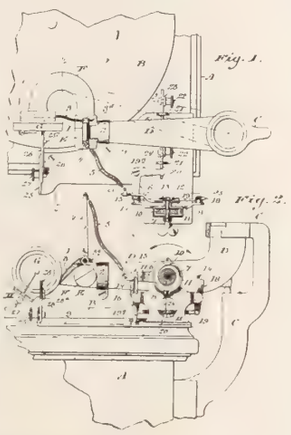


In sound boxes for recording and reproducing machines, as heretofore constructed, the regulation and control of the vibrating member or diaphragm has not been such as to insure the production of the clearest, purest tones and the reproduction of perfect articulation and the like, while at the same time maintaining a desirable volume of sound. Even a near approach to a pure tone has only been accomplished by sacrificing sound volume and vice versa.

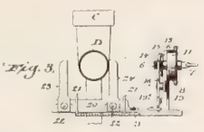
In the present invention there has been devised a novel stylus supporting means and diaphragm securing devices whereby tone volume and tone quality have a direct relation one to the other and in which the stylus and its adjuncts may be manipulated as desired for a minimum or maximum volume while the tone quality is appreciably affected.

PHONOGRAPH. John C. Nernberg, Athens, Wis., assignor of one-half to Claude F. Hamilton, same place. Patent No. 930,683.

The object of this invention is to provide a simple and effective repeating attachment for disc phonographs, its construction and arrangement being such that when the swinging-arm of a phongraph has completed its travel in the reproduction of a record, the said arm is lifted by the repeating device, returned to the starting point upon the record, and then gently lowered in such a manner that the pin is set upon the record without causing any damage to the same.



In the drawings Fig. 1 represents a plan view of a fragment of a disc phonograph having attached thereto a repeating device embodying the features of this invention, parts being broken away and parts in section to better illustrate the details; Fig. 2, an elevation of the same with parts broken away and other parts in section to more clearly show the structural details; Fig. 3, a detail sectional view of the apparatus, the section being indicated by line 3—3 of



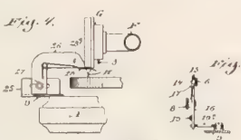


Fig. 1; Fig. 4, a detail cross-section of the apparatus, as indicated by line 4—4 of Fig. 1; Fig. 5, a detail sectional view as indicated by line 5—5, showing an elevation of the repeater, motor and connected mechanism, and Fig. 6, a detail sectional view, as indicated by line 6—6 of the preceding figure.

FEEDING DEVICE AND BRAKE FOR SOUND-REPRODUCING MACHINES. Frederick Sheppy, Chicago, Ill., assignor by mesne assignments to Hawthorne & Sheble Manufacturing Co., Philadelphia, Pa. Patent No. 929 253.

The chief objects of this invention are to provide a brake for talking machines that will automatically stop the record movement by frictional contact of the brake member therewith at the termination of the sound reproduction; to provide an automatic record brake for talking machines that can be readily attached to the instrument without disfiguring the casing or marring the finish in any way, and to produce an effective automatic brake for the purpose stated that is so designed that it will be equally effective when applied to instruments of different sizes.

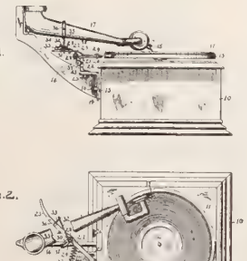

Fig. 1 is a side elevation of a talking machine with improved automatic brake attached thereto; Fig. 2 is a plan view with a portion of the swinging arm broken away to disclose the parts of the mechanism beneath; Fig. 3 is a plan view showing the brake-shoe in engagement with the periphery of the record disc, the stylus having been disengaged from the record groove; Fig. 4 is a front view of a sound-reproducing instrument showing method of attaching the automatic brake, and Fig. 5 is a perspective view of the clip for supporting the brake lever.

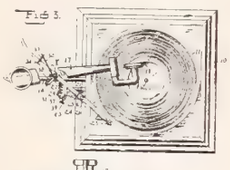
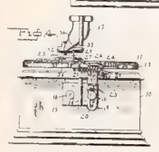
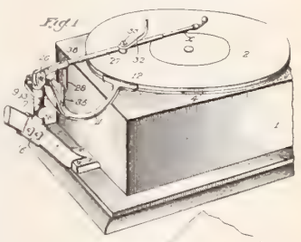
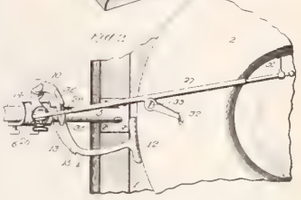




BRAKE MECHANISM FOR TALKING MACHINES. Guadelupe Buelna and Arthur E. Burson, Santa Barbara, Cal. Patent No. 930,038.

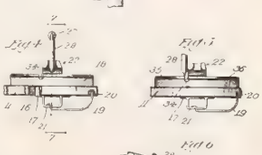
One of the objects of this invention is to provide an automatic braking mechanism for disc talking machines, which is actuable by the movement of the sound box carrier arm instantaneously upon contact, thereby to avoid destruction of the stylus by continued rotation of the disc, and all possible damage liable to be occasioned by the stylus following the path of the waves on the inside of the record, which waves or indentions are usually rough and coarse.





Another object of this invention is to eliminate all mechanism hitherto employed for this purpose for elevating the sound-box immediately upon the completion of the reproduction of a record, and to cause the brake to act on the rotating disc carrier synchronously with the completion of the travel of the stylus in the sound waves of the disc.

In the drawings Fig. 1 is a perspective view of this invention applied to a talking machine. Fig 2 is a fragmentary top plan view. Fig. 3 is a fragmentary detail showing the adjustable slide and spring for preventing same from slipping. Fig. 4 is a fragmentary detail partly in section showing the brake releasing stud in the guide preparatory to setting the same for actuation.



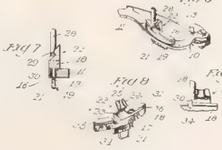


Fig. 5 is a similar view showing the position of the brake releasing stud after actuation by the sound box carrier arm. Fig. 6 is a fragmentary perspective showing the brake actuating spring and the position of the brake releasing stud after the brake has been thrown. Fig. 7 is a fragmentary vertical section on lines 7—7, Fig. 4. Fig. 8 is a perspective detail of the adjustable slide, and Fig. 9 is a fragmentary detail showing the position of the brake releasing stud preparatory to releasing the brake.

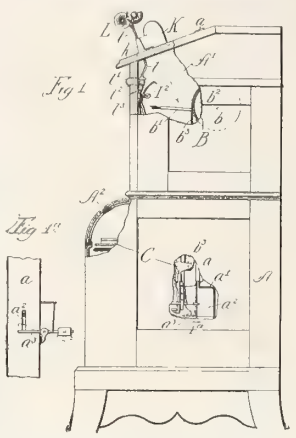
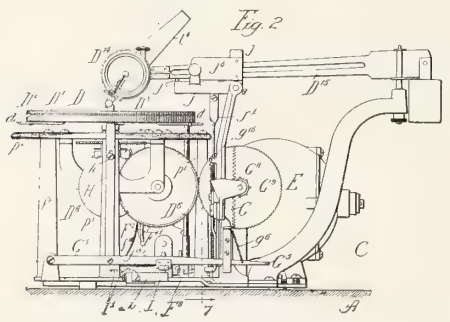
PHONOGRAPH MACHINE. Herbert S. Mills, Chicago, Ill. Patent No. 929,775.

The primary object is to provide a machine wherein provision is made for winding the spring which serves to actuate the record of a phonograph by means of a motor which will operate for a predetermined period of time, when set in motion, thereby to give to the spring serving to actuate the record a predetermined tension.

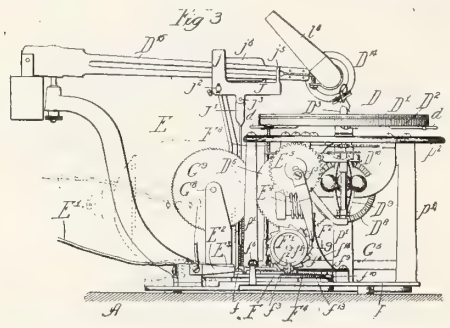


In the accompanying drawings this invention is shown embodied in a combined picture-exhibiting and phonograph machine, the phonograph being of a well-known type employing a disc form record.

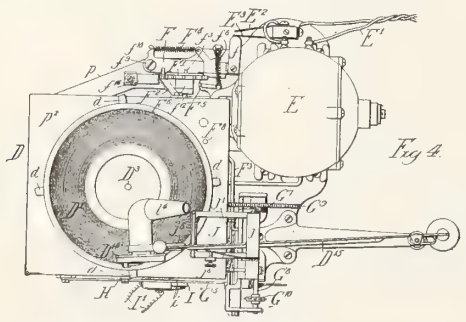
In the drawings Fig. 1 represents a side eletional view of an improved machine, portions of



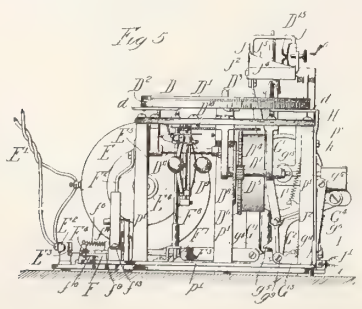
the casing being broken away to expose a part of the picture-exhibiting device and portions of the phonograph; Fig. 1a, a detail of a vibrative counteracting device employed in connection with



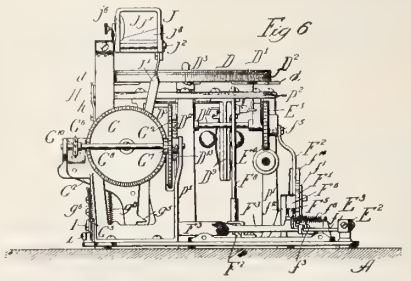
a stop-actuating lever, which lever may be actuated by a coin or in any other suitable way; Fig. 2, a side elevational view of the phonograph and the mechanism connected therewith, shown



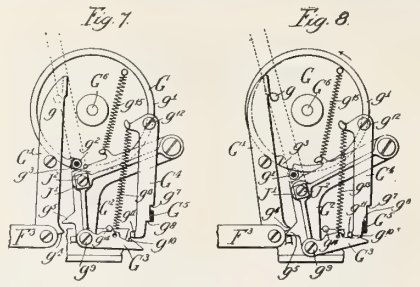
as removed from the casing; Fig. 3, a reverse side elevational view of the same; Fig. 4, a plan view of the same; Fig. 5, a front view of the same; Fig. 6, a rear view of the same; Fig. 7, a broken section taken as indicated



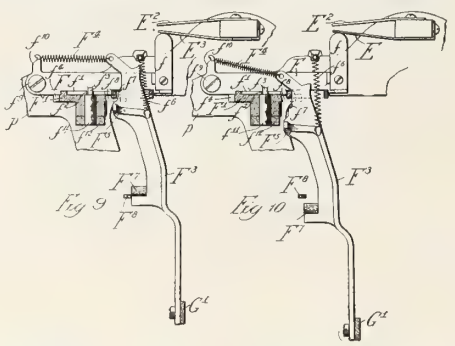
at line 7 of Fig. 2, showing a controlling wheel which serves to control the circuit of the electric motor shown and the stop-actuating lever mentioned, said view showing also the operative parts



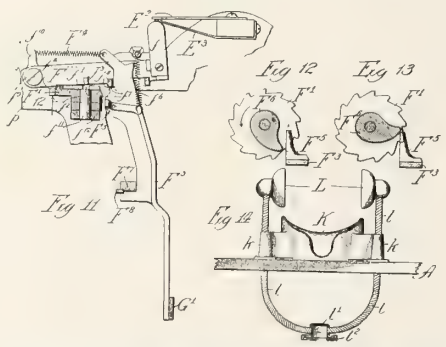
adjacent to said wheel; Fig. 8, a similar view showing a different position of the parts; Fig. 9, a broken sectional view taken as indicated at line 9 of Fig. 3 and showing the construction at



and adjacent to the contacts of the motor circuit; Fig. 10, a similar view showing the parts in a different position; Fig. 11, a similar view showing the parts in still another position; Fig. 12, a



broken section taken as indicated at line 12 of Fig. 11; Fig. 13, a similar view showing the parts in a different position; Fig. 14, a detail of the eye and ear pieces of the machine; Fig. 15, a bottom



plan view of the record-carrying disc showing the yielding stops thereon adapted to engage with the stop actuated by the lever mentioned above; Fig. 16, a detail of the record-actuating shaft;

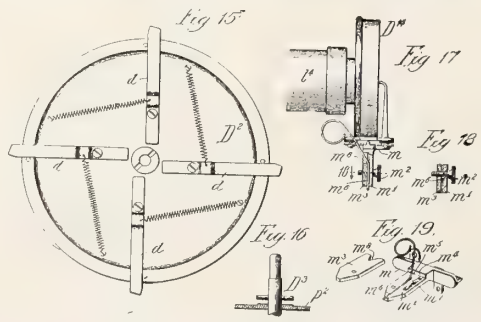


Fig. 17, a broken sectional view showing a detail of the phonograph stylus, the section being taken as indicated at line 17 of Fig. 2; Fig. 18, a section taken as indicated at line 18 of Fig. 17, and Fig. 19, a perspective view of the stylus-holder with the clamping-jaws thereof separated.

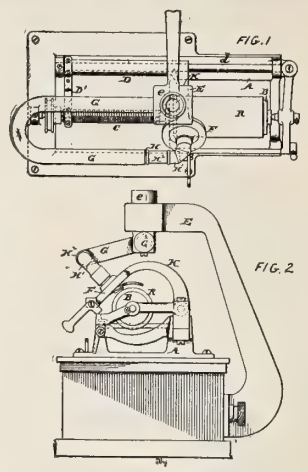
SOUND-REPRODUCING MACHINE. Morris Keen, Philadelphia, Pa. Patent No. 929,859.

The object of the invention is to provide a sound-reproducing machine of the phonograph type, which means whereby the sound box or reproducing head may travel longitudinally over the length of the record cylinder and at the same time the distribution of the sound be made by a horn supported in a fixed position, the result being that the weight of the horn is not carried to any extent by the sound box carriage and does not interfere in any way with the operation of the reproducing apparatus. By supporting the horn separately in a machine of this class it may be adjusted at any angle or position. The weight of the horn being removed from the sound box carriage, the latter travels more smoothly and with less power. The adjustment of the machine is more easily effected and in general the apparatus is more stable and easily manipulated.



This invention consists in providing a stationary bracket or arm wholly supporting the horn and combining therewith an adjustable tubular connection between the traveling sound box and the stationary bracket for transmitting the air vibrations to the fixed horn when embodying the general features of construction.

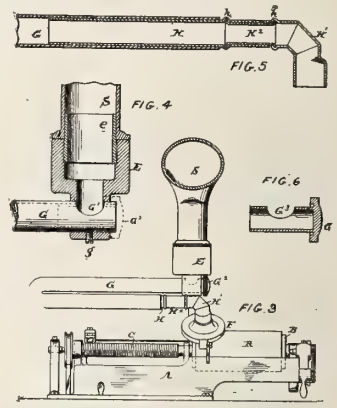


Fig. 1 is a plan view of a sound-reproducing machine embodying this invention; Fig. 2 is an end elevation; Fig. 3 is a front elevation; Fig. 4 is a sectional view showing the connection of the adjustable tubular arm and bracket; Fig. 5 is a sectional view of the adjustable tubular connection or arm, and Fig. 6 is a cross-section of the plug for adjusting the sound opening to the horn.

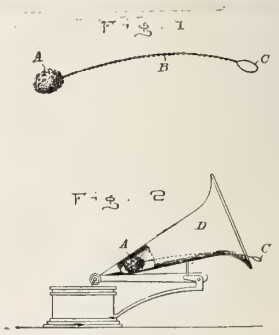
SOUND MODIFIER FOR PHONOGRAPHS. James Pearson, Denton, Neb. Patent No. 929,482.

This invention relates to certain new and useful improvement in sound modifiers or mufflers, more especially for use with phonographs, graphophones and the like. It has for its object more particularly to simplify construction, to facilitate the application of the instrument for use and provide for the ready and effective retention thereof in position when so applied.



In the accompanying drawing embodying the invention Fig 1 is a perspective view thereof. Fig. 2 is a view in elevation of an instrument of the sound-producing type termed the graphophone, including its horn or megaphone, having the invention applied thereto.

PHONOGRAPH. Peter Weber, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 932,200.

This invention relates to a phonograph having interchangeable means for changing the relative speed of the feed screw with respect to the mandrel in a definite ratio so as to adapt the phono-

graph, when provided with the ordinary sound box carrier driven from the feed screw in the usual manner, to operate upon phonograph sound records having either one hundred or two hundred threads to the inch, or sound records bearing any other definite relation to each other as regards the pitch thereof.

It comprises improved means for gearing together the mandrel and feed screw shaft, so that the relative speeds thereof may be varied by a very simple change of gearing, the change gearing being added to the frame of an existing phonograph adapted to operate upon records having one hundred threads to the inch or any other single definite gear ratio between the mandrel and the feed screw shaft, the frame and other existing elements of the existing machine being changed by this invention as little as possible.

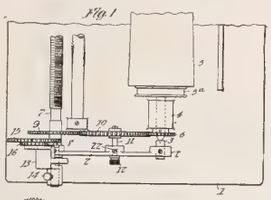


Fig. 1

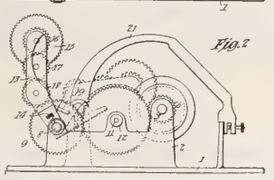

Fig. 2

Fig. 1 is a plan view of a phonograph of well-known form to which the invention is applied and Fig. 2 is an end elevation of the same.

PHONOGRAPH. Peter Weber, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 932,201.

This invention relates to phonographs of the type wherein the sound box is carried on a traveling carriage to which a progressive movement is imparted by means of a rotating feed screw, so that the reproducer or recorder stylus traces a spiral path with respect to the record surface. It has been the usual practice for many years to provide a feed screw of fine pitch which will advance the traveling carriage a distance of one one-hundredth of an inch for each revolution of

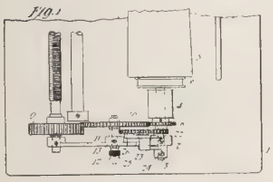

Fig. 1

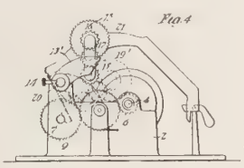

Fig. 4

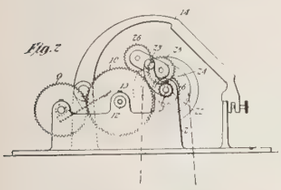

Fig. 2

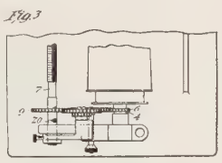

Fig. 3

the mandrel. More recently, however, it has been found possible to manufacture a sound record in which the record groove has two hundred turns or threads to the inch, so that it is desirable to provide a phonograph in which the feed of the carriages will be suitable for operating upon a record of this description. In view of the fact, however, that there are already thousands of phonographs in use in which the feed screw advances the carriage one one-hundredth of an inch per mandrel revolution and a vast number of records are also in use having a pitch of one one-hundredth of an inch, it is desirable to provide means which may readily be applied to such phonographs whereby the feed screw may be driven at one-half the speed at which it has been heretofore driven, such means also permitting the driving of the feed screw at its usual speed, so that the phonograph can be used interchangeably with sound records having either one hundred or two hundred threads per inch, and the invention has for its object the provision of interchangeable means of this character which may be readily applied to a phonograph and in which, when so applied, the parts may be readily shifted with respect to each other, so as to drive the feed screw at the desired rate of speed.

Fig. 1 is a plan view showing a portion of a phonograph constructed in accordance with this invention; Fig. 2 is a side elevation of the same, and Figs. 3 and 4 are similar views illustrating a modification.

PHONOGRAPH. Peter Weber, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 932,202.

This invention relates to phonographs of the type wherein the sound box is carried on a traveling carriage, to which a progressive movement is imparted by means of a rotating feed screw, so that the reproducer or recorder stylus traces a spiral path with respect to the record surface.

For its object the provision of interchangeable means of this character which comprises an extra or auxiliary feed screw which may be readily applied to the present type of phonograph, and means which may also be readily applied, whereby the sound box carriage may be operatively connected with each of the feed screws and fed at either of the desired speeds, and by which the operative connection of the traveling carriage may be readily shifted from one feed screw to the other, indicating means being preferably provided in connection with the means for shifting the said connection for indicating the rate at which the carriage is being fed, or, in other words, the type of record with which the phonograph is operative in either of the positions which the said shifting means occupies.

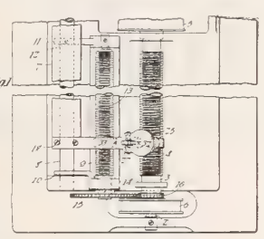

Fig. 1

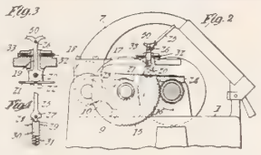

Fig. 3

Fig. 2

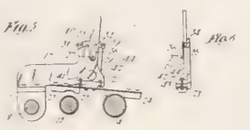

Fig. 3

Fig. 6

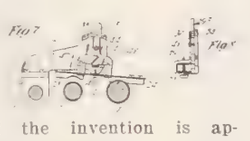

Fig. 7

Fig. 8

Fig. 1 is a plan view of a portion of a phonograph to which one form of the invention is applied; Fig. 2 is an end view of the same, partly in section; Fig. 3 is a detail side view of a portion of the mechanism for shifting the operative connection of the traveling carriage from one feed screw to the other; Fig. 4 is a similar view showing another detail of said mechanism; Figs. 5 and 6 are side and edge views of a modified form of operating connection between the traveling carriage and the two feed screws, and Figs. 7 and 8 are views of another modification.

TALKING MACHINE. Alfred Keller, Ste. Croix, Switzerland, assignor to Mermod Frères, same place. Patent No. 930,294.

This invention relates to improvements in talking machines, and has particular reference to the producing and magnifying mechanism. Certain features of construction, notably the clutch feeding mechanism, are from a broad standpoint disclosed in prior application, Serial No. 395,945, and is broadly claimed therein.

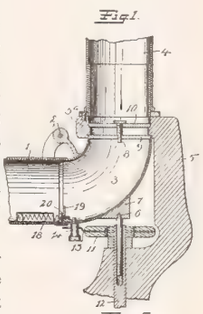

Fig. 1.

certain features of construction; Fig. 4 is a plan view of certain other features of construction; Fig. 5 is a plan view of the friction clutch.

One of our facetious contemporaries has prescribed the following recipe for Irene Raymond, the vaudeville artist, and it doubtless could be taken with material benefit by a number of others in the same line of work: "Swallow one Caruso phonograph record three times a day, before and after meals. If she'd try this for twenty-three years, seven months and three seconds, perhaps by that time there'll be a slight improvement noticed in Irene's vocal accomplishments, which now resemble a guttural fox horn note and a bellow of a lion combined."

CREDIT IS CAPITAL.

A Good Name That Will Command Credit Is Oftentimes Better Than Unlimited Funds When Starting a Business—Some Pointers That Talking Machine Men Should Bear in Mind When Thinking of Expanding.

A business man who is now getting along very nicely was telling about the uphill fight he had because of the fact that he started with so little capital.

"How much did you have?" he was asked, and the man replied, "A thousand dollars."

He meant a thousand dollars in money, but a little further questioning revealed the fact that he had been able to get credit for two thousand dollars' worth of goods right at the start.

"Well," said a listener, "then you started on three thousand dollars capital, of which you furnished one-third and other people furnished two-thirds. The chances are that the other people never stopped to consider that they were furnishing you two-thirds of your capital, just as you have never been able to see it in that light. But they were. And there are thousands of people in business who don't realize that what they consider their capital is really a very small part of it.

The man with a new device believes it is good and that people will want it. They undoubtedly will want it after he tells them what he has and after he has sold some. But before any profit can be made good will must be established, and the only way to establish good will is by spending money.

The same is true of a new store. The man who starts it may have figured correctly in sizing up the location and the field. There may be an urgent need for a new store on his particular corner and there may be grave faults in the methods of older houses with which he will compete, but if the man thinks that the first day's sales will establish the store on a paying basis he has missed his guess.

Probably the solution lies in the increasing knowledge of scientific credit making. The time will never come when a great part of all business done will not be on capital furnished by others. As long as one business allows another to purchase without paying on the spot, then the first business will be supplying the second one with capital.

But it may be that if firms generally realized what a credit obligation actually means they would be more careful about incurring them.

Obtaining credit simply means that you are using another man's money. The man who sells you goods on credit is as truly supplying you with capital as is the bank that advances you money, and you are as morally bound to consider well his chances of obtaining repayment as you are to ponder carefully when you think of incurring an obligation at the bank.

There is altogether too much bankruptcy and receivership business in this country. And if, as Bradstreet points out, only eighteen failures out of every thousand are due to competition. 342 out of every thousand are due to so-called lack of capital is entirely too many.

It means that too many people are ready to take a chance on capital that somebody else furnishes. A large part of those 4,788 failures were simple gambles.

PROTECTING FILM MAKERS.

Judge Chatfield's Famous Decision Refers to Films and the Practice of Duplicating Them—A Lucid and Convincing Statement.

It is hard to realize the far-reaching effects of the decision handed down by Judge Chatfield in the United States Court in the Eastern District of New York on August 7th regarding the "dubbing" of talking machine records. The decision establishes a precedence in all lines where unfair business competition is a factor.

One trade affected by this decision is that embracing the manufacture of moving picture films. It has been the practice where one concern has made films at great expense for other smaller companies to duplicate that film simply at the cost of the actual photographic work and offer it on the market at reduced prices. The Judge in his decision had the following to say regarding this practice:

"Reference has been made to the rights of a photographer who should make a film for moving pictures of some historical or unique occasion and should sell the film to parties who should reproduce it in a moving picture machine. Other parties might make pictures from the film, or from the exposures, and a question in some respects similar to the present might be involved."

The Judge broadly sustains the contention that, quite aside from patents, trade marks and copyrights, but under the doctrine of unfair competition, the incorporeal and intangible rights arising out of a lawful business will be protected by a court of equity from unlawful use and appropriation by those who seek to profit by the original labor and legitimate investment of others.

ROLLER SKATES IN ENGLAND.

Craze Still at Top Notch and Busy Winter Looked for—Skating Growing in Popularity on the Continent.

The roller-skate craze that recently took possession of all England has by no means subsided. Skating on the little wheels has been sustained throughout the summer months this year almost for the first time.

Outdoor skating when weather permitted has been indulged in, and several temporary summer buildings were put up in popular seaside resorts, so that those who had become enthusiastic skaters on rollers during the winter might continue to enjoy the sport during the summer months. Everything points to the fact that there will be a great revival in October, when the winter rinks will again be thrown open to the public.

The continental cities, too, are now falling under the influence of the spell. An immense Moorish Palace is just being erected near Holland Park, in the western district of London, at a cost of £15,000, and as an evidence of the widespread interest in roller skating, it is stated that a special room is to be set apart for business men, where typewriting can be done and letters written. One manager says that he had placed orders for 33,000 skates, and that shortly his rinking equipment would amount to 135,000 pairs.

UNLABELED IMPORTS HELD UP.

Fail to Comply With New Tariff Law—Customs Business Growing.

As the result of the stringent provisions of Section 7 of the new tariff law regarding the labeling of merchandise of foreign origin, many importations, aggregating hundreds of thousands of dollars, are detained in the Seizure Room at the Appraiser's Warehouse, awaiting compliance with the revenue act.

It is said that the failure of the exporters on the other side to comply literally with the labeling provision of the law is due to the fact that copies of the tariff act have scarcely had time to be copied into the various foreign languages and generally distributed abroad.

Importations under the new tariff are increasing rapidly, according to a statement issued yesterday by George W. Wanamaker, Appraiser of the Port. The Appraiser's report, which is for August, shows that the total appraised value of foreign merchandise entered at this port last month aggregated $74,477,521, compared with $53,061,629 the same month one year ago.

REGISTRY SLOT MACHINE.

Paris Has One Which Registers Letters—You Drop in Five Cents.

The French Government has just introduced for use an ingenious automatic device for registering letters. The letter is dropped into a box and a nickel piece, purchasable for 5 cents, placed in the slot. The crank is turned, a numbered receipt falls out and the corresponding number is stamped on the letter.

The ingenious feature of the machine is the device for preventing the use of any except the nickel coin. This is accomplished by means of a magnet which attracts only iron and nickel, the latter very feebly. But the slight attraction of the nickel is neatly calculated, and as the coin falls the attraction is just sufficient to retard it and makes it fall into the pocket which operates the mechanism. An iron piece, on the other hand, would be strongly attracted, miss the pocket and be ejected. All other coins are also ejected.

If your business is rightly planned you have no competitors.

Your business is the trade you earn, and from that viewpoint no one can take it away from you.

But some people try to get business without earning it.

They are troubled with competitors and about everything else on earth.—Seth Brown.

IMAGINATION IN BUSINESS.

As Valuable if Not as Essential as Any Other Art Employed in the Process of Winning Success in the Commercial Field.

L. F. Leland, who is the author of a number of interesting talks on business subjects, is a great believer in the value of imagination in business. He said recently: "I believe that imagination is as valuable—I do not say as essential, but as valuable—in the management of trade as in any of the arts. It is as valuable, it is as applicable, and with the single exception of the art of literature it is as essential.

"Imagination, then, is the ability, upon seeing any object, to construct around that object its probable or possible environment; thus, apprehending any force, to realize what produced it and what it will produce. The man of imagination writes a drama. His dramatic instinct apprehends the power of contrasts; he constructs a plot he realizes what each person will do and why he will do it. His characters take possession of his will; they act out their own destiny—often against their author's own desire. He relates it all together.

"It must be remembered always that it is not the price of an article which is important, but the *reason* for the price. This is one of the backbone truths of merchandising, and when once a seller gets a firm hold of this fact and is able to apply it in its highest efficiency he can almost devastate the trade. I have seen on more than one ocasion the delight with which a retail advertiser first clearly grasps this idea. We can detect something of it in one of the illustrations just used; but now what is the reason which underlies this law? Is it not this: That the argument for the price is the imaginative part of the transaction; the price itself is absolutely unimaginative. Admit that the reason for the price is an important thing in the transaction, and that a high price with a good reason will sell more goods than a low price with a poor reason, and it is only reaffirming, in another form, the potentiality of the imagination in business.

"The bankrupt stock, the fire sale, the manufacturer's remnants, the annual clearance, the removal sale, the dissolution-of-partnership sale—what are these, and many more, but arguments for the price? And note this one point: that without the argument the price is powerless. Reduce your fur-lined overcoats from $100 to $60, and your liberal discount attracts little attention. Why? Because there is no reasonable explanation for the reduction. Why should you present overcoats to the public? But announce that, owing to an expiration of your lease and the imperative command that you vacate your present store within two weeks, you will reduce the price of your fur-lined overcoats from $100 to $80, and you may sell easily all you have to offer."

IT PAYS TO DO A GOOD DAY'S WORK.

When we have done a good day's work we are satisfied and at peace with the world and ourselves, no matter how tired we may be; but when we have shirked we are ill at ease, says J. E. Clark. Even if we promise ourselves that we will do better to-morrow, we are still troubled. Why? Because somewhere deep down in our hearts we know that we have lost a part of the day—let run to waste some of the stream of gold—and, of course, that is forever gone. When we have so worked that we can go to our resting places at night with a feeling that we have done not only enough to escape censure from our superiors in office, but that we have done an honest day's work at our appointed tasks, and that we have besides made good use of our spare moments in learning something which shall advance us, we gain trebly. We gain the immediate profit, the future profit and the better strength for to-morrow.

IMPROVING THE POST CARD.

The Government Promises a Much Needed Improvement in Style and Quality of the New Post Cards—Some Reflections on the Present Popularity of Post Cards and Which Has Been Brought About Largely Through Their Use for Illustrative Purpose.

We are now to have a trifle of three billion and a half new postal cards for circulation in the next four years, and it is promised that they will be of lighter weight and also stronger, with a better surface for writing with pen and ink than the cards now in use. The post cards made by the Government are probably more largely used in business than for private correspondence. A prejudice against conducting social correspondence by means of one-cent cards, always open to the inspection of the rural Postmaster or mistress and their folks, or the hotel clerk and the hotel telephone girl in her few moments of occasional leisure, still exists, though not so strongly, we infer, as in the day of their origin. The postal card has grown into social use with the decay of old-fashioned manners. It represents the limit of informality, as well as of cheapness, in letter writing. It is safe to say, in these days, that nearly everybody uses the cards more or less in his private correspondence, though comparatively few spread forth intimate facts of family doings upon them for the enlightenment of strangers. There is still a suspicion of rudeness, however, in the purely social use of the postal card, though the intemperate use of the telephone to ask questions which might as well be asked politely and informally by mail, to "call up" somebody whom you have no right whatever to "call up," is much more reprehensible.

Probably the picture post cards, with which the whole world is now flooded, commercial, not Governmental articles, with a blank space marked to receive the postage stamp, have served to bring the regular postal card more into private use. If a friend sends you a card bearing a picture of the Lover's Leap or the Devil's Bridge contiguous to the summer resort at which he is stopping, asking, in the small space reserved upon it for writing, about your health, it is surely permissible, if not the very best form, to reply on a regular postal card that you are well and hope he is the same. As for the value of the Government's postal card in business, it is not to be disputed.

FARM IN MOVING PICTURES.

Uncle Sam to Give Exhibitions at State Fairs.

(Special to The Talking Machine World.)

Washington, Sept. 4, 1909.

Moving pictures for the farmers are the latest development in the exploitation of the work of the Agricultural Department. The success which has attended the extension of the nickelodeon business throughout the country has induced Uncle Sam to embark in this enterprise on his own account. A score or more of films have been sent to Minneapolis to be exhibited at the Minnesota State Fair next week. The pictures show ploughing, sowing, cultivating and harvesting of the cereal crops, the manufacture of butter and cheese, fruit culture and other branches of modern agricultural industry.

If successful, the Minneapolis exhibition will be repeated at other State fairs throughout the country under the auspices of the department. Assistant Secretary of Agriculture Willet M. Hayes will superintend the initial exhibition. He will have with him several assistants from the department, who will operate the machine and explain the pictures.

ANALYZING A PROPOSITION.

Best Method Is to Let the Other Man Do the Talking—Easier to Break Up an Argument Than to Make One.

No general rule in regard to the consideration of important business problems has been of greater service to me than that which may be tersely stated in the words, "Let the other man do the talking." The soundness of this maxim has been so conclusively demonstrated, so far as my own experience goes, that I do not hesitate invariably to adhere to it and to urge it as a cardinal rule that will serve on all occasions. The logic of this procedure is apparent when it is remembered that every man who is charged with the responsibility of presenting an important business proposition goes to his task prepared to answer questions and objections which the man with whom he desires to treat is most likely to offer. I doubt if there is an exception to this rule. "What questions will he ask me and what objections will he raise?" furnishes the groundwork for the preparation which every man makes for the presentation of a business proposal to the man he hopes to interest. When these questions are brought forward he is ready to answer them; by asking the questions naturally suggested by his statements you are playing directly into his hands and are doing precisely what he desires you to do—carrying out the line of campaign which he has devised. He is ready to meet you at every point with the answers and arguments carefully prearranged and best calculated to win success for his cause.

But what is the result if you place the burden of conversation on him, force him to do the talking and fail to come forward with the questions which he has prepared himself to answer? Simply this: He is thrown off from his predetermined line of attack. This naturally disconcerts him and he finds himself obliged to adopt a new line of campaign. So long as you are attentive to his arguments he must keep on presenting them until he has literally "talked himself out." In the course of this process he is bound, sooner or later, to drop a word here and there which will give you the clew to his motives and aims and which will place in your hands the possibility of getting to the bottom of the subject.

F. H. Parsons.

BUSINESS TROUBLES.

Post Card Importing Company Among Those Put Into Bankruptcy.

A petition in bankruptcy has been filed against the H. Hagemeister Co., importer of post cards at 41 and 43 Warren street. It was alleged that on August 31 the board of directors admitted in writing inability to pay debts and willingness to be adjudged bankrupt. The company was incorporated on April 17, 1907, with a capital stock of $25,000, Hans Hagemeister president and treasurer and Paul Fischer secretary. President Hagemeister went to Europe about a month ago to ask some of the creditors there for a three months' extension on acceptances due in October.

HORSMAN CO.'S BIG SELLERS.

The firm of E. I. Horsman Co., of 365 Broadway, New York, seem to be always in the field with a "big seller." Just at present they are working overtime in an effort to keep up with their orders on the "Billiken Doll," a fuzzy creature with arms and legs that is smiling his way into hundreds of homes weekly. The Billiken doll allows the retailer quite a handsome profit and will prove a ready seller.

"The greatest specialty ever carried by a retail store"—is the verdict of thousands of dealers—concerning the New Pocket Edition Gillette Safety Razor.

The demand is astonishing. Sales over the retail counter are breaking all records. Every old Gillette user wants the Pocket Edition and it makes new friends at sight.

The set consists of handle and blade box, either triple silver-plated or 14k. gold-plated.

The Pocket case is of gold, silver or gun metal, plain polished or richly engraved in Floral or Empire designs. It is so neat and compact that it will slip into the side of a travelling bag—***the blades are fine.*** Prices, $5.00 to $7.50.

Aside from the sales of the razor, the business in blades is a steady income for a store.

Two additions to the Gillette line this season are the Gillette Shaving Brush—a Brush of Gillette quality, bristles gripped in hard rubber; and the Gillette Shaving Stick—a soap worthy of the Gillette Safety Razor. The stick is enclosed in a sanitary nickel box; both soap and brush are packed in attractive cartons. They will be welcomed by Gillette users everywhere.

Special showcase supplied with initial order for a hundred dollars' worth of goods. Write us for full information. Get our suggestions on popular assortment. Talk to your jobber about it.

BEST TO BUY GOODS THAT SELL.

Some Pointers Worthy of Consideration by Dealers Stocking Up on Side Lines—Rules Which Should be Followed in Order to Secure Success—Some Advice from an Expert.

The first and last consideration in buying should be this: "Goods are bought to sell again." Obvious as this truism is, there are many men who should stick a pin in it, and keep it there, until the lesson it contains is thoroughly learned. Many a promising business has been ruined at the start by over buying in what may be called the rubbish market. Hence the conundrum: "When is price not the price?" Answer: "When the goods don't sell, and the price shows no profit."

The fact is, unless goods can be disposed of they are dear at any price. They lock up capital, they take up space, and they need attention, which is another word for time, which in its turn again represents money. Here are three losses—money, space and time—and nothing to show for them by way of compensation beyond the glitter of a false and deluding so-called cheapness.

The dealer should only purchase what he is confident he can dispose of at a fair and adequate profit, and that within a measurable space of time. Attention to this point will save lots of trouble, and many a heartache.

The first thing to be thought of before making any purchase, should be the demand for the particular line or article in question. If the demand be known, so much the better. If the demand be probable, figure on the probability but do not give any large order upon a chance, no matter how excellent.

A dealer has constantly to take a risk in his business. This is nothing more than enterprise, without which nothing substantial can be achieved, but the risk should be understood, and strictly limited. Nothing will more quickly cripple a house, and bring gray hairs to a merchant's head, than to load up heavily with unsalable stock.

A dealer can always handle to advantage goods for which there is a steady call, and even if he does occasionally go beyond the market in making his purchases, there is no particular cause for him to worry so far as this kind of goods is concerned, for the demand is there, though the dealer has for a time unduly anticipated it. Still even in regard to staple goods, it is always best to buy at frequent intervals, so far as it can be done economically.

Stock is bound, however well kept, to tarnish and lose something of its pristine freshness with the lapse of time. So long as all lines are properly represented, and there is enough on hand to make the right kind of showing and to meet the live demands of the business, there is really no valid reason for carrying excessive stock in any department. Nor is it really to the interest of the honest manufacturer that the dealer should do so, for as between two makes, it is easy to see that, other things being equal, the fresher will always have the preference with the average customer. The manufacturer who systematically seeks, either through the office or by the aid of too plausible salesmen, to unload in excess of his requirements upon the dealer, may make a splurge for a year or two, but he will not last much beyond that. The overloaded shelves that carry his depreciated and depreciating lines in innumerable stores will as surely weigh him down as they already do the unfortunate dealers who, in a fatal moment, overstocked with his goods, to their sorrow.

The old moral as to "the contented customer" nowhere applies more forcibly than as between wholesaler and retailer. These men are trading every day of their lives, and here permanent relations are above all things else the most desired.

Never let the dealer unduly enlarge his order, with the idea that he will thereby improve his position with the wholesaler. He is doing nothing of the kind. The business that the manufacturer most appreciates is that which comes to him from the shrewd dealer, who figures out everything and declines to be stampeded.

The leading specialties should be handled in a broad-gauged way. The fact that a dealer keeps a long list of specialties makes his store known, and in the best kind of way. The chief call for specialties comes from men who are themselves more or less experts. The trade and good will of such men are always worth having, for they constitute the best and most enduring kind of advertisement. A word from them goes a long way. The stamp of their approval is the signet of reputation. If people once get to saying, "Go to the Blank store; you are sure to find what you want there. They keep everything," the reputation of the house is made, and a splendid foundation is laid to build upon, in a larger way.

Be up-to-date, and prove it, by buying and handling, we will not say all the new things, for that would be an extremely risky thing to do, but, at least, such of them as are of an obviously practical and promising character. It is not necessary to attempt too much in this way, but still enough should be done to let people know that new goods are carried, if their merits warrant in so doing. This matter admits of being approached in various ways. Usually, the first call for a new article comes from some one who is informed above the average, for we are not referring to those novelties that have already appeared in the stores, and for which presumably there already exists a certain demand. This suggests the thought that it might be a good idea for the dealer to foster a habit of discussing new things, as they arise, with some of the more likely among his customers before placing the goods in actual stock. What more easy and natural, for example, than to take down the latest catalogue or leaflet and, passing it over the counter, say: "Well, Mr. Jones, what is your opinion about this? It is quite a new thing to me. Do you feel like buying it? If so, I would be pleased to get it for you." In this way the dealer would have an opportunity of showing himself progressive, while at the same time avoiding unnecessary risk or outlay.

Regular, seasonable goods should be received and unpacked before the demand begins to make itself felt. It is worth while remembering that even the seasons are not entirely regular in their comings and goings. As the sporting world—an easy, go-as-you-please world on the whole—has not universally recognized high priests and priestesses of the fashions to issue decrees as to when and when not sportsmen and athletes shall begin their favorite diversions, it will pay the dealer to take no chances in this matter of the seasons. Nothing is lost by being always a day ahead.

The dealer who is behind with his stock is always at a serious disadvantage. When the rush is on is no time for forwarding hurry orders; it should be for the dealer a season of harvesting, and not of preparing. Business lost in this way cannot, in the nature of things, be recovered. Unfortunately, in cases of this kind, the loss is very apt to be of what has been called the double-barreled order, for not only are the early sales that might, with a little provision, have been secured, lost, but there is a strong probability of much of the goods being carried over to the next year.

In buying, it is always difficult to decide as to the precise size of an order, but that is no reason why everything should be held up while the buyer is making up his mind. It is seldom necessary that the mind should make up as a whole. As a rule, the first important point in this connection is to place at least a part of the order promptly. An order can be expanded or duplicated later, but time once lost can never be recovered.

It is important to the retailer that he confine his orders to houses that render what is known as good service; who keep large and serviceable assortments, ship promptly, pack well and are generally accommodating.

No dealer should give a monopoly of a line to any one house, unless as a part of a specific agreement in which his interests are specially safeguarded, for that does away with that healthy competition that is the sole permanent guarantee of right qualities, styles and prices. Orders should be distributed, but not too widely, either. Make a point of gaining the confidence, friendship and respect of manufacturer and jobber. Do not ask too much; be accommodating to others, if you expect them to be so to you. But insist upon getting all that is coming to you; that's business.

Do not waver in policy. The spheres of thought and of action are distinct. Form your opinions slowly; that is the privilege of judgment; but let all your decisions be prompt, and execution swift to follow.

MAKER TO DEALER

NATIONAL COLORTYPE CO. Department 9 CINCINNATI, OHIO

WRONG CAN NEVER BE RIGHT.

When you're wrong, acknowledge it promptly. It never pays to convince a customer that wrong is right, so why waste time in argument over it? If you're right, be firm, but courteous. There is no cause for worry over the loss of a customer who will take advantage of your confidence.

DOESN'T PAY TO BE A PESSIMIST.

The Experience Encountered by a New Yorker Recently Which Shows the Point of View of Many "Kickers" Who Really do Not Understand Themselves—Disseminate Gloom Instead of Sunshine.

A New York man was standing by the desk of a hotel in a large New England town when a salesman entered and registered.

"Glad to see you, Bob," said the clerk. "How's business?"

"Rotten! The worst ever," was the response. "Nothing doing; nothing at all doing. Give me a room."

The clerk placed a number opposite the name.

"No, you don't," said the traveler. "None of your little cheap rooms for me. I want a good one, on the front, with a bath."

"I gave you this," said the clerk, as he hastily substituted another figure, "because I thought that if the country was down at the heel, you would need to economize. You gave me a blue chill down my back by your remarks, and I thought you would like saving some money on expenses."

"Save nothing!" snorted the traveler. "Things haven't got down that far yet. You bet I'm making money, and so is the house. But not rolling in wealth as we did last year. Business is big yet, but not as good as it was when everybody was piling all over everybody else to buy goods. Give me the key."

The New York man, who is an optimist by nature and a daily dispenser of sunshine, took occasion during the after-dinner smoke in the lobby to get into conversation with this commercial traveler. As an opening, he asked him: "What is your purpose in leaving behind you a black trail of ruin wherever you go?"

"What! Just repeat that, please."

"I meant to ask you," said the sunshine man, "what your purpose was in diffusing disaster wherever you go; in making people believe that there is nothing doing, and thereby persuading them to do nothing!

"A few minutes ago," the speaker continued, "I overheard you telling a friend of a call you made on a house that buys your line of goods. I heard you say that you had urged the buyer to give you an order as a lift, as you had not made a sale in two days."

"Well, suppose I did?" retorted the traveling man.

"Don't you see the folly of such a course?" asked the man from New York. "You go in and tell a buyer that no one else is buying, and what is his conclusion? Simply that there is no demand for goods, and that he is safer with his money in the bank than with the goods on his shelf. Did the man of whom you made your appeal give you an order?"

"He did not. Said that he did not need the goods."

"Of course not. In your statement as to a lack of orders you killed all possible chance you might have had of a sale. When you left, that merchant no doubt canceled an order or two, told his clerks to push all the goods on hand, instead of asking him to order new ones, and put the screws tighter on his collections. It is fellows like you who make hard times, and you have no excuse for it on your own confession."

WHEN WORK BECOMES A PLEASURE.

When the proper relations exist between buyer and seller, the transaction of business between them becomes one of the genuine pleasures of this work-a-day world. Business can and should be made a pleasure to all parties concerned.

The world may owe you a living, but you must collect it yourself. Providence provides food for the birds, but not in their nests.

Smile, hustle and let the other fellow do the grumbling, and if you do the smiling and hustling he will have occasion to grumble. Confidence and enthusiasm, backed by determination, form a combination that overcomes all obstacles and wins success and fortune for the salesman who possesses them.

When you see another man going by you in the race for success, don't think it is merely that he has luck and you have none. Luck never made a success of a business. Hard work, mental and physical, is what does it.

A PAYING SIDE LINE

Is the Hohner "Harmonette" and Other Specialties Made by the Hohner Institution—Big Sellers and Pay a Handsome Profit.

Talking machine dealers who wish to strengthen and diversify their side line and novelty stock will find the Hohner "Harmonette" one of the best sellers in the market. It is one of the latest harmonicas manufactured by this world-famous firm, who have the largest plant of its kind anywhere at Trossingen, Germany. The "Harmonette" has thirty-two reeds, to which is attached a harp-shaped box, handsomely polished. The sound-box also acts as a resonator and considerably softens the natural metallic effect of the tone of the instrument. It is made to retail at fifty cents and represents excellent value. M. Hohner, 475 Broadway, New York, in connection with the "Harmonette" announces a specially attractive selling proposition, a handsome cabinet containing an assortment of his goods that should appeal to every live dealer, and which appears on another page of this issue of The World. Ask your jobber for the special folder about one of the finest offers ever made in any line of business.

THE POST CARD SITUATION.

The Settlement of the Tariff Question Has Stimulated Business With American Manufacturers, Who Are Producing Artistic, Clean and Clever Prints.

The feeling of confidence among the post card manufacturers of this country, which has been noticeable since the increased tariff rate went into effect, has become more evident during the last few weeks. This feeling seems to be shared by the retailers, a great many of whom are now placing large orders and specifying immediate delivery. Such signs are assurances, should any be necessary, of the continued popularity of the post card.

The industry now represents an invested capital of several million dollars, and the tariff protection will undoubtedly do much toward its continued rapid development on even a larger scale.

The time has long past when any view printed on cheap cardboard and cut the shape of a post card will find a ready sale. The public demands artistic subjects, clever designs and fine color printing.

To do the post card manufacturers justice, when they first felt the changing attitude of the people they did everything in their power to encourage it. Competition also has done a lot to raise the post card standard to its present level. The sale of suggestive cards is dwindling monthly. One house the writer has in mind published nothing but this class of card and sold them before they came off the press. This was some years ago, when the post card was first becoming popular. Now the house does not issue a card that is not absolutely O. K. The change was not made for moral reasons either, and gives conclusive evidence that the public does not want a card that is off color in any way.

Local views still command a large sale, and clean comics, art studies, etc., will build up a well paying side line business.

REAL PHOTOGRAPH POST CARDS.

The Garraway Photo Art Co., located in the Longacre building, New York, are meeting with notable success on their new real photograph post cards. These cards are actual photographs made from any clear picture by a secret mechanical process at very moderate prices. Samples and all necessary information will be sent to interested parties.

How to Expand Your Business.

¶ That is a subject which interests every live merchant in every part of the country, and if you are selling talking machines why would it not be well to add player-pianos?

¶ They blend harmoniously and you can increase your income very materially if you secure the agency for

The Angelus Piano

¶ Bear in mind the **Angelus** is the original piano player and with it it is possible to accomplish the most artistic results in piano playing.

¶ Musical expression is absolutely under the control of the performer.

¶ The **Angelus** possesses many features of advantage which places it in advance of any player created.

¶ We can explain this to you if you write us, and we can also show you how it is possible to increase the annual profits of your business without materially increasing your expense account.

¶ In other words, with the **Angelus** agency, your overhead expenses are not increased but your receipts will be growing all the while, for the **Angelus** has the power of attracting trade that is marvelous.

¶ Now don't put this off but let us take up this subject with you at once. It will pay you.

Wilcox & White Co.

MERIDEN, CONN.

SOME GOOD ADVICE.

What Comptroller Metz of New York Had to Say to a Young Man Asking for Advice on the Subject—Can Only Learn from the School of Hard Experience.

A young man wrote to Comptroller Metz, of New York City, asking his advice as to how to become a traveling salesman, to which the Comptroller, who is an ex-commercial traveler, made the following characteristic reply:

"Dear Sir:—In reply to your favor, in which you ask me whether I have ever heard of the National Salesmen Training School, would say I never have. You also ask do I really think an inexperienced man would be qualified by a correspondence school to maintain a lucrative position as salesman?

"In reply to the latter question, I believe a man can be educated to become a salesman after years of hard work and study; not the study of books on salesmanship or by correspondence schools, but from the study of the goods which he is selling and from studying men's natures and hobbies.

"The making of a salesman begins with a young man entering a mercantile business. He must start at the bottom, for those who begin at the bottom and gradually work themselves up are the kind that count.

"I would advise you to get a position where there is a chance for advancement should your efforts warrant it. If you want to become a salesman, I advise you to get into some manufacturing firm making good stuff—for quality is remembered long after prices are forgotten—and learn their line thoroughly. It is the man who knows his goods who can present them to the trade in the true light that convinces and gets the business.

"Then get on the road. Even if you have to go along with an old traveler and pack his trunks for him so you can get a chance to buck up against the real thing—the retail trade. Experience teaches better than correspondence schools. If you learn the goods, the field and the customers, you will secure an asset which will make you valuable and independent, an asset which you can carry into the general market and easily find someone to pay you a good salary, for men who have money are always hunting for men who have knowledge and brains.

"I had to start with nothing but a-want-to-work. I followed the plan I am advising you to follow, and took my Post Graduate Course in the School of Hustle. Wishing you success, I am, very truly yours, "H. A. METZ."

HARD ROAD OF THE THINKER.

His Efforts to Stimulate Progress Often Disturbs the Man Who Wants to "Leave Good Enough Alone"—The Thinking Man in Business.

It is strange, but nevertheless it is quite true, that a great many people hate to think, and not only do they object to making use of their own thinking capacities, but they hate to see others using theirs.

Some people are disturbed by thinkers. Just when they have settled down comfortably into a rut, along comes the thinker and disturbs their rest. Thinking precedes intelligent effort, and effort is distasteful to many. These have got used to traveling along the line of the least resistance, and apparently have no desire to make a change. Nearly everyone who ever advanced a new idea or a new theory got hooted at and sometimes persecuted for his pains. We have the familiar example of Galileo, who was forced to retract, under threat of death, his assertion that the earth turned round. There is also a story to the effect that an early discoverer of the motive power of steam was thrown into a French prison as a dangerous lunatic, and so on through a list which might be added to indefinitely.

Progressiveness has never been a distinguishing characteristic of the human race. This quality has been largely confined to a few thinkers. In business life it is the man who does some thinking on his own account who most frequently succeeds. The business world wants thinking men, and reserves for them its highest rewards. This is why a higher salary is paid to the skilled engineer who plans big enterprises than to the mere laborer or mechanic who simply does what he is told. The time has gone by when the world's battles were won by brute force. It is the keen intelligence and thinking powers of the man behind the gun which does the work.

The great majority of our everyday ideas we get by inheritance. We come into a legacy of cut-and-dried ideas on politics, religion, social usage and a great many other things, which we accept just as they are handed down to us and no questions asked. It is an easy matter to find men everywhere whose minds are hermetically sealed to everything in the nature of progressiveness.

ANTICIPATING FUTURE NEEDS.

Dealer Who Orders Early Is the One Who Has the Stock When the Demand Arrives.

It's just as easy for you to anticipate your needs as it is to wait until you need the goods! Get your orders in early—at least for about what you think you will use, and then the matter is off your mind. No matter which you do, whether you order for immediate shipment, or order for future shipment, get your orders in! Then it's off your mind, and when the time comes you'll have the goods in stock, instead of empty shelves, and no one knowing when you can get delivery. The man who has the goods to sell sells the goods. The man with empty shelves and an empty store is pretty sure to soon have an empty stomach.

Get the new things ahead of the other fellow and make money on them. Frequent change of the arrangement of your show cases gives the effect of new goods received. The same old arrangement, month in and month out, no matter how many new goods, looks like the same old stock.

It does not follow that the store where the most work is done is doing the largest business. Lack of system means a whole lot of work, with very little accomplished.

Window displays are divided into three classes—good, bad and indifferent. The first one is the only one that will bring satisfactory returns.

Be as good as your word. Be the kind of salesman whom people will learn to trust. In no other way can you create a following which will make you valuable to your employer.

NOVELTIES IN POST CARDS

Since getting out our Series No. 24 Flower Cards with gold backgrounds we have been fairly swamped with orders for this line and we have decided to make another innovation by offering the same cards with **silver backgrounds.** There are 20 designs consisting of poppies, roses, nasturtiums, tulips, etc. We can supply these with either gold or silver background, with or without quotations, at the following prices: $2.00 per 1,000; 10,000 at $1.75 per 1,000; 25,000 at $1.50 per 1,000; 50,000 at $1.25 per 1,000.

OUR JUERGENS LINE OF FLORALS is now ready and is the finest line we have produced, consisting of morning glories, daisies, etc., in a variety of colors. This line is made with beautiful gold backgrounds, also with a very rich black enameled background, which makes the beautiful bright colors of the flowers stand out very strongly. We can supply these cards with or without quotations at the following prices: 1,000, $3.50; 5,000 at $3.25; 10,000 at $3.00 per 1,000.

OUR NEW SERIES OF THANKSGIVING CARDS in colors with beautiful gold borders are now ready. These 12 designs are originals by Percy Reeves, whose reputation as an artist needs no comment from us. The subjects consist of turkeys, pumpkins, children, etc., worked up in a variety of pleasing and attractive cards. Sales already aggregate nearly a million cards before a single card is off press. You cannot afford to be without some of these cards. Prices: $3.00 per 1,000; 10,000 lots, $2.75 per 1,000.

OUR SERIES NO. 80 OF THANKSGIVING CARDS, consisting of 12 subjects, is especially designed for the mail order trade and for anyone using large quantities of cards of medium or low price. There are 12 designs in this series, entirely different from the better goods, but equally catchy and salable. We shall have these cards with a gold background or without. Price of gold background as follows: $2.00 per 1,000; 10,000 at $1.75 per 1,000; 25,000 at $1.50 per 1,000; 50,000 at $1.25 per 1,000.

Price without gold background, as follows: $1.75 per 1,000; 10,000 at $1.50 per 1,000; 25,000 at $1.25 per 1,000; 50,000 at $1.00 per 1,000.

CHRISTMAS AND NEW YEAR'S CARDS—Our line is now complete. Write us for particulars and samples.

Do not forget our **PHOTOGRAVURE CARDS,** 30 numbers. They have had a great sale, and being entirely new subjects, are proving to be very popular, as we are constantly in receipt of duplicate orders. Prices: $6.00 per 1,000; 10,000 at $5.00 per 1,000.

We will send a set of samples of the Photogravure Cards to any dealer upon receipt of 15 cents to help pay postage and advertising. We do not care to charge for samples and will gladly send one or two samples free of each of the above lines to any dealer who means business.

To Business Men

Business men in every line admit the value of good trade papers.

A trade paper must be original—it must contain a variety of matter including news service—technical information—in fact it must crystallize the entire news of the special business world, and be a helpful adjunct to every department of trade.

Scan the columns of The Talking Machine World closely and after you have completed an analysis of the contents of this publication see if you can duplicate its value in any other trade!

The World is a help to the talking machine business.

It exerts an healthful optimism.

It wields an influence for the good and every man who sells talking machines, no matter in what part of the universe he may be located, should receive this publication as regularly as it is issued. He is missing a vital business point if he fails to do this.

Thousands of dealers not only in the United States but in every country on earth consult the pages of the World regularly.

They draw from the World pleasure and profit.

The talking machine business has a brilliant future, and this publication is doing much to enlarge the business horizon of every retail talking machine man in the world.

To receive this paper annually costs but $1.00. All foreign countries $1.25.

EDWARD LYMAN BILL

1 MADISON AVENUE, NEW YORK

TRADE MARK

Thomas A Edison

The name EDISON is the first word and the last in sound-reproducing instruments.

To the buying public it means that Edison produced the first of such instruments, and that every forward stride since has been due to his genius alone.

Combine with the name Edison, Amberol Records, and the "Fireside" at $22.00 and you have a selling force to start with more than double that of any other instrument.

MANAGING SALESMEN.

Proprietors of Retail Stores Should Watch Clerks More Carefully Than They Generally Do—Lack of Proper Training in Clerks Detrimental to Business.

Too little attention is paid by retail store managers to the power they may exercise over their help for the good of the business, to say nothing of the good of the help. A clerk who is hired and then practically let alone, unless it may be that he is watched to see what he will do or what results he may fetch for the business when left to his own devices and inclinations.

If a man buys a horse he takes note of the animal's characteristics and does his best to train that horse not only to carry itself as it should but to become a good horse. Clerks are hardly horses in the sense of laboring devices or mere servants, but it would be as sensible to allow the horse to go as he pleases without any training to the ways and desires of the owner as to allow the clerks to go as they please without any attention whatever from the management of a store.

Despite all we may say about the store and its line of goods, the business and its profits are always in the hands of the clerks who handle the goods and handle the customers. No matter how much the personality of the store management may appeal to the public, unless the clerks are inclined to handle customers as they should be handled the business of the store will be hurt in a shorter period than it takes to stock it up with goods.

That thing doesn't happen in the aggregate, but there are stores and stores where there are clerks who do the business harm simply through ignorance and lack of proper training in the real business of the stores. Nor is that condition the real fault of the clerks. The blame is easily and directly attributable to a large indifference and neglect on the part of the management.

The management of some of the leading big retail stores of the country have recognized the need of training for their clerks and are conducting schools and training classes that shall fit the young and the green help for selling that shall be after the ideas of the store and after the right manners of selling goods. That can not be done in the ordinary store, but in such a store the manager has a larger and better opportunity to touch closely each clerk and know how to shape that clerk's inclinations and adaptations in the handling of goods.

The most powerful factor in the handling of customers is the possession of a clear head, says the Sporting Goods Dealer. There is not one store in 500 to-day that pays attention to the clearness of the brainwork of its clerks from day to day. It is true that there can not be a strict censorship over the goings-on and the doings of the clerks, but there is possible and can be a way to impress with reasonable force upon the minds of the clerks that they are expected to take that care of themselves, on the whole, which shall keep them in good physical and mental trim for the work they are hired to do.

How such a thing shall be done, is a matter that is up to each individual manager, but it can be done. The clerk who is physically off should have such care and attention that he may get back to normal as soon as possible. In one sense, it may not be up to the management to look after the ills and aches of the store force, but when it is considered that every day, or hour, of physical distress detracts enormously from the ability of a clerk to handle customers to the profit of the store, there ought to be a realization of the necessity of keeping the clerks in trim, as nearly as possible.

As for the moral side of the matter, there are certainly limitations as to what a manager can say and do to his help. He is not a parent in the store, not a religious teacher and not a manager of a kindergarten, but he is more than all three of those mentors; he is in a position to impress his clerks with the necessity of being up to par for their work all the time and that they can not be such unless they behave themselves as rational human beings. There is no reason why a man who pursues liquor habitually, continually seeks immoral companions, or persists in excesses he knows dull his brain, should be kept in the employ of the store after every reasonable effort has been made to straighten him out. That point can certainly be impressed upon the store people.

It is not a matter of dipping into personalities, but it is a matter of business, and there are no right-minded clerks who could understand it otherwise if put up to them in the spirit of the needs and necessities of the calling which they are pursuing. It is the business end of the talk that will have more and swifter effect than the real moral end of it, for men are given to resenting interference with their moral actions, when that is plainly the motive for interference.

PATHE FRERES IN AUSTRALIA.

The Well-Known French Manufacturers of Talking Machines, Cinematographs and Records Start Factory in Antipodes—A Most Important Happening in That Country—Formal Celebration Attended by the Prime Minister.

Consul John F. Jewell reports that Pathé Freres, who conduct establishments in Paris, London and New York, have opened an Australian branch for the manufacture of cinematograph, Pathephone and disc records. The opening was formerly celebrated at a gathering in the presence of federal and city officials. The prime minister (Mr. Deakin), in proposing the toast of the management, said that they were celebrating the establishment of a new Australian industry in the sense that it would be carried out in Australia, though it had been invented and brought to its present high excellence elsewhere. He hoped the new color process might add the finishing touch to one of the most wonderful of modern arts. This company have received a large order from the Australian Government to make cinematograph films to advertise the resources of the Commonwealth throughout the world.

THE KENTUCKY PHONOGRAPH CO.

Application Made for Final Winding Up of the Company—About $3 000 to be Distributed Among the Stockholders.

(Special to The Talking Machine World.)

Louisville, Ky., Oct. 1, 1909.

Papers have been filed in the Chancery Court of Jefferson county which will result in winding up the affairs of the Kentucky Phonograph Co., which was organized in 1889 for the purpose of selling phonographs in the State of Kentucky.

The papers were filed by R. C. Kinkead, attorney for the Kentucky Phonograph Co. The papers are in the nature of a friendly suit brought by the company against the stockholders, of which there are about one hundred.

"It is necessary," said the attorney, "to wind up the affairs of the company in this way. There are certain assets to be distributed, and all of the stockholders will share in them."

When the company was organized it had a contract with Thomas A. Edison, the New York inventor, by which it was to have the exclusive right to sell phonographs in Kentucky. The company was not successful. It is asserted that Edison violated his contract and that every Tom, Dick and Harry in the country was given permission to come to Kentucky and sell talking machines.

In 1901 the company brought suit in the United States Court in New York against Edison for violation of contract. Last summer this litigation was compromised, and as a result of the compromise there is about $3,000 to be distributed among the stockholders.

The incorporators of the company were J. W. Gaulbert, C. R. Long, J. B. Speed, John H. Sutcliffe, W. R. Ray and W. B. Haldeman.

The company was organized with a capital stock of $400,000. Half of this amount was turned over to Edison for permission to deal in his product in this State.

RECORDS OF INDIAN SONGS.

C. W. Cadman Has Secured Some Excellent Phonograph Records of the Songs of the Omaha Indians.

(Special to The Talking Machine World.)

Pittsburg, Pa., Sept. 30, 1909.

Charles Wakefield Cadman, who has been making phonographic records of songs of the Omaha Indians along the Missouri River, in the northern part of Nebraska, has returned here. Mr. Cadman has secured valuable material, musical and otherwise, for his work the coming season. He was privileged, through his close friendship with the leading people in the tribe, to attend their most sacred ceremonies and dances, and to study them at close range. A number of songs and probably some of the flageolet pieces will be included in the American Indian music talk which Mr. Cadman and Paul K. Harper launched last season. A number of phonograph records were obtained with success, and the themes will be heard in various compositions to be written during the year.

WINDOW DRESSER CAN BE AN ARTIST

If He Will—An Occupation That Calls for High Talent in the Talking Machine Field as Elsewhere.

The window dresser, whether in the talking machine or any other industry, must have taste—not native taste only, but a cultivated taste. He should be able to discriminate between what is ugly and what is beautiful; his perception should be quick to respond to the higher forms of the beautiful. He can never hope to become an artist without the factors and qualities necessary to the making of an artist. If he is without taste, or has a taste of low development, his work will put forth a taste to correspond. If his appreciation for the beautiful is lacking, there will be nothing of the beautiful in his trim. He can do nothing more toward exciting the pleasures for the beautiful in others than he himself can put into his work.

AN EXAMPLE WORTH OBSERVING.

A World man while strolling down Broadway, the early part of the month in search of elusive news and more elusive advertising contracts, observed the following sign being carried through the financial district: 'Have Your Shoes Shined While Listening to the World's Greatest Singer." Upon investigation a large Victor machine was discovered, singing to a room full of customers. When will the downtown restaurants adopt the idea?

Because you are not a born hypnotist don't think that you can't learn to sell goods. It's not so hard for a talking machine man to be tactful, courteous and accommodating.

RECORDS BY MEXICAN POLICE BAND.

The Experts of the National Phonograph Co. Secure 68 Records by This Famous Organization—The Mexican Police Band Is One of the Most Famous and Popular Bands in South America.

Among the many records obtained by the experts of the National Phonograph Co., during their recent stay in Mexico, those by the Banda de Policia (Police Band), are of more than usual merit. Already sixty-eight records by this famous organization have been issued, and further monthly lists of both Amberol and two-minute records will follow. The general excellence of these records is admitted by experts. There is not one in their number that does not measure up to the high standard of the National Co. records, and they are naturally pleased to be able to offer so perfect a list.

The Banda de Policia is one of the most popular bands in Mexico, where every one is a connoisseur of band music, and its members are the flower of the instrumentalists of Mexico. Organized and patronized by General Felix Diaz, nephew of President Diaz, and Chief of Police, and under the direction of Captain Velino M. Preza, who is an eminent composer of band music, the band has reached its present perfection and is now recognized as one of the leading bands of the world. This band has toured the United States on several occasions, and has always met enthusiastic audiences wherever it has played. During its last visit to the United States, in the fall of 1908, a concert was given on the steps of the Sub-Treasury building in New York, by special permission of the government and as a compliment from President Diaz of Mexico.

Many of the selections played by this band are typical of Spanish and Mexican music, and the peculiar charm of the music of these southern countries cannot fail to appeal to a large public in this country. Those who heard, remember with pleasure the snatches of this class of music, but few have enjoyed such a treat as is now offered. All these selections were made under the personal direction of Captain Velino M. Preza, to whose magnetic personality and large musical knowledge, the phenomenal success of this band is mainly due. The captain was delighted with the records just obtained and has expressed his pleasure in a letter to the company, which is given below:

"Mexican National Phonograph Co, Mexico City,

VELINO M. PREZA.
Director of the Banda de Policia, Mexico.

"Dear Sirs:—I have heard the latest records which the Police Band, under my direction, has recorded in your laboratory, and it is a pleasure to me to state that I have found them to be excellent in every way, and that the playing length of the 'Amberol' records of four minutes, enabled me to have the satisfaction of recording the pieces of my band with all the artistic coloring which they require. I congratulate myself on being reckoned among the numerous admirers of Mr. Thomas Alva Edison, and with kind regards, I beg to remain, yours sincerely,

"(Signed) VELINO M. PREZA."

PHONOGRAPH FIRE ALARM.

A Minneapolis inventor has designed a phonograph fire alarm which is intended to notify inmates of a house of a fire in the night and to call the fire department, but its usefulness depends upon someone from outside discovering the fire, should that someone be passing at the time the fire starts. The device consists of a phonograph and gong in connection with the telephone and an outside switch. The switch is labeled "turn this if fire," and is placed near the door bell at the front entrance. If a passing pedestrian sees a fire in the house, he turns the switch, which causes the gong to ring and at the same time lifts the telephone receiver and starts the phonograph. On the record is the address of the house and a call of fire, which the phonograph shouts into the telephone a dozen times.

YOU · GET · IT · ALL · FROM · US

Quality, Service, Satisfaction and Success

Send your Victor and Edison orders to the "House of Quality." All orders for records, both Victor and Edison, are being filled with records of the most improved recording now leaving the factory. This is important to you.

Our dealers say that we pack goods with more care, ship more promptly and fill orders more completely than jobbers who sell talking machines as a side line Send your orders to the "House of Perfect Service." It costs no more.

The man who hasn't made an error is dead, and those who say they never make one will die soon. We admit making an error occasionally but we are just as quick to rectify it as we are to acknowledge your remittances. That is Satisfaction.

If you will send your orders for Victor and Edison to us you will not only be on a par with your successful competitor, but you will stick out from the bunch like a large wart on a small pickle.

Eastern Talking Machine Co.
177 TREMONT ST. BOSTON, MASS.

SOME SAGE SUGGESTIONS

Reflecting the Cream of Many Men's Experience in the Battle for Success.

The man who forgets to call loses the largest order. The Lucky Man gets it. Be mindful.

The man who neglects to wind the clock misses the right train. The Lucky Man gets it. Be careful.

The man who leaves the important letter in his pocket does not get the helpful answer. The Lucky Man gets it. Be thoughtful.

The man who comes to the office too late misses the big chance. The Lucky Man gets it. Be prompt.

The man who delays in answering the telephone does not catch the straight tip. The Lucky Man gets it. Don't procrastinate.

The man who is not there when the boss wants to fill the vacancy higher up misconnects with the job. The Lucky Man gets it.

Don't argue. Argument breeds bad blood and convinces no one. It rather strengthens both parties in their original positions.

The clerk who wants larger wages must be a money maker for his employer. Simply holding down the job will not increase the firm's profits.

Some expenses produce profits; some reduce them. If you are to consider a large reduction of expense, beware how you cut into the former class!

Originate your own plans and carry them out. You may be able to copy your neighbor's plans, but it is very doubtful if you can copy his success.

Can you teach others about the things which you yourself do not know? That is why the man at the head of the business should know how to do the things at its foot.

Worry has spoiled a good many otherwise first-class business men. If a man would succeed, he should learn to keep out of things which cause fruitless worriment.

Any method of telling people the advantages of your store is advertising. The method that tells the most people, most effectively, at the least price is the best advertising.

How much better you like the railroad whose officials are uniformly courteous and obliging without expecting constant tips! Just so the women feel regarding stores.—*Printers' Ink.*

RUSSIA NOW FALLING INTO LINE.

Russia is evidently not behind the times. Only last month we recorded the use of talking machines by the Canadian Pacific railroad to replace the human announcers at their various stations, and now we read the following in the St. Petersburg correspondence to the London Globe:

"It has been left to the managing board of the Moscow, Windau and Rybinsk Railway to turn the gramophone to practical use, for the board has announced its intention to set up a huge gramophone at the Moscow station of the line, so that the arrival and departure of every train can be announced clearly to the traveling public. At the same time the gramophone will sound the bell thrice, as is usual, before a train starts on its journey. As over 70 per cent. of the people of European Russia are unable to read or write, the ordinary time tables are not of the smallest use to them, and the gramophone referred to has a splendid future before it, if only it can be made to speak clearly and loudly enough."

Victrola

the perfect musical instrument

Every Victor dealer ought to display the great Victrola side by side with the other Victor models.

The Victrola is a standard musical instrument. It presents all the Victor repertoire of high-class music in an attractive setting. It is elegant and artistic in appearance. Its materials and construction are the finest.

It appeals to the best class of people. Many people who have not bought a regular Victor become ready customers for the Victrola.

The profit is liberal; and Victrola buyers are the biggest customers for Victor Red Seal records—a profitable business in itself.

Most Victor dealers have added the Victrola to their stock, and are making money with it. Why not you?

RECORDER'S SANCTUM VISITED.

Some Observations Made and Impressions Noted on a Visit to the Recording Department of a Talking Machine Plant—The Artists Feel Badly Because They Sing so Much Better in Private Than in Public—Interesting Word Pictures.

There is one place where joy goes unconfined from 10 o'clock in the morning till 4 in the afternoon. This is in the recording department of a talking machine factory. In that sacred and limited precinct the atmosphere fairly sizzles with music and fervent declamation, and vaudeville, legitimate drama and grand opera rolled into one cannot excel the performance in point of interest and variety. The only trouble is this Ultima Thule of the continuous is a very exclusive affair and the general public is deprived of an opportunity to shower applause upon the stars that glitter in the phonographic firmament. The stars themselves take this deprivation of popular appreciation very much to heart. The tenors are particularly rancorous.

"I sing better when my head is poked into the mouth of this horn that at any other time," said one of these clear-throated persons, "and it seems a thousand pities that there is nobody here to hear me except the other performers, whose own melody is soon swallowed up in other horns."

"But you ought not to complain about that," consoled the privileged visitor. "Your sphere is not circumscribed. You are putting yourself on record, and no matter what you say or do you are bound to come out—"

"At the little end of the horn," put in the tenor, dryly.

"Ten o'clock," said the manager, appearing beside the visitor's chair. "Signor Capavelli, are you ready?"

The manager of a laboratory variety show has a benevolent cast of countenance. His voice is affability reduced to sound and his manner graciousness vivified in action, yet notwithstanding his very obvious amiability his mere announcement of the hour was sufficient to cause the disgruntled tenor with the Italian name and Londonderry accent to cease to lament the fate that had constrained him to run to horns, and prepare himself for song. This process of making up was not wearisome or intricate. It consisted merely of peeling off a coat. Then the Signor was ready to begin.

"First thing," said the stage manager, "we will have the Duke's song done again. It didn't come out well yesterday."

"That wasn't my fault," argued the tenor. "You'll have to charge that up to the pianist. I wanted to sing it in five sharps, but he had to play it in four flats. He couldn't transpose."

The piano was elevated about seven feet above the floor, but through this distance the man fingering the keys caught the adverse criticism and glared.

"You could not reach the A," he retorted. "I played it in a lower key on your account."

The stage manager rubbed his hands up and down the legs of his striped trousers.

"Gentlemen, gentlemen," he remonstrated, "It is now five minutes past 10 o'clock."

"Tum-tum-tum," wailed the piano and the tenor approached the capacious mouthpiece of the sensitized horn, bent his head nearer to the receiver and sang, con impeto:

"La donna è mobile,
Qual piuma al vento."

The baritone over in the corner put his fingers in his ears. "Heavens!" he breathed, "he'll break the thing all to smash at that rate."

"Sempre un' amabile,
Leggiadr viso"

vociferated the tenor.

"He doesn't give it the right expression at all," sighed the soprano. "It ought to go like this: La, la, la——"

The manager raised an admonishing finger and contributed to the general chorus a warning, "Sh—sh—sh." The baritone subsided and the soprano giggled. Two minutes later the tenor stepped out into the middle of the room and resumed his gum.

"Very good," pronounced the manager.

"Excellent," complimented the soprano.

"You outdid yourself," said the baritone.

"And now, sir," said the manager, addressing the baritone, "it is up to you. You are down for two numbers this morning—the factotum's song from the 'Barber' and the 'Pagliacci' Prologue. Which will you do first?"

"The Prologue," replied the baritone.

"Si puo? Si puo? Signori, Signori.
Scusatemi se da sol mi presento,"

bawled the baritone. The stage manager polished his trousers again.

"That will break all records," he said, delightedly, when the baritone had rejoined the group. "Do you adhere strictly to the classical here?" the visitor asked.

"Sure thing," laughed the all-round character man. "Nothing else goes within these dear, familiar walls. Just listen to me, for instance. I'm going to do 'Don't Get Married Any More, Ma.' What is more classic than that?"

A brass band climbed to its tier of benches and sounded the preliminary toots of a Sousa march, and the visitor escaped into an adjoining room.

"I wish," said the visitor to the tenor, "that you'd tell me something about this business of yours. Is it hard work?"

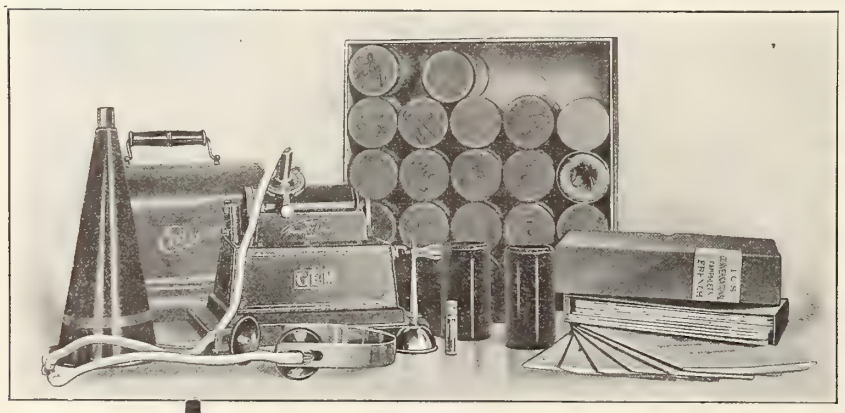
"Well, that just depends," he returned, "it is and it isn't. After you've once got the hang it's easy, but still it's mighty uphill work. The voice is fitted for phonographic work. The great majority of voices, no matter how well trained and effective in an auditorium, sound muddled and screechy and indistinct when immortalized in a machine.

"As I remarked a little while ago, I am now at my best when singing with a horn for an audience, but I can remember the time when I was at my worst under such circumstances. For one thing, the novice in phonographic work is sure to be affected with the worst case of stage fright known to the fraternity. There is no kind of spasm on earth like it. It is different from the nervous attacks that come over one when facing an audience. Somehow, the thought that you are about to say something that will be ground out for the edification of posterity fills you to the brim with self-consciousness, and the upshot of the matter is the tyro is sure to be floored on the spot. It takes weeks of practice to overcome this timidity and the tuning up must all be done on this limited stage right back of the piano. With that drumming away at your back and that horn sending — — — your own voice from the front, and at the same time choking the breath out of you, you realize that you are up against a hard proposition.

"Next to sopranos the tenors have the hardest time of all performers. Naturally, the high-pitched voices are more difficult to record, with all their shades and inflections, than those of middle register. Indeed only very few women's voices make perfect records. Perhaps three copies may be considered first class.

"A baritone voice is best for all-around purposes. It is valuable not only for singing, but monologues, political addresses and character studies. However, when it comes to versatility, I refuse to take a back seat for anybody, even though I am a tenor. Since I became a machine I've sung everything in a tenor's repertoire from the Swan song to 'My Babe From Boston Town,' and in about seven different languages, though of course I don't claim that I got a perfect accent. Then, I don't confine myself to the repertoire of a tenor. Up to a year ago I was forced, by the agencies of the phonographic labor market, to infringe on the rights of the soprano. Why, once I had the temerity to try the 'Mad Song.' It actually went on record, too, and is included in the regular list to this day. Besides that, I've done freak work. For instance, one manager conceived the idea, a year or so ago, of putting on record the cries of a solitary man who had drifted out to sea in a little shell of a boat and was about to pay his last respects to Davy Jones. Say, it would make your blood curdle to hear the shrieks and despairing 'Helps, and 'Ahoys' that that imaginary

The New I. C. S. $35 Language Outfit



One firm has ordered 300 outfits. Another firm sold outfits 24 hours after their receipt. They are ordering them all along the line wherever the outfits are shown. Why? Because they are sellers; they are profit makers; and they cater to a field that will quickly appreciate and purchase them. This outfit provides the very best method for teaching foreign languages in the world; a method that is indorsed by professors of the leading colleges and by the French, German, and Spanish Embassies at Washington. It teaches French, German, Spanish, and Italian to English-speaking people and teaches English to foreigners. The I. C. S. Outfit consists of an Edison Gem Phonograph made especially for language work, small horn, head-band hearing tube, oil can, and 25 conversational records teaching pronunciation that is guaranteed to be absolutely correct with native intonation and inflection. Accompanying these conversational records, there are pamphlet instruction papers teaching the theory of the language. Not only is this the most complete and by far the best language outfit on the market, but it is the cheapest as it sells for only $35. If you are alive to your best business interests, you will write today for further particulars—for the sake of increased business write us today.

International Correspondence Schools
BOX 918, SCRANTON, PA.

mariner let out. If I do say it myself, I brought the record up to the very top notch of realism.

"Well, a short while after that selection had been put on the market a New Yorker who was summering on the Maine coast loaded a little boat with fishing tackle, a miniature restaurant, a circulating library, a talking machine, and himself and went out for a day of dreamy dawdling on the ocean. He dreamed and he dawdled and by and by the water began to churn, and the boat began to caper most reprehensibly. Incidentally the man from New York began to try to holler but, to his dismay, he couldn't raise a peep. He hadn't been used to loafing adound on the water and his outing had made him so hoarse that he couldn't even squeal.

"There he was, away out there on the ocean, four miles or more from shore with not even a row boat in sight and no voice left to call anybody. Luckily he happened to think of the talking machine and in short order that machine was yelling 'Help!' and 'Save us!' to beat the band. The cries of the man, himself, in ordinary voice, couldn't have been half so effective. The racket was wafted clear in to the shore and I don't know how far inland. The crew of the life saving station heard it and rowed out and saved him."

The visitor looked at the tenor admiringly. "That was splendid," she said. "But you ought to have had a reward. You were primarily responsible for the rescue."

"Oh, I know," said the tenor modestly, "but I didn't put in any claim. I don't mind a little thing like that. I've done bigger things than that. It's been put down to my credit that I've worked no end of miraculous cures in hospitals and private sick rooms. A man over in Jersey City was converted last winter by listening to my singing of 'Rock of Ages,' and another fellow up in Yonkers——"

Then the visitor quietly backed toward the door and indulged in "thinking things."

MECHANICAL ZITHER.

Disc-Like Talking Machine Record Plays Tunes on Wires.

A novel musical instrument from the home of music is the mechanical zither invented by a German. This instrument consists of a zither with an attachment at one end for a disc like a talking machine record. The record has little projections on the underside by means of which a device connected with the strings picks out tunes as if the zither was played by hand. The disc is revolved by means of a handle at one end of the zither box, a strange feature in these days of self-playing instruments. Operating mechanically, as it does, the music of this zither is more nearly correct than if the wires were plucked by hand. There is no possibility of striking the wrong string, for only those wires whose spurs are struck by the projections on the record will respond and the tone thus given out is clear and entirely free from the blur so often caused by the striking of two wires at once when the instrument is played by hand.

STIMULATING THE RESPONSIBLE MAN.

Whatever puts more vim into an employe is a business asset. If a man can be made to take a more intelligent interest in his work and put the force of his own purpose behind it, that is a condition worth working for. To add 25 per cent. to the gross sales of a business may not mean as much in net profit as to add 25 per cent. to the efficiency of the working force—to get them to give 25 per cent. more vital work for the same expense. This principle is well understood in the manufacturing business and in other lines where there is a tangible relation between the expense and the output. But it is often overlooked in dealing with men of responsibility. Such men, being human, are affected by moods and degrees of interest in their work even more than the employe, who does more mechanical or routine work. Not to recognize this and conserve it, not to stimulate it and mold it along lines of improvement, is one of the greatest wastes of paid for energy and intelligence that can be found anywhere in the business world. The only worse thing is to attempt to govern such men too closely and so deprive them of the spontaneity and initiative of individual action. Few things add so much interest to the work of a responsible man as the intelligent and cordial appreciation of his work by his equals and superiors and the feeling that there are standards which he must still strive to attain.

WISCONSIN CO. BUY ANDRE STOCK.

Entire Line of Machines and Records as Well as Right to Handle Them in La Crosse Secured by the Wisconsin Music Co.

(Special to The Talking Machine World.)

La Crosse, Wis., Oct. 2, 1909.

The entire stock of phonographs and talking machines, records both of the Edison and Victor machines, as well as the right to handle them in this vicinity, has been purchased by the Wisconsin Music Co. from the Andre Music Co., on South Fourth street. A special department will be made of the talking machine business at the Wisconsin Music Co.'s store, on South Fifth street, and the concern will hereafter carry the largest line of talking machines, popular and classical records and supplies in town. A balcony at the rear of the store has been devoted exclusively to the new department.

HERE'S AN UNRECOGNIZED GENIUS!

Some one who signs the name of Henry Tasker has been mailing postal cards from Harrisburg, Pa., to Chief of Police Geoorge P. Washer, of Orange, in which he claims to have "the power of electricity administered through the body" and also a talking machine, which "administers the power of electricity through the air." The writer wanted the chief to communicate his inventions to "Mr. Edison, who invented electricity." The chief has been too busy to accommodate his correspondent.

INVENTS TALKING BILLBOARD.

Mort H. Singer, the Chicago producer of musical comedies, has turned inventor. He has designed and had patented a "talking billboard." The new device consists of the use of a phonograph and figures, so arranged with jaws moved by mechanical contrivances, that it seems to speak words uttered by the phonograph. Mr. Singer says he has had the idea for several years, but did not have time to perfect it until recently.

FIELDS' AUXETOPHONE ACTIVITY.

This Instrument Heard in Hotel Concert Also in Vaudeville Program with Great Success.

(Special to The Talking Machine World.)

Little Rock, Ark., Oct. 1, 1909.

S. M. Field & Bros., of this city, entertained an audience of one thousand guests and visitors at the Hotel Marion with an Auxetophone concert recently. The vocal numbers rendered by the great opera stars were artistically accompanied by the hotel orchestra. Each selection was enthusiastically applauded. The same firm took a part in the Majestic Vaudeville program recently with Auxetophone accompanied by the theater orchestra.

PAYS TO KEEP YOUR CREDIT.

It is the misery of debt that carves the wrinkles on the brow of frankness and transforms the goodly face into a mask of brass. It metamorphoses the man of past honor into a trickster.

When debt comes in at the door contentment flies out of the window. If you want to keep contentment in the corner you must shut the door of debt. With the former present a cup of cold water will taste sweet and refreshing, a crust of dry bread will be a toothsome dainty, a threadbare coat will afford warmth, and a battered hat feel easy on the head. Never mind poverty. Keep your credit and it will encircle you with the white glow of a noble manhood.

The Marietta Phonograph Co., Marietta, O., whose entire stock of goods at 113 Front street was destroyed by fire on July 31, are again back in business at 153 Front street, that city, with a complete line of Victor, Edison, Zonophone and Columbia disc machines and records—the line they formerly carried.

The vain clerk worries for fear the boss may not be able to fill his place while he's away on vacation. The modest clerk worries for fear the boss may fill it permanently.

Long Distance Telephones—Numbers 4677 and 4678 Gramercy. Cable Address: "Elbill," New York.

NEW YORK, OCTOBER 15, 1909.

FATHER KNICKERBOCKER has been holding a celebration which has never been approached in all of the old gentleman's annals.

The Hudson-Fulton celebration, the commemoration of two events which have had a profound influence upon the development of this country, closed early in the present month.

Many interesting features in the way of parades and pageants on land and sea have marked this holiday period—perhaps the most imposing which has ever occurred in the history of any city in the world.

It's a far cry from the three hundred years when Hudson discovered the great river which bears his name to the present time, but his discovery marked the opening to civilization of a region of which the Empire State forms a prominent part.

And then the second event, the first application of steam to navigation—an event which changed the whole maritime history of the world.

The hundred years of progress between Fulton's creation and the latest type of ocean ships is in truth marvelous, and the presence of the reproduction of Hudson's and Fulton's vessels added a charm to the great occasion.

THE celebration of the achievement of Hudson and Fulton was rendered all the more interesting and timely by the success of Cook in the field of Arctic exploration and the success of Wright in aerial navigation.

May we not expect that a hundred years hence a greater metropolis and a greater United States will be celebrating, with accessories which our present-day imagination can barely conceive, the discovery which has brought within human ken the Ultima Thule of the northern hemisphere?

Indeed, it has been a century of marvelous progress, and what strides we have made within the past few years!

The talking machine of to-day is conceded to be one of the wonders of the age.

In fact, perhaps, there is no invention which has interested men of all countries in the same degree that has the invention by which sound is reproduced with such fidelity and accuracy.

Other wonders, perhaps, just as great may mark the end of the next century, and who can say where the end will be?

BUSINESS in all sections of the country is showing constant improvement, and there is no doubt as to the future of the trade during the remaining months of the year.

The question which will be of the utmost importance to a good many merchants will be how to secure manufactured stock without annoying delays.

Merchants in all lines who have stocked up in advance have acted wisely, because it is conceded that with the rush which is bound to come from this time on it will be difficult to meet with all the requirements of the retail trade.

There are opportunities for business which interest every wide-awake merchant, and how to get the business and hold it is a question of live interest.

All of the retail dealers in the big cities try to impress the public with little touches of character given to their advertising, their show windows, their delivery wagons, their wrapping paper or their interior equipment.

Now, it is a good plan to watch the men who have been successful in other lines.

Study their methods and engraft such part of their business as seems practical and desirable into your own. Lessons may apply to the lesser establishments.

No matter how small the store, there are always points which may be gained from observation of the larger ones.

THE conductor of the smallest talking machine store in the land can gain something by a study of those higher up.

The small store can tell in the show window something about the specialties which are within. Talking machines, of course, in this particular trade.

Then, if there are good, snappy cards, inviting people to enter, that is good.

Then, when they do enter, if they are met with an interior that is inviting and are served properly, it at once becomes a buying atmosphere, and everyone knows perfectly well on entering a store where carelessness is in evidence that the environment is not congenial to selling. People feel instinctively that something must be wrong.

They prefer to make purchases where there is a good, bright, healthy environment.

To create a growing business the public must be interested, and if you have a growing business you have to grow with it, mentally and financially.

IF you wish your business to grow you must do something more than wishing to bring it about.

Doing things that are worth while always make a man grow mentally or physically, or both, and the business of such a man is so much a part of himself that it grows with him, and each helps to continue the process for both.

Now, never has merchandising looked brighter than at the present time.

All of the signs point to an unprecedented fall and holiday season, with continued prosperity beyond.

Now, are you ready?

Is your business house in order?

Have you made preparations for a big season's business?

If you haven't you have been asleep at the switch.

It is not too late to become fully awakened to the desirability of improving your business conditions to the utmost.

Recollect the holiday season is not far away. Are you ready for it?

The demand for high-priced talking machine outfits continues excellent, and there is every reason to believe that the sales of the de luxe creations will steadily increase.

The manufacturers are preparing to meet this demand, and there is no question as to its constant growth.

Indications now point to a season of activity in all branches of the talking machine trade.

It is up to business men everywhere to make the most of favorable conditions.

DURING the Hudson-Fulton celebration a number of trade visitors had the pleasure of inspecting the new Edison Amberola at the headquarters of the National Phonograph Co., in this city.

A detailed description, together with illustrations of this artistic Edison creation, appears elsewhere in this publication.

The new product has evoked favorable criticism on the part of those who have listened to its marvelous musical attributes.

The design of the Amberola is artistic, and it has a number of distinctive features which opens up a new field for Edison dealers and jobbers.

It will retail for $200, and it has special advantages for home playing.

The Amberola, which is a concealed horn machine in a handsome cabinet, is an attractive creation, and will unquestionably add to the fame of the Edison products. In its equipment are a number of new and novel features which will at once commend it to practical men.

It is the purpose of the company to have the Amberola type ready to supply the holiday trade. A number of important jobbers have already placed large orders for early shipment.

SALESMANSHIP counts in selling talking machines at retail as well as in any other line, and tact should be used in handling various types of callers.

In trying out records great care should be shown not to place on records which might offend and every care should be used to interest and enthuse callers. Too much emphasis cannot be placed upon the necessity of using diplomacy in handling customers.

We have seen in some warerooms salesmen place on some of the most frivolous compositions when trying to interest clerical looking gentlemen.

We have seen these men walk out of the store without purchasing and wearing upon their features an apparent look of disgust.

If managers will impress upon salesmen the commercial value of good record showing they will at once make a move in the direction of increased business.

It is well to have frequent talks—serious talks regarding the value of good salesmanship.

In this way many useful suggestions will be brought out which will assist salesmen and thereby increase the earning capacity of the establishments with which they are identified.

VICTOR TAKES PLACE OF ARTIST.

Remarkable Tribute Paid the Artistic Value of the Talking Machine by Mlle. Gerville-Reache, the Celebrated Contralto, of the Manhattan Opera Co., Who Consider Her Records Good Enough for the Worcester Festival Orchestra to Rehearse With.

The talking machine is steadily broadening its sphere of usefulness in all domains of effort. All the leading vocal teachers are now using the voices of the great operatic artists who can be heard through the medium of the talking machine to teach style, phrasing, voice production and other pedagogic essentials. Its usefulness and value have become so recognized in this special field that the scoffers of a few years ago have now "remained to pray" and praise the talking machine.

Perhaps the most enthusiastic admirers of the talking machine are the great operatic artists—men and women who are splendidly equipped to pass judgment upon the quality and merits of the voices reproduced by means of the talking machine record. And this reminds us that the talking machine came in for a new use in connection with the Worcester Festival, which took place the closing days of last month, and one which emphasizes its value along new and original lines.

Mlle. Gerville-Réache, the distinguished mezzo-soprano of the Manhattan opera forces, had just finished a rehearsal with the orchestra which went far from well. She was entirely disconsolate at the result, and in a burst of that French temperament which gleams in the sunlight at one moment and mourns in the shadow at another, and with that expressive shrug which may mean anything from "what shall I do" to "I don't care what happens," she said, "Mon Dieu, not only do I get nothing from that rehearsal, but they have taken away even my remembrance of words, phrasing and everything else."

After her attack of despondency had subsided it occurred to the prima donna that she would be compelled to get the music and go over the work in order to sing it as planned at the performance in the evening. Following this idea she went to the local music house of M. Steinert & Sons Co., but to her discomfiture that particular number was not on the shelf.

"What to do!" she cried. "What can I do?"

As a matter of offering the distinguished visitor a little entertainment, the urbane clerk suggested that he would be pleased to have her hear herself on the Victor talking machine, to which this establishment had devoted no little attention. This did not interest her, apparently. In fact, nothing could interest her with memories of the rehearsal in mind.

A friend with her was seized with a brilliant thought, and, turning to the clerk, asked: "Have you a record of this number that Mlle. Gerville-Réache is scheduled to sing at the festival this evening?" The affirmative answer was translated to the disconsolate singer, who was looking into vacancy trying to recall the delicate details of Gounod's "Stances de Sappho."

The suggestion made that she might hear herself as others had heard her struck her just right and a ray of light opened when her rich, beautiful voice rolled out of the machine. Never was an operatic star heard with more fervent delight and attention than she listened to this record of her voice. As the last note died away she said: "Encore! Encore! I want to listen once more." Three times she gave it her undivided attention, beating time with it here, breathing with it there and singing bits now and then. In short, she took a lesson from herself, in all probability, with more attention than she had ever accorded to any of the teachers of her life.

When she had finished in an outburst of delight, she said: "Oh, please, would it not be possible to send this record over to the hall and let the orchestra rehearse until it has achieved what I want? It would not put me to the strain and would thus have my exact interpretation."

Whether this suggestion was followed or not we know not, but it is certain that when the moment came that evening Mme. Gerville-Reache outdid herself and sang with all the enthusiasm and charm for which she is noted as leading contralto of the Manhattan Opera Co. and the star of whatever musical event she graces.

This is perhaps the greatest compliment ever paid the Victor record, and furnishes an idea of how the art of recording has been so developed that an artist as great as Mme. Gerville-Réache considers the record of her voice so satisfactory that she desires it sent to the leader of the orchestra as a model of the best she can do in interpreting a song.

And what possibilities this unfolds! The time

MLLE. GERVILLE-RÉACHE.

is not far distant, apparently, when great artists will have records of their voices attend rehearsals instead of appearing in person, thus saving the wear of their voices and keeping them fresh and in first-class condition for the operatic performance. Truly, the talking machine is opening up new fields of usefulness.

NO APPEAL TAKEN IN "DUBBING" SUIT.

No appeal has as yet been taken in what is known as the "dubbing case"—Columbia Phonograph Co., General, Fonotipia Co., and the Victor Talking Machine Co., against W. V. P. Bradley and the Continental Record Co. An order for the United States Marshal to seize the discs, machines, records, etc., in the possession of the defense, was issued by Judge Chatfield, Circuit Court of the United States, eastern district of New York, but the returns have not as yet been made to the complainants, as it will later.

A prominent attorney connected with the case, in speaking of the appeal the other day, said: "Of course, outside of the expense to the prosecution, I should like to see an appeal taken from Judge Chatfield's decision. There is not the slightest doubt but that the United States Circuit Court of Appeals would sustain the lower court in every instance. An appeal would settle the matter for all time, though it is evident this has already been accomplished as the suit now stands. It is, however, only in a professional sense I speak."

THE ART OF PLEASING CUSTOMERS.

A Difficult Thing to Please Everybody, but a Little Diplomacy Proves a Valuable Asset.

Mr. Merchant, one of the most important things about your business, and upon which so much depends for real success is that most gentle art of pleasing others.

To do this, you and your clerks and your office help may often be compelled to do things that are not as pleasant as they might be, and to put aside many personal likes and dislikes, either for the money there is in it or the good you are doing for your future business.

A pleased customer is a mighty big advertisement in itself, everyone will admit, for it often happens that the customer that seems hardest to please will eventually be your store's best friend and its best "plugger."

If we go into our large stores in the city and have a kick to make, the clerk refers us to Mr. So-and-So, and after we have given vent to all our feelings about the matter, Mr. So-and-So does not in return say, "You're a bug-house," "You're hard to please," "You'd kick if you'd go to heaven." Oh! no; he'll almost get down on his knees; he is sorry; the clerk is sorry—everybody is—and everything will be made right; he will give his personal attention to the matter to see that it is right. And the kicker goes away almost ashamed that he ever said a word, especially that he got "hot," and when he goes home the whole household will know what a fine, painstaking establishment is Smith's.

Some men never recognize an opportunity unless it is labeled.

Some men's idea of a corking good time is an uncorking one.

To the Victor Dealers in Western Michigan

WE are Victor Distributors, always carry a full line of Victor Goods, and can fill your orders for machines, records and supplies promptly. Grand Rapids is the metropolis of Western Michigan. Numerous railroad trains and electric cars are leaving this city daily in all directions and will bring your goods to your door within a few hours and at a small expense. Ordering from us means a saving of time and money. Try us.

Our representative will be pleased to call upon you.

KESIDE AVENUE, ORANGE, NEW JERSEY

IN THE INDIANAPOLIS TRADE.

Business Shows Marked Improvement—Enthusiastic Over Grafonola—Report Unusually Good Edison Business for Month—Saved Machines from Swindlers—Five-Cent Shows Fight to Open Sundays—Newspapers and Churches Opposed to Move—Other Trade News of Interest.

(Special to The Talking Machine World.)

Indianapolis, Ind., Oct. 1, 1909.

The talking machine business has been getting better in Indianapolis for the last month. Dealers think it is due largely to more confidence on the part of those who have money. Dealers out in the state seem to be willing to place larger orders with the Indianapolis jobbing houses. If trade keeps up during the winter as it is now the next season will be one of good profits for the talking machine enterprise.

The entire staff of the Columbia Phonograph Co.'s store from Manager Devine down is enthusiastic over the new Grafonola. "There will undoubtedly be a big demand for these machines," said Mr. Devine, "when the public know that we have them."

The Indiana Phonograph Co., who handle Edisons, reported an unusually good business in October. The monthly shipment to dealers out in the state was very gratifying. "It is not every day that we have single orders to out-state dealers reaching 300 records each," said one of the representatives of the company. "In October, though, we had a number of orders as large as that." The chief business of the Indiana Phonograph Co. is in the northern part of the state. Recently, however, six new agencies have been established in the southern part of the state, and it is said that that section of Indiana will be rapidly developed. The Amberol record keeps up its usual record as a seller with the Indiana Phonograph Co. The best selling standard record last month with the Indiana Co., was No. 10,234, "Down at the Huskin' Bee." The best selling Amberol was No. 219, "Turkey in the Straw."

E. E. Hill, 708 Massachusetts avenue, who handles Edisons, reports an increasing business with the coming of cold weather. He does a retail business only. The extension of business and building of new business houses in Massachusetts avenue has helped his trade.

The Kipp-Link Co., who handle Edisons, had a nice increase in business last month, according to Mr. Kipp, of the company. Mr. Kipp made a business trip among his agents in the northern part of the state and visited at Chicago and Detroit. He found all dealers hopeful of a good business. This company have established several new agencies in the state in the last month. The Amberol records are selling well with this company.

Among the stuff which was ready to be shipped out to Oklahoma recently and which resulted in the arrest of the three men and two women was a Victor Victrola, of the Musical Echo Co., and a graphophone belonging to the Columbia Co. A representative of the Columbia Co. went to the car to get the machine of that company. He happened to see the Victor Victrola in the car and immediately notified the Victor people.

Dr. T. Victor Keene, formerly city sanitarian, and at one time head of the bacteriological laboratory of Indiana, is one of the enthusiastic talking machine men of Indianapolis. There is scarcely a grand opera record of good quality that he does not add to his collection. He is a great admirer of Zenatello, the famous tenor. Recently Dr. Keene has been sick at his home and talking machine music has added to his entertainment.

H. H. Myers, representative at Chicago and in northern Indiana for the Columbia Co., was a caller at the local store. He was in Indianapolis over Sunday and declared that business was looking better all along the line.

A great squabble has arisen in Indianapolis during the last week on the question of whether the five-cent vaudeville houses shall remain open on Sundays. All of the places were open last Sunday and when an investigation was made it was found that Mayor Bookwalter had made an arrangement by which 20 per cent. of the net profits of the vaudeville houses were to go to charitable institutions. If some of the proceeds had not gone to charity it would have been a direct violation of the law for the vaudeville houses to be open on Sunday.

Immediately after the mayor's arrangement had been made public a great cry was raised by both of the leading newspapers of the city. The mayor's plan was called virtually a subterfuge and it was pointed out that the amount which would be derived for charity after all of the expenses of the vaudeville houses had been paid would be small indeed. Finally two of the leading ministers of the city took the matter up and it looks now as though there would be united opposition to the plan for having the vaudeville places open on Sunday.

Allen E. Jay, of the Kipp-Link Co., has returned from Texas.

Leonard Christ, of the Columbia Phonograph Co.'s staff, gave a graphophone recital recently at a lodge meeting of the Knights of Columbus.

Business is good among the five-cent vaudeville houses in spite of the opening of the theatrical season. The cessation of the summer excursion business has cut down the receipts of the penny arcades to some extent.

W. H. Frame has opened a moving picture show in South Meridian street. He is using a Twentieth Century Columbia Graphophone for outside work.

One of the Indianapolis daily papers the other day had an editorial against sensationalism in the five-cent shows. It was called forth by a set of prison pictures, which were being shown in a North Illinois street house. The front of the theater was arranged to represent a prison and a man in prison garb marched up and down in front. The paper thought this was going a little too far.

The German Catholic Central Verein, which held its national convention in Indianapolis, adopted a resolution against immoral pictures in five-cent theaters. Recently in some of the Indianapolis houses pictures have been shown of a dance which is not very elevating. It is believed that this is calling forth some of the criticism.

THE DIFFERENCE.

"Give two men an equal chance with the same goods and the same advantages in the same territory, and one will turn out to be a John Wanamaker, while the other winds up a brief and inglorious career as Jonah H. Mudd. In most all the cases out of ten it's simply because one has the plain, animal intelligence to ask for business and the other hasn't.

"If you know what you want, and why you ought to have it, for Heaven's sake jump out in front and ask for it. And keep on asking as long as there is anything in sight that looks as if it might come in handy some time."

Get into the habit of installing window displays. A window can be turned into a valuable advertising medium—it can likewise be turned into a poor one. Window displays should be changed at frequent periods and the one thing to be remembered in this connection is simplicity. Do not undertake to pile your entire stock in the window at one time. Just a few articles, one or two neatly printed cards or signs with a neat background, and the trick is easily accomplished.

NOW FOR NORTH POLE RECORDS.

Enterprising Manufacturers Should Get After Both Claimants and Secure Records Describing the Final Dash—Lieut. Shackelton, Antarctic Explorer, Establishes Precedent in Making Records for Gramophone Co.

It is now up to the enterprising manufacturers of talking machine records to arrange with both Commander Peary and Dr. Cook and secure records of how they made their dash for the North Pole. The controversy between these two gentlemen as to "who got there first" make the public interest the keener, and consequently any records which they may make of their adventures would have a tremendous sale, not only in this country, but throughout the world.

As it will take a year or more before the learned societies will pass judgment upon the data presented by the two explorers, it insures at least two seasons of sales activity for the records of the North Pole expeditions.

In making a permanent record of their polar trip for public distribution neither Commander Peary nor Dr. Cook will establish a precedent, for Lieutenant Shackelton, the leader of the British expedition, which came within a very short distance of the South Pole, has made a series of records for the Gramophone Co., of London, in which he tells of his trip, and pays a generous tribute to the bravery and endurance of the men who accompanied him.

The talking machine now occupies such a position of national importance, being found in the homes of practically everybody who desires to keep in touch with the world's progress, that no great movement, whether in art, science, history or politics, can afford not to be recorded for the purposes of public education and instruction and for permanent filing for use in centuries to come. It seems to us that all present-day personalities connected with all the great achievements of the world should make it a point to make permanent records of their views or impressions for the benefit of the generations who will follow us.

[*Since writing the foregoing we have been informed that the Victor Co. have secured a record made by Dr. Cook.*]

RETURN POSTAGE PLAN FAVORED.

Postal Committee Officially Sanctions Adoption of New Return Envelope and Postal Card for Use of Advertisers—No Charge for Stamp Unless Used for Purpose Intended.

A problem of the post office department which has been discussed by advertisers appears now to have a partial solution. Doubtless many merchants who conduct extensive mail advertising campaigns will find in the new plan a help in securing orders from their customers.

A return envelope and postal card have received the official sanction of the Postal Committee at Washington, and will be issued for use in the very near future. The plan is as follows:

"It is required by law that all postage shall be prepaid so that any plan which has been devised will require the co-operation of outside agency, to the extent of securing a deposit of $100,000 with the department as a postal fund. The department will manufacture envelopes and cards bearing a peculiar stamp, which can easily be recognized, distinguishing it from ordinary mail. These the department will sell to whatever form of syndicate which may represent the deposit at the regular price, less the price of the stamps.

"The contractor will distribute them as they may be ordered by advertisers after having a return address printed on them with notice that the stamp is void if the address is changed. Such envelopes and cards endorsed by advertisers may be returned to them without affixing additional stamps, but on arriving at their destination they will be held by the post office till the advertiser pays the regular postage on all such matters as he actually receives.

"The moment the envelope or card is mailed, the stamp which the department impresses becomes a legal stamp and satisfies the law, while it is of no value if the address is changed, and no loss to the advertiser if thrown away. When the advertiser pays the amount of regular postage on all such mail as he actually receives he only keeps the original deposit intact."

MAY BAR FILM EXCHANGES.

Recent Fire in Pittsburg, Pa., Exchange Causing Heavy Explosion Causes Authorities to Consider Barring Such Concerns from City.

An investigation by Fire Marshal W. D. McGill and Superintendent Coster, of the Bureau of Explosives, of Pittsburg, into the causes of the serious explosion in the Columbia Film Exchange in the Ferguson block in that city led Superintendent Coster to announce that in the absence of any other cause for the explosion and in the face of the positive declaration that films will not explode, the cause must be charged to the films, in which event the most stringent laws prohibiting the storage of films in the city must be enacted without delay.

"I cannot imagine," he said, "how any gas that would arise from the burning films could do the damage that occurred. If the explosion was caused by the gas from the films there would only be enough to affect the room in which it collected. There would not be sufficient to damage the other parts of the building. It would have spent itself with the blowing out of the walls that confined the gas. The result gives every indication of the explosion of some more powerful matter, yet the sworn statements of all these witnesses agree to the effect that no chemicals of any nature, beyond the film cement, were kept in the room. This, in spite of the claim that films are non-explosive, leads to but one conclusion—that the explosion was caused by the films. Such being the case it is imperative that the business in the future be barred from the city entirely."

Mr. Dealer

The MUSIC MASTER WOOD HORN means increased profit to you.

The best class of customers become fussy after they get the best selection of records from your stock and it is very difficult to please them. It is just such people who would purchase the MUSIC MASTER WOOD HORN.

They are musical and realize that the metal horn gives a nasal tone, and the great amount of glue used in a veneer horn retards the vibratory freedom.

The MUSIC MASTER is the only *solid* wood horn on the market—the only perfect sounding board ever made for phonographs or talking machines.

SHEIP & VANDEGRIFT, Inc.

PHILADELPHIA, PA.

THE TRADE IN LOS ANGELES.

Present Business Conditions Prove Satisfactory and Outlook Encouraging—Sherman, Clay & Co. Pushing the Victrola—New Victor and Edison Horns Please Dealers—Columbia Co. Trade Improved—A Visit to Santa Barbara and Other Local Points.

(Special to The Talking Machine World.)

Los Angeles, Cal., Sept. 27, 1909.

With the thermometer registering 108 in the shade at the early part of the month, the weather has gradually become cool, until now, when the hot season seems to be passed, the outlook for the month is a pleasant one, while the prospects for the holiday trade give increased encouragement. Outlying towns give favorable reports for the summer season passed, which has been the best for several years. This year's announcements of new types of machines, and also new equipments, are welcomed and generally approved by the trade.

Sherman, Clay & Co. are receiving a number of new mission oak Victrolas, for which they are experiencing an unlimited demand. The new size Victor wood horn has been splendidly received by the trade, and many orders for them have been received. The notice of the remodeled Victor I., which is to be shipped to the jobbers at an early date, is regarded as an important item to figure in the orders for fall goods.

The Southern California Music Co. are giving the new Edison cygnet horn considerable attention, having received an encouraging amount of orders for early shipments. The trade in general are pleased with the new equipment. Several new dealers are reported in the valley.

The Columbia Phonograph Co. are having much better trade than last year. Business in the smaller towns continues to improve, and all indications are of a larger fall trade than ever before. The new style Regent, which is expected to arrive very soon, is creating much interest among the dealers.

Announcement in The World of the two new Grafonola type machines has been the source of many inquiries from the dealers, who seem so much concerned in these new hornless machines. The circular letter, dealing with the copyright and royalty proposition on disc records, which has been received by the trade, is considered a sort of a riddle. Different opinions are expressed regarding it, and further developments are expected.

The Geo. J. Birkel Co. had a splendid summer trade and are looking forward to holidays, which promise to show a large increase over last year.

The Red Seal record rooms of the Fitzgerald Music Co. have been enlarged to accommodate the increased trade in these goods. Business has kept a very even run through the summer weather.

The J. B. Brown Music Co. have added a new record rack for the Edison Amberol records, of which they have recently received a complete catalog. Mr. Hinman, who has charge of the department, is a great enthusiast over the Edison line, and has increased the trade for Amberol records as a result of his efforts.

The writer has visited Santa Barbara and has found trade in very good condition, considering the season's hot weather, which has been exceptional. Santa Barbara is the home of a number of talker experts and enthusiasts, there being in its boundaries Burson & Buelna, patentees of an automatic brake for disc talking machines, which bears their name; A. E. Madison, who has lately secured several patents on his hornless machine, and T. H. Sentell, who some time ago patented a record cabinet and system for indexing records. Burson & Buelna have built an addition to their factory in this city, and are working overtime on the new brake. It is surprising to note the complete equipment of their plant, which contains every mechanical device necessary for manufacturing their article.

R. H. Paulin, who is in charge of the Brown Music Co.'s talking machine department, is pleased with the prospects of the coming fall season. They have a full line of Victor, Edison and Zonophone goods, which it is their aim to keep up as completely as possible.

The Southern California Music Co.'s branch store is doing nicely as can be expected. W. J. Reynard has been away for some time passed, while Frank Reed, a veteran music and talking machine man, who for a number of years was in the service of Lyon & Healy, has taken charge of affairs during his absence. Mr. Reed is greatly attached to southern California, having made his home here for the past two years.

Word has been received from Sig. E. Tessier, who left Santa Barbara some time ago for El Paso, Tex., where he has opened a store of his own. He is well known in Mexico, having been one of the first talking machine men to travel that country.

Once more Santa Barbara has been disappointed in the prospects of more regular steamship service. There was great rejoicing among the merchants over the announcement sent out by a new and independent steamship company which proposed to lower the freight rate between here and Los Angeles and San Francisco. This service has been postponed, to the disappointment of all.

Nick Hern, of Ventura, is expecting to enlarge his talking machine department, which he finds too small to handle his trade. The beet sugar season is in full swing at present, and has so far been very successful.

News from San Diego is that the Wiley B. Allen Co. have added a complete catalog of Columbia double discs, having enlarged their department to accommodate the new line, which has already proved its success in the increased volume of trade they have had since the addition.

Thearle & Co. have announced themselves as exclusive Victor dealers, having disposed of their other stock. They have a fine store and an excellent system of filing their stock of records, keeping the same in cardboard holders and in glass showcases.

The Southern California Music Co. report trade as very lively, especially in Edison machines and records. Mr. Borgum is doing some very attractive advertising.

MILWAUKEE'S BUDGET OF NEWS.

Wisconsin Talking Machine Dealers' Association Formed with About Fifty Members—Officers Elected—Such an Organization Badly Needed—Business Shows Great Improvement—Wholesale Trade Excellent—Want Lawrence McGreal to Run for Office of City Treasurer—Auxetophones in Palm Gardens—News of the Travelers—Awaiting Edison "Amberola"—To Open Branch Store in Oshkosh—A North Pole Window Display—Some Recent Visitors—Other Items of Timely Interest From a Busy Western Center.

(Special to The Talking Machine World.)

Milwaukee, Wis., Oct. 9, 1909.

The Wisconsin Talking Machine Dealers' Association is at last a reality. Responding to a call sent out by the secretary, Miss Gertrude Gannon, of the temporary organization, about fifty dealers from all over the State met at the Lawrence McGreal store, in Milwaukee, on September 17, and organized the permanent association.

Officers were elected as follows: President, Harry Kreinitz, Milwaukee; vice-president, D. M. Kraus, Port Washington; secretary, C. C. Warner, Milwaukee; treasurer, H. Christenson, Racine. The board of directors consist of F. L. Hunt, Philips; D. L. Janes, Wausau, and A. Kuckuk, Shawano.

The dealers met with the conviction that there was an absolute need of a State organization. The idea is for the dealers to meet annually, or more often, if necessary, for the purpose of discussing matters of interest to the trade and pass such resolutions as may be deemed proper to be brought before the National Association of Talking Machine Jobbers, who in turn will bring them before the manufacturers. Dealers to a man felt that great good can be accomplished by united action, and that many abuses can be remedied through the new association.

The meeting for permanent organization was held at a most opportune time. President Taft spoke at the Wisconsin State Fair in Milwaukee on September 17, and dealers combined pleasure with business and came to the city. Several matters of interest to the trade were discussed and much enthusiasm was expresseed.

There is no getting around the fact that there is plenty of improvement taking place in the talking machine business, not only of Milwaukee, but of the entire State. While the retail trade is not at its very best, dealers are more than satisfied and are most optimistic over the outlook. Predictions are being made everywhere that the fall and winter business will be the best in years, and, in fact, one dealer goes so far as to say that it will be the very best that the Wisconsin territory has ever experienced. The wholesale trade has been expanding steadily for the past two months, and at the present time jobbers are meeting with an excellent business. The general feeling among the fifty retail dealers who met in Milwaukee for the organization of the Wisconsin Talking Machine Dealers' Association was that prospects were never better than this fall.

"I think that the fall trade will be the best in the history of the Milwaukee talking machine business," said A. D. Herriman, Milwaukee manager of the Columbia. "General conditions are improving and prospects and immediate business are more than usually bright. A sure indication of better things ahead is the fact that the retail trade is making some big strides. Another bright feature, to my mind, is that a higher class of graphophones is being purchased."

H. Smith, of the Cadillac Cabinet Co., Cadillac, Mich., called upon the Milwaukee talking machine trade recently.

Lawrence McGreal is being boomed for city treasurer of Milwaukee on the Democratic ticket. Despite the fact that the boom was formally launched at a banquet given by the friends of Mr. McGreal, the well-known talking machine man, says that he will not run for the office. A. J. Gruneman, Commissioner of Public Works, who sprung the candidacy of Mr. McGreal at the dinner, declared that the talking machine man was eminently fitted for the position, and that he would do credit to the city and to the party. This seems to be the consensus of opinion, and politicians are predicting that, after all, perhaps Mr. McGreal may be induced to enter the race. There is not the slightest doubt but that Mr. McGreal would win out in the election over any opponent who might be put up, because the talking machine man is one of the most popular business men in Milwaukee. Mr. McGreal is 47 years of age, and has been a resident of Milwaukee for seven years, coming here from Wayne County, N. Y., where he was for many years the representative of the Edison Phonograph Co. During the time that he has been in Milwaukee he has built up the largest and most successful retail and jobbing business in the Wisconsin talking machine field.

The Auxetophone is being used with great success by proprietors of several well-known palm gardens in Milwaukee. E. B. Rebbolz, of the East Side Palm Garden, is featuring the machine day and night, and the Caruso, Melba, Schumann-Heink and other Red Seal records are being appreciated by even a palm garden audience. The Auxetophone at the Rebholz Garden was sold by Lawrence McGreal.

Lawrence McGreal and family and Miss Gertrude Gannon were at Dixon, Ill., recently, attending the funeral of Mrs. M. J. Gannon, mother of Mrs. McGreal and Miss Gannon. Mrs. Gannon was well known in Milwaukee. She was but 49 years of age.

William P. Hope, Wisconsin and upper Michigan representative of the National Phonograph Co., is still at Winnipeg and other Canadian points. News to the effect that he is lining up an excellent business has been received by Milwaukee friends.

The appearance of the new Edison "Amberola," a machine whose form resembles the Victrola to a certain extent, is being awaited with interest by Milwaukee dealers. Cuts and description of the new machine have been received, together with the news that it will be placed on sale by November 1.

Walter J. Augustine, of Fond du Lac, Wis., will open a branch of his talking machine store at Oshkosh, Wis., on November 1. Mr. Augustine will carry on both establishments and will carry a general line of machines, records and supplies at each.

Henry Saak, the enterprising Columbia-Vliet street dealer, has completed the addition to his establishment and now has one of the finest retail establishments outside of the downtown section of Milwaukee. Mr. Saak has been meeting with a big business during the past four weeks.

The Hoeffler Manufacturing Co. was the only concern which had a talking machine exhibit at the Wisconsin State Fair, recently held in Milwaukee, and the big display of machines, supplies and records attracted much attention. The company also had an Auxetophone on display, and this made an especially fine impression on the big crowds. J. H. Becker, Jr., manager of the talking machine department of the company, was in charge.

H. P. Gibbs, of the Rudolph Wurlitzer Co., Chicago, called upon the Milwaukee trade a short time ago and reported the trade outlook to be of the rosiest hue.

A. D. Herriman, manager of the Columbia Co. at Milwaukee, has just placed an especially fine retail branch at the Oesterichs department store, 385 Eleventh avenue, Milwaukee. The department store is in the heart of a very good business center, and Mr. Herriman believes that a fine trade will be lined up. A complete Columbia line will be carried.

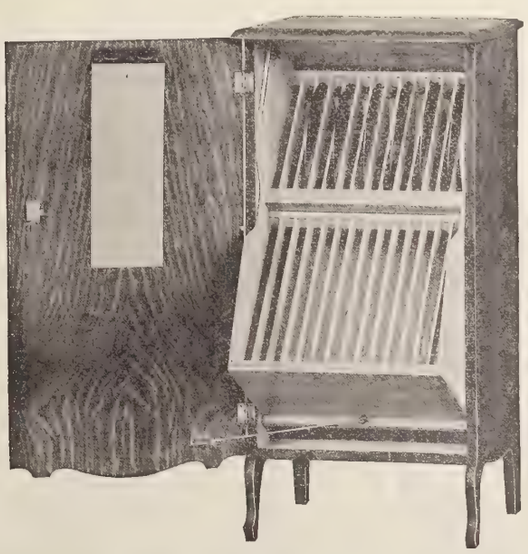
As usual the Hoeffler Manufacturing Co. have been showing a right up-to-the-minute window display that has been attracting no end of attention. The exhibit, the plan of J. H. Becker, Jr., manager of the talking machine department, shows Dr. Cook at the North Pole gazing on the top of the pole where a Victor machine is perched. The display carries various phrases, such as "The Victor, the best thing on earth"; "Can be had at $1 per week," and others. Two large sugar barrels, presumably full of steel needles, have been causing the crowds to gape and wonder at the amount of needles which the Hoeffler Company must be selling.

W. C. Fuhri, district manager of the Columbia Phonograph Co., Chicago, was in Milwaukee a few days ago talking over the fall campaign with A. D. Herriman, local manager.

The Capital City Commercial College at Madison, Wis., seems to be going about things in the right manner, and is advertising the fact that it is using the Edison business phonograph for giving dictation in its shorthand department. Officials of the school say that the machine is a most valuable adjunct, and that beginners as well as advanced receive dictation from the machine.

Suit has been brought by the Standard Talking Machine Co. against Edward Heenan and Herman Schultz, of Sheyboygan, Wis., members of

THE ROCKFORD BOOKCASE CO., has now taken over the line of cabinets made by the Rockford Cabinet Company, in order to better handle the enormous business worked up on this line of goods.



The question of storing record and sheet music cabinets is getting more important every day and this season our cabinets are being illustrated with 6 different interiors. Our catalogue will show you what we have put into the line, and you should have it on file for emergency. Most dealers place stock orders to be shipped during the season.

ROCKFORD, ILL.

the firm of E. Herrman & Co., to recover the value of eleven talking machines alleged to have been shipped to the Sheboygan dealers. The defendants claim that they ordered one machine from the company's agent, and that the latter raised the order to one dozen machines.

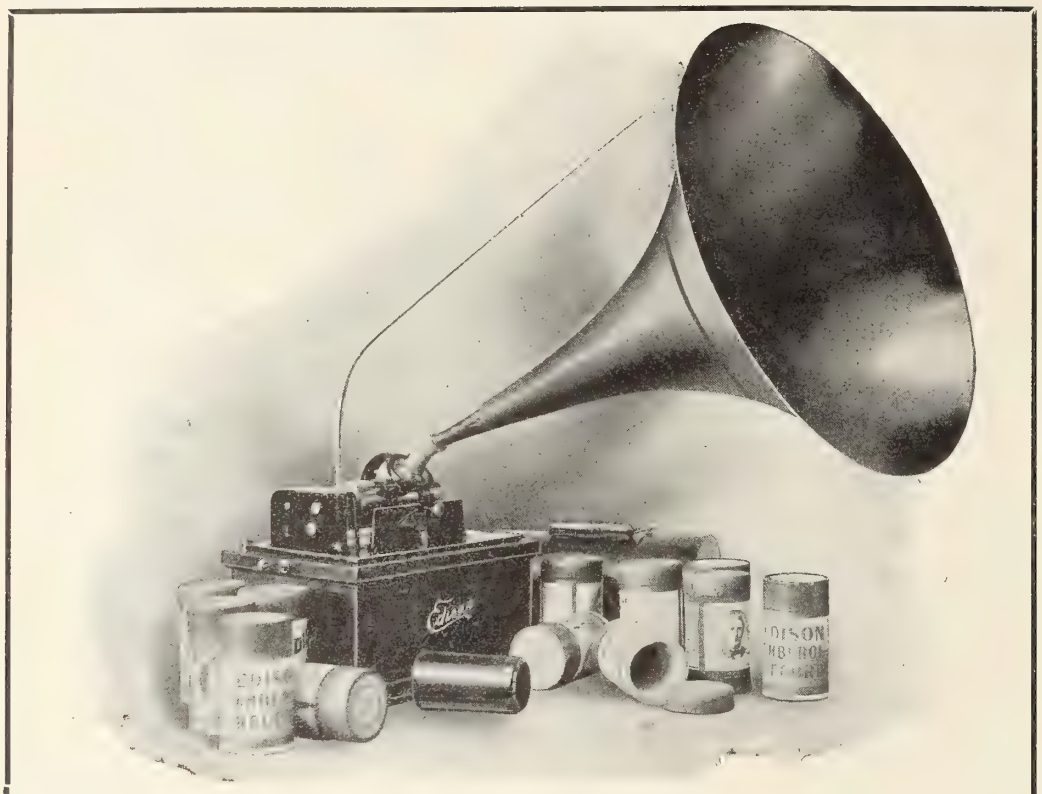
F. W. Chadbourne, district attorney at Fond du Lac, Wis., is using the Edison business phonograph with great success in his legal work. The district attorney has just installed two machines and is finding them especially valuable in taking the confessions of prisoners and the testimony of witnesses. This is the first time in the history of the Fond du Lac Bar Association that these machines have been used in securing testimony.

HANDSOME DISPLAY OF DICTAPHONES.

The Dictaphone Co., who market the commercial graphophone of the Columbia Phonograph Co., General, had a very complete and interesting exhibit of their line at the National Business Men's Show, given in Madison Square Garden, New York, from Sept. 25 to October 1. The space occupied by the Dictaphone Co.'s display was centrally located, and had a large number of visitors who wished to be shown what Dictaphones can accomplish as an economizer of time in office correspondence. The system was warmly approved and a large number of machines were sold for immediate delivery.

WHY PROGRESS LAGS IN RUSSIA.

The prefect of police of St. Petersburg, taking advantage of martial law known as "extraordinary protection," recently issued an order forbidding that talking machines be used except with doors and windows closed. This, however, seems to have stimulated the energy of the possessors of the machines, and the metal voices became busier than ever, grinding night and day. As a consequence the prefect has forbidden the use of phonographs in the entire central district and other parts of the city frequented by business men.

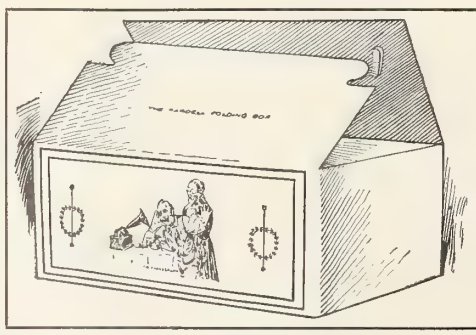


LIN-O-TONE HORNS

For all Styles of Cylinder Machines

WE have just added to our line another size of Lin-o-tone Horn especially adapted for Standard and Home Machines. It is on the same lines as the Fireside Horn, only much larger. The tone and finish is equal to that in every respect which is sufficient recommendation in itself.

Lin-o-tone for Fireside Phonograph - - - 21 in. long, 17 in. bell. Retail Price, $3.00
Lin-o-tone for Home and Standard Phonographs - 26 in. long, 21 in. bell. Retail Price, $5.00
Colors Red, Blue and Black



Pardell Folding Boxes

No. 3, holding three cylinder records $1.00 per hundred

No. 6, holding six cylinder records $1.50 per hundred

No. 12, holding twelve cylinder records $2.25 per hundred

Most convenient form of package for delivering records to customers. Help to sell more records "to fill up the box."

TRADE IN THE MONUMENTAL CITY.

Fall Business Opens Up to Entire Satisfaction of Dealers—Improvement Steady and Sure—New Columbia Machines Provoke Considerable Interest—Best Selling Record of Month—Amberol Records Increase in Popularity—What Various Houses Are Doing to Get Business in Baltimore and Locality.

(Special to The Talking Machine World.)

Baltimore, Md., Oct. 5, 1909.

September proved to be a better month for the sales of talking machines and records than any of the summer months and this business betterment seems to have set in for the remainder of the fall and winter. Already the showing in the trade for the first few days of the present month is much better even than was the case for the same days in September, so that the dealers believe that the slump is slowly but surely giving way under the advance of an increased business. The predictions of the dealers during the early summer, in fact, seem about to be fulfilled, for at that time they said that there was every indication that things would be better. The improvement has not been rapid, and neither do the dealers expect this to be the case in the future. What they look for and what they believe will take place is a steady advancement each week.

There have been a great many inquiries at the local branch of the Columbia Phonograph Co., and at Sanders & Stayman, who handle this line of machines here, regarding the new Regent Grafonola and De Luxe Grafonola and these inquiries lead the dealers to believe that they will prove quite a popular innovation in this city. While there are not a great many of the new machines on the local market, the prospectuses have been in great demand. The Regent Grafonola, particularly, seems to be a great favorite, for the possibility of having a writing table or a card table, where either business or pleasure may be indulged in while music is being played, seems to appeal greatly to Baltimoreans.

At Sanders & Stayman it was stated that during the past month or so the record, "She Has Rings on Her Fingers and Bells on Her Toes," on both the Victor and Columbia machines, has proved the best seller. Outside of this record and as a general rule, all the popular song records have had a good run and are still in heavy demand.

In the Edison line, Manager Grottendick, of E. F. Droop & Sons Co., who handle both the Edison and Victor stated that the Amberol records have been in demand for the past several months and continue to be popular with Edison machine owners.

NO DUTY ON RETURNED FILMS.

Those Made Here and Sent to Canada May Come Back Free.

(Special to The Talking Machine World.)

Washington, D. C., Oct. 6, 1909.

The Treasury Department has decided that moving picture films of domestic manufacture can be taken to Canada for temporary use and entered into this country afterwards as free of duty. This regulation was handed down to-day in a letter to the Collector at Port Huron, Mich.

The decision points out further that a special provision was made in the new tariff governing photographic dry plates, or dry films, etc., which are exposed while abroad. Exposure in this case means an advancement in value, and, consequently, a duty was placed upon them. But the moving picture films, it is stated, are exempted from this provision.

FILES PETITION IN BANKRUPTCY.

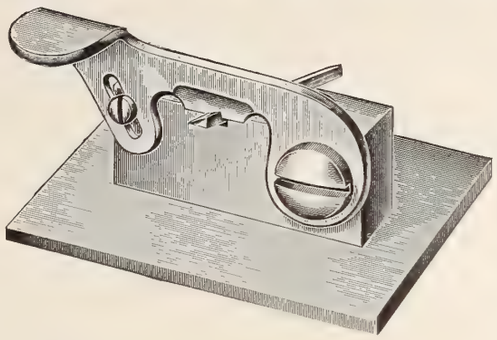
R. V. Jones, proprietor of the Minneapolis Phonograph Co., Minneapolis, Minn., recently filed a petition in bankruptcy with liabilities of $4,000 and assets estimated at $175. The stock of Victor and Edison goods was bought by local dealers.

A NEW PERFECT CUTTER

FOR REPOINTING

FIBRE NEEDLES

PERFECTION



SIMPLICITY

This latest cutter is manufactured on scientific lines and is as near perfection as is possible to make it.

The blade is so constructed and adjusted to the block that a **sliding motion** is obtained on the downward stroke, thus insuring a **clean, smooth** and **perfect** point.

This blade is made of the highest grade tool-steel, properly tempered—can be easily detached from the block and resharpened with a small honing stone.

The base and block are nickel-plated—highly polished.

This new cutter will not only facilitate the sale of **Fibre Needles** but will prove a delight to all lovers of this **Ideal Needle.**

Complete instructions and cut in each box.

Promptness is our hobby

We've been riding it for 10 years, and *we've never been thrown.* "Promptness" is a trustworthy steed—it is accurate and fleet-footed—and it can always be depended on to win the race.

Our hobby has the fastest gait of all—GOODS SHIPPED SAME DAY ORDER IS RECEIVED.

We and our hobby are backed by a long list of satisfied Victor Dealers. They count on us to deliver just the goods they order, and to do it on time. And they always make money through us.

Why don't you take this as a straight tip? Why not break away from that distributor who is in the "also ran" class? Why continue to drop money and customers and business on such "old skates" as "will send tomorrow," "must get from factory," "too many orders," "just out," and the like?

Come join our money-making backers, and prove that our hobby is always fresh and in the pink of condition, and always has a winning streak. Send us your next rush order for Victors, Victor Records, Victrolas, record cabinets, horns, fibre cases, needles, extra parts or accessories, and see how quick we come down the home-stretch.

We'll let you be the judge. We know you'll award us the purse as the fastest and most accurate Victor Distributor in the race.

Write us to-day for the "books." We'll send you our catalogues and also enclose our handsome booklet called "The Cabinet That Matches," showing record cabinets that exactly match each style Victor. Drop us a postal *now.*

PACIFIC COAST TRADE NEWS.

Strong Increase in Retail Trade During Month—Good Holiday Business Expected—Wholesale Trade Picks Up—Peter Bacigalupi on Eastern Trip—Wiley B. Allen Co.'s Talking Machine Department Forging Ahead—Sherman, Clay & Co. Handle Record Victrola Business—Columbia Co.'s Spokane Store Makes Good Report—Cygnet Horns Popular—Heine Co. to Install Talker Department.

(Special to The Talking Machine World.)

San Francisco, Cal., Oct. 1, 1909.

The increase in the city retail trade in talking machines has probably been a little less than was expected during the past month, though there is certainly much more activity than at the end of summer. The vacation season is over for the year, and people are coming back to the city from all the surrounding suburbs for the winter season. The crowds on the streets are larger than they have been since the fire, and from general appearances one would think almost a holiday business was being done, but most dealers say that people are not buying as much as it would appear. The larger dealers in the down-town district, however, have noted a marked improvement in their sales for the last few weeks, and there is every reason to expect continued improvement from now till the holidays.

Wholesale trade has picked up in good shape, and the dealers in outside districts report an exceptionally strong demand for all sorts of talking machine goods. The harvest season is over, and country people are settling down for the winter quiet, while a plentiful supply of money enables the outside dealers to make a large proportion of their sales on a cash basis.

Peter Bacigalupi, the oldtime talking machine dealer of San Francisco, is now in the East, and will remain away for several weeks. He will stop for some time in Chicago and New York, calling at all the talking machine factories, and visiting some of the piano manufacturers as well, for the purpose of making arrangements for next year's business. It is reported that he has already placed some large orders. Peter Bacigalupi & Son have taken large orders for the new Cygnet horns all over the State, and are getting many inquiries for the new Edison hornless machine, which they expect to have in stock before the first of the year. They report a decided improvement in the business generally, and consider the outlook very auspicious for the local retail business during the next three months.

As the talking machine department is a distinctly new departure for the Wiley B. Allen Co. it was not expected that it would have a very heavy run during the first month or two. The company are gradually becoming known as a talking machine house, however, and Mr. Black, who has charge of the department, says that a very auspicious start has been made, with a distinct improvement toward the end of the month. While the department is in the Sutter street side of the building, an attractive talking machine display is shown in the main windows on Kearny street, keeping this branch of the business in the eye of the public. By the end of the year it is expected that the department will be doing about as much as the talking machine departments which have been longer established.

A. G. McCarthy, of Sherman, Clay & Co., has new sales records to report nearly every month. Last week, he says, was the best for Victrola sales in the retail department since that machine has been handled, with the exception of the week before Christmas last year. The number of cash sales of Victrolas recently has been a matter for some surprise. Heavy shipments of Victrolas are now coming in, as the company expect an increasing demand for them during the holiday season, and wish to be amply prepared. Mr. McCarthy is expecting the greatest holiday trade the company ever had, both here and on the outside. The wholesale business, he says, is very active, with all the men on the road, and sending in good orders. In regard to records, he says three new ones by Tetrazzini, who has great popularity among San Franciscans, are having a very large sale.

Sherman, Clay & Co. have been making some improvements in their talking machine department on the third floor, which will make it much more attractive and convenient. Two offices have been removed to make way for a large room especially devoted to Victrolas, and the room has been tastefully decorated. The record demonstration rooms have also been changed, glass partitions being put in, as the experience in the new Oakland store has demonstrated that the heavy double walls, formerly installed to exclude outside sounds, were unnecessary.

Willis S. Storms, the popular young traveling man of the Columbia Phonograph Co., with headquarters at the San Francisco office, has surprised his friends by becoming a benedict. The bride was Miss Daisy Meade, a popular society girl of Coalinga, Cal.

The Columbia Phonograph Co.'s store in Spokane, Wash., has been moved from its old quarters to the Chant Music Co.'s store, on the best business street in the city, where there is ample room for both wholesale and retail departments.

The Columbia store in San Francisco still remains on Van Ness avenue, and is unlikely to be moved before the end of the year, though arrangements for a permanent location are likely to be made at any time. The city retail business is accordingly rather quiet, but this is more than made up by the activity of outside trade. Manager W. S. Gray has just returned from a visit to Kirk, Geary & Co., the jobbing agents at Sacramento, Cal., and is well satisfied with the progress made in that territory. The local office now has in stock the new Grafonola Regent, which is steadily gaining recognition in this city. Quite a number were sold from illustrations before the stock was received, and since then the machine has been taking hold in good style. The demand for popular priced graphophones also grows as employment becomes more general.

A number of new rooms have been added to the talking machine department of the Wiley B. Allen Co.'s Oakland store, to provide for the increasing trade in that city.

The Pacific Phonograph Co. got in a large shipment of Cygnet horns about a week ago, and are in a position to supply the trade. The horns have been meeting with great favor from Edison dealers all over the State, and large sales have already been made. The Pacific Phonograph Co. now have a number of men visiting the outside trade, and they are doing effective work in all parts of the territory.

Clark Wise & Co. are still devoting considerable attention to the talking machine department, and find it at present about the most profitable in the establishment. Mr. Wise believes, however, that the trade is not as active in the city as it should be, and looks for a much heavier trade next month.

The Heine Piano Co. have definitely determined to install a talking machine department when the new store on Stockton street is opened, which will occur in a few weeks. Final arrangements have not been made, but Mr. Heine expects to have one of the most attractive departments in the city.

INITIAL ORDER FOR $5,000.

This Was Placed with the Columbia Co. by a New Pittsburg Customer.

A leading music dealer in Pittsburg, Pa., who recently added the Columbia line, placed an initial order with the Columbia Phonograph Co., General, for $5,000.

E. N. Burns, manager of the Columbia Phonograph Co.'s export department, now in Europe, is due to arrive in New York November 10.

Orders for the new Grafonola cabinets are coming in from the Columbia jobbers in large numbers. The new lines have made a tremendous hit with the trade.

TRADE HAPPENINGS IN LONDON.

Remarkable Improvement in Trade Throughout London and the Provinces—Season's Business Expected to Double That of Last Year—Gramophone Co.'s Good Report—Cheap Machines Almost Entirely Eliminated—St. Petersburg Police Put Ban on Gramophones—National Co.'s Advertising Plans Please Dealers—How the New Records Are Being Received—New Rena Double-Sided Records—More Anent the Copyright Question—New Gramophone Records—David Reis in Hot Water—Harry Lauder's Secret—All the News of the Month.

(Special to The Talking Machine World.)

London, Eng., Oct. 2, 1909.

It is a great pleasure to me to be able to report a remarkable improvement in business experienced by the trade as a whole during the last week or so throughout London and the provinces. One manufacturer even goes so far as to compare it with the rush usually felt just before Xmas, but although this may be a little exaggeration, the fact remains that records and talking machines of all classes are coming into their own again after many months of depressed sales. It but confirms the accuracy of my remarks in this journal, made some few months back, which in effect outlined the season's prospect as very good, although not of a "booming" nature. This trade is peculiar in so far as sales fluctuate sometimes to an alarming extent; the demand for talkers being anything but an even one. There are, of course, isolated instances to the contrary, but I estimate on a general average this season's turnover in the aggregate should about double itself compared with last year. And it will, too, if dealers can but realize the enormous possibilities resulting from an attractive window display, circulars, local newspaper advertising, and other trade-stimulating schemes.

It almost seems paradoxical, yet in spite of the drop in Gramophone shares, and the reduction of the dividend from 15 per cent. to 5 per cent., I am authorized to state that the gramophone profits and sales in Great Britain for the year ending June 30, were better than any other year bar one, and that was the "boom" year. Again, figures are just out which show that last month's (Sept.) trading was the best ever, against even time, in the whole history of the company. So you see that, although the directors consider it advisable to restrict the dividends, the business is there, and it only remains for you to share in that prosperity by the aid of enterprising methods and hard work.

A not unwelcome feature of present-day conditions is the almost entire elimination of the very cheap machine. The minimum price of a good phonograph is recognized at two guineas, while a disc machine selling for less than fifty shillings is an unreliable and dear purchase. Who can deny that one drawback to the progress of this industry has in the past been found to center around the rubbishing instruments sold under the guise of a specious phraseology? It is more than confirmed by the public. A cheap machine does not now appeal to them, as the glamor of the thing as a scientific wonder has passed. We must offer something good or get out of the business. That is the motto to-day, and to live up to it will make for influence, progress, lasting trade, and—profits.

Gramophone Forbidden in St. Petersburg.

The maniacal Russian Police Prefect is again venting his spleen on the unoffending talking machine. At the instance of some overzealous students, and certain other not too intelligent scribes, he issued a decree that Gramophones were only to be played behind closed doors and windows. This, however, according to a writer in the Daily News, brought but little satisfaction to the complainants, inasmuch as further letters were showered upon the Prefect imploring him to save them from the torture of its—that is, the Gramophone's—metal voice. This Prefect or Prefects at once got right down to it. He thought and pondered, until suddenly a great idea struck him full in the face. Why not suppress; ban the infernal machine altogether from the city—why not? The order went forth forthwith under the act of—martial law! Isn't it delightful, fancy martial law versus music—in the shape of a metal voice! What next?

On inquiry at the London offices of the Gramophone Co., we learn that the decree applies only in the business quarter of St. Petersburg, and does not affect the populous residential districts.

News from the National Phonograph Co.

Edison dealers view with immense pleasure the commencement of the national advertising campaign, for they see in it evidence of confidence and faith in the future of this business. Daily newspapers, weeklies, magazines, etc., all reflect the striking advertisements, bearing Edison's signature, which go forth to the dealer's aid, and bring him business. In return for this generous support, every dealer should demonstrate his appreciation by co-operation and hard, conscientious work.

In addition to the new goods already introduced for this season, the company have given notice of the issue of a new Gem combination type phonograph to retail at £3. Its new features are: stronger mainspring in motor, to run fully one Amberol or two standard records, new winding ratchet and pawl, 19-inch maroon colored horn, the whole beautifully finished and equipped with model K repro., having model C, and H, sapphire assembled in separate arms, mounted on swivel plate set in the overhanging weight; the small lever attached readily, enabling either sapphire to be brought into play.

We heartily congratulate the company upon the advent of this undoubted—long-felt want, which will be the means of enormously stimulating Amberol record sales.

The Theft of Time.

Employes whose dishonesty is the most costly are often those who defraud the employer through thefts of time, through half-hearted effort, or through placing their own interests above those of the firm. Thus moralizes Modern Business.

Speaking Illusion Displayed on Screen.

Thus is described the latest combination of cinematograph and talking machine. Called the "Fonematograph"—a most appropriate name, by the way—the new machine is said to present nature herself, so perfect is the synchronism. The Fonematograph is very popular at the electric theaters, and its mission is at once amusing and instructive.

Profitable Trading Lines for the Season.

The thousands of dealers who are now busy preparing for the season's train of business may welcome a brief resume of some leading and profitable lines to stock. Outside the ordinary cylinder products, a recent introduction is the Columbia Indestructible record, selling at 1s. 6d. Attempts in this direction hitherto, have proved failures, principally on account of an unfortunate tendency to warp, consequent bad surface, damaged sapphires and broken diaphragms. It is safe to assume that in the Columbia Indestructible, all these faults are only conspicuous by their absence, or the record, you may be sure, would never have been placed upon the market. Here then is one line which you can recommend with full confidence.

Another is the 200-thread "Amberol" record (1s. 6d.), and the new "Fireside" Edison phonograph (4 guineas). Both have won enormous praise from dealers simply because they find additional profits in handling them.

Again, the once-popular "Sterling" record has been revived after a somewhat lengthy sleep, and is now on the market at 9d. and 1s., as good as ever, under the auspices of J. E. Hough, Ltd., and don't forget the Clarion 200-thread "Ebonoid" cylinder, good artistes, good tonal quality, and

MACHINES TO PLAY ALL TYPES DISC and CYLINDER

The Premier Manufacturing Co.

THE POINT, WANDSWORTH, LONDON, S. W., ENGLAND

FROM OUR LONDON HEADQUARTERS—(Continued.)

providing at the selling price of 1s. 3d., a good profit.

In the disc field, there is something new in the enclosed-horn machine line, i. e., the Edison Bell "Primaphone." This embodies an interior metal horn, which, by a series of hinged extending flaps folding outwards, one obtains a full-sized trumpet in a small compass, so to speak. An additional feature of this machine is the fixed tone arm, which, being stationary, leaves only the weight of the sound-box supported by a light wooden arm, on the record. Attached to the sound-box itself (caused to advance by the sound waves), is a rubber telescopic connection projecting into the fixed tone arm. Many are the claims for this device, but that its use decreases wear and tear of records must be obvious to all.

Perhaps the best proposition of any may be found in the new Clarion 200-thread 10-inch double-sided phono-disc, retailing at the remarkably moderate price of 3s. Here are possibilities for business which even the most apathetic dealer can appreciate. Fancy a solid ten minutes of good music on each record; can you realize it? Don't stop thinking, though, better post off your request for further information to the makers—The Premier Manufacturing Co., Ltd., The Point, Wandsworth, London, S. W.

Rena Co.'s New Departure.

The Rena Manufacturing Co. announce a new departure in the shape of 12-inch double-sided discs. Hitherto only 10-inch double-sided records have been manufactured, but the increasing call for more and longer music or songs on individual records has induced the company to meet the wishes of their dealers. Each selection on the new records will play about four minutes, thus at the competitive price of 4s. retail, record buyers are provided with music lasting eight minutes. Forty-five records figure in the first catalog, and among the artistes I notice such well-known talent as Miss Ruth Vincent, Mr. David Bispham, Mr. Irving Gillette, Royal Guards Band, and Haydn Orchestra, etc. The Rena Co. are certainly out to meet all wants in home and foreign markets, for, in addition to the 10 and 12-inch double records, they manufacture no less than nine models of the ordinary disc machines, ranging in price from 50s. up to £11 10s., and twelve different types of the "Sonola" interior-horn cabinet machines priced from £10 to 27 guineas. Each machine is characterized by a distinctive design—handsome in appearance, and all are fitted with the now famous "Planet" motor—the works of which being built parallel with the turntable insures very silent and true running. The Planet motor is also noted by the fact of its being incased, thus enabling the principal gearing to run in a bath of grease. Foreign and colonial traders should take advantage of this comprehensive array of lines "that will sell," and write for illustrated lists and particulars of trading terms, etc.

New Pathephone Models.

Containing several original features, a new Pathephone model of recent introduction to the trade has evoked much comment. In design it is a very fine piece of work, but that of most interest is the new patent starting lever which also acts as a brake. When pushed over this lever starts the turntable immediately at full speed—even with the sound-box on the record. This device is especially a boon in playing Pathe's 20-inch discs, as waiting for the turntable to obtain sufficient momentum is thus entirely obviated.

The Junior Majestic is another new model; fitted with the loud majestic sound box, it particularly meets the call for a moderate-priced machine to play 20-inch discs. A guarantee for free repair, etc., any time, is given with each majestic sound box.

Sales of the phono-cut record have in the past suffered materially through the lack of an interchangeable sound box for the Gramophone models. Recognizing this, Messrs. Pathe Freres some time ago issued a swan neck sapphire sound box, which has been found to fill the proverbial long-felt want. In less than a minute any Gramophone machine can be adapted to play the phono-disc at a very moderate cost. Such a matter is worth investigation by all dealers who desire to make an effort toward a successful season, since without doubt there is and has been for some time a big demand by needle-disc machine owners for a means of getting within reach of the very extensive and high-class repertoire contained on phono-discs.

Royalty Record or Not?

Preface.—The discussion between this journal and the London Music Trades Review anent the copyright question is now closed—the football season is with us.

The next point is, what effect will the coming dissolution of Parliament have on the question? In any case, although the committee may have been quite an independent one, there is every reason to suppose that legislation on the matter will be considerably delayed if the Liberals fail to win back in office. And there are few in this trade who do not hope so. Then let the cry go forth—"Tariff Reform and NO copyright taxes."

Interviewed by your correspondent, Mr. Phillips, secretary of the Board of Trade Copyright Committee, stated that practically all the evidence required has been taken, and there are no further witnesses to be examined. The committee sit again about October 15 to discuss and prepare their report, which under the Board of Trade regulations, will be printed as a blue book some time later.

In discussing the situation and its effect, a leading member of the trade, who desires to remain anonymous, has stated that the composition of the copyright committee, in his opinion, lacked the impartiality one expects in a government commission, since those known to be in favor of royalties were in the majority. "The talking machine trade cannot claim, therefore, to

have had a fair fight; almost at the outset of the committee sittings, their attitude in favor of the publishers being most marked. No accurate forecast is however possible, and I do not attempt it, continued my informant, except to say that one or two points were very obvious to me, and I mention them only in the strict sense of a purely personal view. Regarding the basis of royalty, it was urged by some that this would be justly met by a small percentage on the net selling price of each record, but that which appears to have found greater favor is the assessment of a small tax fixed irrespective of class. I should say further, that the committee report will not recommend monopoly, this being looked upon as injurious to the best interests of both sides." One other matter of vital interest, that of retrospection, my friend would not commit himself to by any statement whatever. In this regard, however, I have previously reported in The World some opinions of witnesses which go to confirm the general view that any act passed would practically exempt all past and present matrices from assessment.

Gramophone Co.'s October List.

Particularly noticeable in the Gramophone October list is a splendid series of records by Mr. Kennerby Rumford, all of surpassing excellence. The titles are "Thou'rt Passing Hence" (Sullivan), "King Charles" (M. V. White), "Three for Jack" (Squire), "The Devout Lover" (M. V. White), and (a) "Myrra" (Clutsam), (b) "Border Ballad" (Cowen). Miss Amy Castles, the young Australian soprano, gives us a fine rendering of Willeby's "The Perfect Way," while the great and only Harry Lauder sings "Aye, Waken O'" in his most humorous style. Selections I and II from the popular comic opera "The Arcadians," by the Band of H. M. Coldstream Guards, who also play No. 3 "Ballet Egyptian," and "Semiramide" overture (Rossini). Other good records are "Mr. Blackman Cake Walk," by Pryor's Band; "When Shadows Gather," Evan Williams; "Rule Britannia," Peter Dawson; "Laura" (Hymn d'Amour), Mlle. Alice Verlet; "When All Was Young," from Gounod's Faust," by Madam Kirkby Lunn; "The Pipes of Pan" (from the "Arcadians"), by Miss Marion Jerome; "Dingle, Dongle, Dell," Miss Margaret Cooper; "In England, Merrie England," quartet —Miss P. Allen, Miss H. Lakin, Messrs. John Harrison and R. Radford; "So Long, Mary," Miss Corinne Morgan and chorus; "La Cinquantaine," a beautiful harp solo, by Alfred Kastner; at the 'cello, too, Mr. Boris Hamburg makes an equally nice record—"Mazurka" (Chopin); "La Filense" and "Rondo Cipriccioso" (Mendelssohn), is brilliantly rendered by Herr Vladimir de Pachmann at the piano; "Nocturne in D major" (Chopin), Miss Kathleen Parlow (violin); and last but not least "Serenade d'Amour" (von Blon), superbly rendered by the famous Renard Instrumental Quartet.

The Charge Against David Reis.

The hearing was continued at Bow street, of the charge against David Reis, of making false statements in a statutory declaration under the Companies Act of 1900, relating to the British Sonogram Co. (Ltd.), formed for the purpose of manufacturing and dealing in records, etc. Defendant was one of the directors, and he also acted as assistant manager and secretary at a salary of £400 a year. At a board meeting held in April (the company was registered in February, 1907), the defendant reported that application had been received for 5,000 shares, and it was agreed to go to allotment. It was alleged that in point of fact only £136 had been received in respect of 1,360 shares, and the defendant allotted to himself and his nominees the necessary number of shares to make up the 5,000.

It was also alleged that defendant made the statutory declaration necessary before the company could commence business to the effect that all the directors of the company had paid the calls due in respect of their shares, and that this declaration was untrue. There was a further charge against defendant of inducing by means of false pretenses Mr. Harry Welsh-Lee to pay £300 to the company. Evidence in support having been given, Mr. Arthur Newton urged that the case was not one which should be sent for trial. The defendant was a schoolmaster, who gave up an appointment at £150 a year to go into the company, and he had been deceived and fleeced by two men, who had been described by one of the witnesses for the prosecution as "a couple of company-promoting rogues." With regard to the £300, the defendant had not had a penny piece, as the money was paid direct into the account of the company, and, in fact, defendant had only received £50 from the company, while in actual cash he had lost over £300. The defendant, who reserved his defense, was committed for trial, bail being allowed.

Harry Lauder Off to New York.

Harry Lauder left here Oct. 2, by the outgoing steamer for New York, where he spends two months, afterwards visiting other cities in the State. Responding to the toast of his health at a farewell luncheon, Mr. Lauder exploded a secret in these words: "A always mak' mysel one o' ma public. A like tae tak' them by the hond ower the footlights an' say, 'A'm here tae mak' ye laugh, an' ye'll juist hae tae do it.' Its the maist deeficult thing in the world tae mak' a mon lough. Men are by nature o' a sad temperament, which weemum often hae a lot tae do wi.'"

Popularity of the Twins.

The wonderful popularity of "Twins" has even penetrated now to the colonies—particularly in South Africa and Australia, where they are selling freely.

Mr. Turner Succeeds Courant.

L. H. Courant, managing director of Pathe's London house, is, we regret to say, severing his connection with the company this month after many years' association. S. P. Turner now reigns in his stead and, although we shall all be sorry to lose Mr. Courant, those members of the trade, and they are many, who have the pleasure of

FROM OUR LONDON HEADQUARTERS—(Continued.)

Mr. Turner's acquaintance, will join us in tendering to him our heartiest congratulations on his new appointment.

"The Voice of the Century"

Is the apt description given by the Gramophone Co., to a series of fine records by Madam Clara Butt, whose voice, strange to say, has hitherto defied attempts at successful recording on the needle-cut disc. 'Tis an everlasting wonder after hearing the clear and natural manner of enunciation embodied in these new records, since it is seldom one hears of a first-class voice not being amenable to the charm of the recording expert. After this, the Gramophone Co. may be said to have reduced recording to a fine art indeed, and in view of Madame Clara Butt's statement, "These records are in very ruth my living voice," no singer, however exalted, can hesitate longer in handing down his or her voice for the benefit of the community, and the generations yet to come. Madame Clara Butt's records will meet with a reception never before experienced (class considered), by any artiste. That is my prediction.

Press Demonstration at Savoy Hotel.

The Gramophone Co. have arranged a press demonstration at the Savoy Hotel on Oct. 4. Madame Clara Butt and Mr. Kennerby Rumford have promised to be present and sing selections from their repertoire, which will afterwards be reproduced on the Gramophone.

The musical critic from each of the leading newspapers has been invited, with the result that some very fine notices may be looked for.

The Current Zonophone List.

The pick of the current Zonophone list is embodied in the following records to hand: 10-inch, "Toreador Song" (Carmen), by Peter Dawson and chorus; "Rejected Love Waltz," Bohemian Orchestra; "I Am a Friar of Orders Grey," Peter Dawson; "Love Me All the Time," Charles Handy; "I Love a Lassie," Harry Lauder; 12-inch—"Czardas March," Black Diamond band. All good selling records these, and safe stock in almost any locality.

Service Between Europe and Africa.

Experiments are being made with a view to establishing a direct wireless telegraphic service between England and South Africa. If the Colony's grant is sufficient a uniform rate of a penny per word might be possible.

In the "Twins" November list appear some splendid selections, notably four by the band of H. M. 1st Life Guards.

Separate Company to Handle Dictaphone.

The Columbia Phonograph Co. have made arrangements for the Dictaphone to be exclusively handled in the United Kingdom by a distinct organization styled The Dictaphone Co., who are located on Oxford street, London, W.

New Company Organized.

Phonograph Records Library, Ltd., registered to carry on a library for the hiring out of records for talking machines, etc. Capital, £1,000. Office, 25 Farnham Green Terrace, Chiswick.

Has Grievance Against Caruso.

Described as a medicated lozenge manufacturer, poetic author and operatic song-writer, James W. Thom appeared at Edinburgh court with a grievance against Signor Caruso, whose manager, so Thom asserted, requested him to write four songs. These he sent for consideration, but defendant had left the country without returning them, and when the Sheriff's officer went to serve a summons on Signor Caruso he was ejected. In answer to the Sheriff, complainant said he made the lozenges to enable people to sing his songs. (Laughter.) The Sheriff: "I see Signor Caruso needed neither your songs nor your lozenges. You had better go where he is in England and get the summons properly served." The plaintiff: "He is away to America, and I will have to wait until he comes back." (Laughter.) Sheriff: "I'm afraid so. The songs will perhaps be all the better for keeping."

Recent Beka Issues.

Recent Beka issues to hand are as follows: selections I and II from "The Arcadians," "Our Miss Gibbs" and "The King of Cadonia," played by the Beka London orchestra; "In Cellar Cool," and "The Veteran's Song," powerfully rendered by Worman Williams, viola solos. "Fantasie Pagliacci," and "Souvenir des Alpes" are two beautiful records by S. L. Wertheim (of Queens Hall), and equally well played is A. Fransella's two piccolo solos, "The Wren" and "Sylva"; of the bunch we give the palm to Messrs. Henley (violin), Lebell ('cello), and Geehls (piano), 12-inch double Meister records of "Serenata" (Moszkowski) and "Chanson Triste" (Tschaikowski). The instruments blend as one, and each selection is perfectly recorded.

Sounds Like Conan Doyle.

Nearly five years ago goods to the value of £3,000 odd were stolen from the premises of Messrs. J. J. Stockall & Sons—the talking machine factors of Clerkenwell Road, London. On Monday, November 28, 1904, when some members of the staff arrived at the company's premises, they were surprised to see the doors of the safes standing open, and valuable silver and other articles scattered about. On further investigation, one of the assistants found Thomas Stockall, managing director, lying in a dark corner, bound and gagged. No arrests were made and the whole matter was shrouded in mystery until a week or so ago, when the sequel was the arrest of Mr. Stockall for having committed the deed himself. In a subsequent confession the prisoner stated that he did the whole thing himself. About seven o'clock on the previous Saturday, I tied myself up, and found that I could not undo

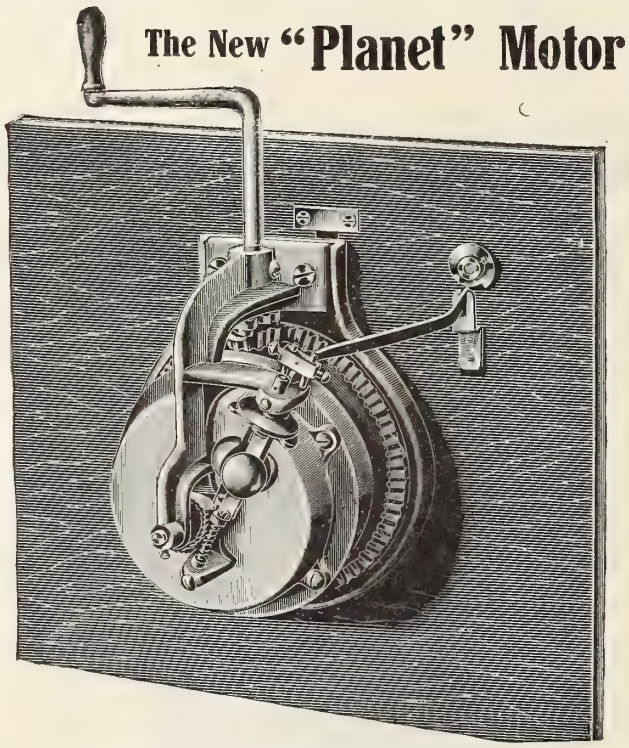
The New "RENA" MACHINES

"RENA" MACHINE, No. 4, £5 10s.

Cabinet: Solid Oak, size 16 in. by 16 in. by 8½ in. Fitted with "PLANET" 16-minute Motor. Self-regulating SPEED INDICATOR. Nickeled Aluminum TAPERED TONE ARM. Improved Sound-Box, fitted with Patent Needle Clip.

Prices range from £2 10s. to £11 10s.

The New "Planet" Motor



The "PLANET" Motor is an improvement on all others and embodies an entirely new principle of construction. As may be seen above, the gearing is horizontal, running parallel with the turntable and so minimizing friction. All the gearing is encased and runs in a GREASE BATH. It is DUST-PROOF, therefore always CLEAN and SILENT-RUNNING. It is also CLIMATE-PROOF. So simple that there is nothing to go wrong. All "PLANET" Motors are guaranteed. "PLANET" Motors are fitted "RENA" Machines from £3 10s. upwards.

Rena Double Sided RECORD

The Records that are known by "Every Record a Picked One!"

10″ double sided 2/6

RENA

12″ double sided 4/-

The biggest sellers in England.

No records have ever achieved so instantaneous and huge a success, wherever they have been introduced, the sales have been phenomenal and steady. **Rena Records** are more musical, of better tone, superior volume, and infinitely more understandable than the records of the past. People say they wonder how they can be made for the money. The latest success is the Rena.

12″ double sided Record at 4/-. The Artistes presented on this magnificent series include: Miss Ruth Vincent, Mr. David Bispham, Miss Margaret Lewys, Mr. John Bardsley, etc. etc.

Such value, indeed, such wholly remarkable records are absolutely unprecedented in the history of the trade.

Catalogs of 10″ and 12″ Rena Records will be sent post free upon application.

the rope, as the knot slipped down, and I had to remain until found on Monday morning." The matter was gone into before a magistrate, and a remand ordered.

The "Flex" Diaphragm in Favor.

From all parts of the world, Mr. Clarke's "Flex" is winning appreciation, and users are unable to find words suitable to express their satisfaction. That the Flex gives wonderful results, I myself would confirm since giving it a thorough test. Dealers in the States and the colonies desiring a profitable agency, better write Mr. Clarke, at 5 Longford Place, Longsight, Manchester. Here are two sample testimonials picked out at random:

Taranaki, New Zealand, July 9, 1909:—"I certainly must compliment you on the excellence of your 'Flex Diaphragm.' It is absolutely far and away the best that I have ever heard. Full-toned, rich and clear in reproducing, and will, I am certain, meet with a ready sale when known in this Dominion. It does all and more than you claim for it. Two customers who heard it only once have given me instructions to send away at once for two more. T. Lloyd, Commission Agent."

"I have given it a critical trial and must confess it is the finest production of all the sound-boxes I have used, which are seven in number. You have my hearty congratulations."

AT THE LEIPZIG FAIR.

Some Talking Machine Novelties Shown—Mechanical Instrument Trade Falls Off—Hohner and Koch Show Lines of Harmonicas.

Among the talking machine novelties shown at the International Buyers' Fair, held in Leipzig, Germany, last month, were the "Bambrinus," a life-size figure holding a wine glass and singing a drinking song, shown by E. Dienst. The Polyphon Musik Werke, of Leipzig-Wahren, exhibited some handsome models of hornless talking machines. Business at the fair this year was very fine, however, in all lines except mechanical instruments, for which there was a fair demand, though far from being up to expectations.

The chief purchasers of these instruments are the restaurant keepers and just at this time the restaurant business is under a cloud. A few weeks ago the German Government passed a grant for 500 million marks a year in new taxes. It is no exaggeration to say that the restaurant trade must account for one-third of this amount. Restaurant proprietors are therefore devoting their attention to the best method of coping with this extra burden. The public refuse to pay higher prices for beers and cigars, and the landlords can naturally not pay these high taxes out of their own pockets. It will be readily understood that under these circumstances they have little or no inclination to invest money in new expensive instruments. It is to this that the poor business at the Leipzig Fair is to be mainly attributed.

It may be mentioned that the house of Mr. Hohner, of Trossingen, had on view several styles of harmonicas ranging from the simplest and most elaborate styles.

Andreas Koch, of Trossinger, also had an elaborate showing of harmonicas of varied styles.

THE ZIMMERMANN NEEDLE CABINET.

The needle cabinet placed on the market by Jos. Zimmermann, the talking machine needle specialist of Aachen, Germany, has attracted considerable notice, not only of the talking machine trade in this country, but throughout the world. It is so conveniently and attractively arranged, providing needles for perfect, loud, medium, or soft reproductions, that the needs of purchasers are at once supplied in a manner to interest them. The Zimmermann needle cabinet is sold at a price that will interest the trade, and it is worth investigating.

MOTION TO ATTACH FOR CONTEMPT.

(Special to The Talking Machine World.)

Philadelphia, Pa., Oct. 2, 1909.

Judge McPherson, Circuit Court of the United States, eastern district of Pennsylvania, filed a show cause order in the case of the Victor Talking Machine Co., Camden, N. J., against Keen & Co., of this city, to-day, why the latter should be attached for contempt. The motion will be argued next Friday.

The World has been favored with the yearly record catalogs—formidable volumes—and the September bulletin issued by the German Gramophone Co., Berlin, Germany, also a copy of their very interesting monthly publication, "Offizielle Grammophon-Nachrichten." The records include both single and double-face discs.

REPORT SHOWING DELINQUENTS.

Secretary Roush Urges Jobbers to Send in Complete Monthly Reports—A Subject Which Is of Vital Interest to Jobbers.

J. C. Roush, secretary of the National Association of Talking Machine Jobbers, advises The World that within the next two weeks he will mail each member a complete report which will show exactly what delinquent accounts the jobber has reported in the past two years.

The purpose of this is to enable members to check up delinquent accounts showing the parties who have dropped out of business and those who have paid up their accounts and are now in good shape.

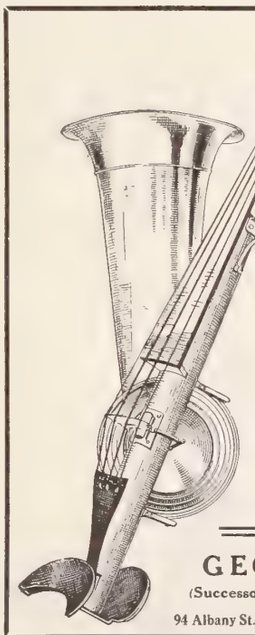
This will enable the Association to issue a complete new report showing further delinquent accounts about the middle of November.

The reason for compiling a separate sheet of this report is to reduce the amount of work and to avoid the jobber putting his blank list to one side and neglecting to go over his ledger for the past year.

Secretary Roush remarked to The World: "The credit question is one of the most vital factors in the talking machine game and it is one of the hardest questions that the jobber has to handle to-day as well as the association.

"I think this is distinctly a matter that can be settled by the Jobbers' Associaion without help from the factory and can be done only by an improved system of credit reports, and if each jobber is perfectly frank in sending in a complete and correct report monthly a great deal can be done. Several innovations in the credit reports will be given as soon as I receive the revised list."

Secretary Roush then added that he trusted that the jobbers would check up their list in order that he might have the credit report as speedily as possible.



The STROH VIOLIN

¶A new instrument possessing a VIOLIN TONE of great beauty and remarkable power, which will appeal to all music lovers.
¶The Stroh Violin being scientifically constructed will withstand the varied temperatures of the tropics, where the ordinary violin is useless.

CHEERY NEWS FROM CLEVELAND.

Improvement in General Conditions Reflected in Improved Trade with Talking Machine Men—All Look for Great Winter Trade and Are Planning Accordingly—American Sero-Phonograph Co. Move to New York—In This City, as Elsewhere, the Principal Call Is for High Priced Machines and Records—News of the Month in Detail for World Readers.

(Special to The Talking Machine World.)

Cleveland, O., Oct. 9, 1909.

General business conditions in Cleveland and vicinity have returned almost to normal, and in some lines there is a boom. Manufacturers and contractors are advertising for both skilled and unskilled help, and there are many jobs for skilled men that are not filled because the help is unattainable.

Talking machine dealers, and merchants generally, declare that people again have money to spend, not alone for necessities, but for some of the luxuries. This condition is especially pleasing to the talking machine and piano dealers, whose sales are being daily augmented.

The close of the vacation season brought an increased inquiry, and the various demonstration rooms have been echoing with music and mirth for the past month, while paterfamilias may daily be seen wending his way homeward with a goodly package of records, where, after dinner, with the family assembled, father assumes the role of entertainer, and introduces, one after another, the great singers and musicians of the day, keeping the family up until long after bedtime, because the new October records are so full of charm.

The generally expressed opinion is that trade during the fall and winter months will be unusually great, and dealers are making preparation to meet the expected increased demand, by laying in a good supply of goods, thus avoiding the irritating experience of a year ago, when they were unable to supply customers, even after long delay.

The American Sero-Phonograph Co., failing in their efforts to promote the business here, have closed their office and will ship the model machine to New York, shortly, where they expect, under the guidance of a Cleveland capitalist, to secure capital and place the machine on the market.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., had a date with the Probeck Co. to-day, the 9th inst. His visit was anticipated with pleasure.

The United States Phonograph Co., incorporated several months ago, are working on the production of a talking machine which they hope to soon place on the market.

A. A. Probeck, son of G. J. Probeck, who has for some time been in the employ of the G. J. Probeck Co., has severed his connection with the company and established himself in the automobile business, witn a partner, under the firm name of the Brown-Probeck Co.

A. H. Buescher, of W. H. Buescher & Sons, has installed a complete talking machine repair plant, and will devote himself especially to this branch of the business. A capable young man, with large experience, he will undoubtedly make a success of it.

Chas. Martin has bought the talking machine stock of M. A. Gibson, who bought the Hartwell phonograph store, and is closing out the records at 25 cents each, and the machines at "bargain prices." He says he will not continue the business.

Flesheim & Smith are pushing the Victor and Zonophone goods to the front, and report improvement in demand for both machines and records. Mr. Flesheim said the prospects were flattering for a fine holiday season's trade.

A. W. Robertson, of the Geo. J. Probeck Co., expressed himself very well pleased with present conditions and the future outlook. "The advent of cooler weather," said he, "is bringing with it the thought of indoor entertainment and an increasing demand for both Columbia double disc and Columbia indestructible cylinder records. Many inquiries are reaching us concerning the Grafonola, the new hornless machine, and judging from the many favorable comments expressed on the appearance alone, as shown in the illustrations, we expect a large sale when the stock is received. The general indications are bright for a large fall and winter business."

Mr. Towell, manager of the Eclipse Musical Co., said that the volume of business in September showed a large increase over August. "The past month," said he, "was very much better than any previous month this year, and the outlook is good, and business, judging from present indications, ought to be good during the fall and winter months."

J. H. Roach, manager of the commercial department of the Edison business phonograph, said business was now very good, showing considerable improvement. He stated that the railways were beginning to equip their offices, which would liven up the business very materially.

Collister & Sayle report present and prospective conditions very satisfactory. "We did an excellent business in both our wholesale and retail departments in September," said Manager Phil Dorn, "and so far October gives promise of big improvement. Demand is growing for the better grade of machines, and naturally for the best records, and present sales are largely for this line of goods." The company exhibit several Victrolas in the various finishes, mahogany, oak, etc., together with the Victrola XII., and they make a fine display.

Mr. Bissinger, manager of the W. J. Roberts, Jr., Co., says that "the demand has been, and still is, for the higher grade machines and cabinets. The moneyed class of citizens are becoming more and more interested in talking machines, since the highest class selections and the ornate, higher grade machines have been introduced, and are to-day among the best customers of the trade. Beside the better grade of machines, we are having a good many inquiries for Victrolas and the Victrola XII., and our record sales are fine."

Mr. Robbins, of B. L. Robbins & Co., said business has much improved during the past month.

O. RÜHL, 77 City Road, LONDON, E. C.

He stated they were making sales of the higher-grade machines and the higher-priced records, and that trade conditions were improving. October, he said, had started out most promisingly, as increasing daily sales of records, especially of the October lists, indicated. He thinks the holiday trade will be especially good.

"Trade during September was only fair. We have never found it a very good month in the talking machine line, for some reason," said I. H. Buescher, of Buescher & Sons. "Thus far this month we have made sales of a number of high-priced machines, including Victrolas and the Victrola XII. Record sales are good and increasing. We anticipate a big holiday demand, and I would advise all dealers to lay in a good stock now for that trade, and not get caught as we all were a year ago, and unable to meet the wants of our customers."

The Bailey Co., in their new quarters, report business improving in both the talking machine and piano departments. "There is a growing demand and our sales of the better grade machines is increasing," said Mr. Freidlander. "Our individual demonstration rooms are a success and proving to be trade winners. The October lists of records are fine and are selling well." The company had a formal grand opening of their enlarged store October 6-8. At the regular employes' monthly meeting Mr. Friedlander is to read a paper on "The Invention and Development of the Talking Machine," a subject which he is capable of handling with ability.

Ernest R. Ball, former Clevelander and composer of "Love Me and the World Is Mine," and other ballads, demonstrated some of his songs in the music department of the Bailey Co. last week.

Conditions at The Talking Machine Store are very satisfactory. Mr. Denslow, manager, said: "With the additional special list of Amberol records an impetus has been given to the record business. I have had more inquiries in the past two weeks for machines and cabinets than in a long time. Many of the inquiries indicate a good holiday trade." One of his Victor window displays is attracting the attention of every passerby in the Arcade, and is much admired.

H. L. Tinker, manager of the talking machine department of the May Co., said: "There is a decided improvement in the record line, especially since the first of the month. Machines, especially Victrolas, are in fairly good demand, as are also cabinets. We have secured the exclusive department store right in Cleveland for the sale of Schram Bros.' line of record cabinets." The company have a large and fine piano and talking machine window display on their Prospect avenue frontage.

John Reiling, of the West Side Columbia store, carries a pretty complete stock of the foreign records, and there is a good demand for German, Hungarian and Hebrew records. The call for machines is fair, and prospects look good for a fine fall and winter trade. "I am having a very good run of business in the repair line."

Mr. Goodman, of the Goodman Piano Co., says that business is improving and he looks for a good holiday trade. The company have been appointed jobbers for the Herzog Cabinet Co.; also for the Regina line.

OFFICIALLY ANNOUNCED.

Sales Manager Dolbeer Sends Out Circular to Jobbers Regarding the National Co.'s Latest Concealed Horn Creation "The Amberola."

On September 24, F. K. Dolbeer, sales manager of the National Phonograph Co., Orange, N. J., issued the following preliminary announcement regarding the Edison "Amberola" cabinet, which was sent their jobbers:

"To Edison Jobbers—On or about December 1, 1909, we will place on sale the Edison 'Amberola,' a distinctively new-type concealed-horn phonograph, specially designed to appeal to a discriminating portion of the public, who have been demanding a high-grade machine for home use, combining a perfected musical instrument with a highly artistic and useful record cabinet.

"Cabinet.—Mahogany (piano finish) or mission oak. Mounted on patent roller castings; is beautifully finished, and has four drawers, equipped with special clamps in bottom, holding a total of one hundred and twenty standard or Amberol records, in original cartons. Dimensions—Height, 49 inches; width, 21 inches; depth, 22 inches.

"Machine Features.—Equipped with traveling mandrel and has stationary, new-style diaphragm reproducer. It also has an automatic stop, and a combination starting lever and reproducer lift. By lifting this lever the feed nut is released, and sapphire raised for return of the mandrel and removal of record. When lever is pressed down the sapphire is lowered to a contact with the record, and the motor is also started. Improved type motor. Price—List price, $200.

"For your information we are sending photographs of the 'Amberola' by this mail, under separate cover, which you are at liberty to show the retail dealers, giving them all information contained herein, and book their orders for shipment when received, or on a given date authorized by us. We highly recommend, and urgently request, that you call the attention of dealers to this new-type machine at once; pointing out the large margin of profit obtained from the sale of such an outfit, and the advantages gained by carrying at least a sample at all times, for exhibition and sale purposes, and if possible you should secure their advance orders, so that you will be in position to place an intelligent order to meet the requirements of your trade, immediately formal announcement, with full and complete information, is received, thus giving our manufacturing department ample time to prepare for the needs of the entire trade.

"An Amberol list of grand opera records, made by high-class talent, will be issued at about the same time the cabinet machine is introduced."

The man who advertises under protest never makes a success of his advertising.

WHEREVER there is a talking machine there are wanted perfect loud, medium, or soft reproductions.

Wherever there is a talking machine there are ladies, and where there are ladies, are needed sewing needles and pins.

EXECUTIVE COMMITTEE MEET.

Governing Body of National Association of Talking Machine Jobbers Hold Session in Pittsburg on September 19—Those Present—Decide Upon Atlantic City as Next Meeting Place of Association—Committees Appointed—G. D. Ornstein Entertains.

A meeting of the Executive Committee of the National Association of Talking Machine Jobbers was held at the salesroom of the Standard Talking Machine Co., Pittsburg, Pa., on September 19, at 10 o'clock, President Perry B. Whitsit presiding. The meeting was well attended and much interest was manifested in the subjects brought up for discussion. The following were in attendance: Perry B. Whitsit, president of the Perry B. Whitsit Co., Columbus, O.; J. Newcomb Blackman, president of the Blackman Talking Machine Co., New York; Louis Buehn, of Louis Buehn & Bro., Philadelphia, Pa.; J. C. Roush, of the Standard Talking Machine Co., Pittsburg, Pa.; J. F. Bowers, of Lyons & Healy, Chicago, Ill.; E. F. Taft, manager of the Eastern Talking Machine Co., Boston, Mass., and H. H. Blish, of Harger & Blish, Dubuque, Ia. In addition to the above members of the Executive Committee the following were in attendance: F. W. Davidson, vice-president of the Perry B. Whitsit Co.; T. H. Towell, manager of the Eclipse Musical Co., Cleveland, O., and George D. Ornstein, manager of the traveling department of the Victor Talking Machine Co.

The meeting was devoted chiefly to the general routine of business, though a number of matters of direct interest to the association were discussed by those present.

One of the most important matters was the choice of a meeting place for next year. Mr. Whitsit, the former secretary, presented his report, which showed 59 votes for Atlantic City, as against 19 for Detroit and 13 for Portland, Ore. The votes for Atlantic City, from jobbers west of Pittsburg, exceeded in number those for the two other cities combined. This was taken as an indication that the inland jobbers preferred the seashore for their convention.

In view of the vote Atlantic City was chosen as the next convention city, the meetings to be held at the Chalfonte on July 5, 6 and 7. The idea in selecting the above dates as noted is to enable members and delegates who may attend to have the benefit of July 3d and the 4th to travel, thus allowing a five days' outing.

J. C. Roush, secretary of the association, was appointed chairman of the committee of arrangements for the Atlantic City convention, and there is no doubt he will do the honors to perfection. He will announce the other members of his committee later.

The following committees were appointed for the ensuing year by President Whitsit:

Resolution Committee—Louis Buehn, chairman; Rudolph Wurlitzer and Lawrence McGreal.

Press Committee—J. Newcomb Blackman, chairman; L. C. Wiswell, B. G. Pierce, B. L. Crew, A. J. McCarthy and E. F. Taft.

Grievance Committee—E. F. Taft, chairman; J. F. Bowers and H. H. Blish.

Membership Committee—J. C. Roush, chairman. Other members of this committee will be announced later.

At the close of the session George D. Ornstein gave a very interesting talk on trade problems, following which the Executive Committee were the guests of Mr. Ornstein at a dinner served at the Fort Pitt Hotel, which was greatly enjoyed by all in attendance. After dinner the members left for their respective homes, embued with the desire to work harder than ever in the interests of the association, which has already accomplished so much good.

HOFFAY DUE IN NEW YORK.

Jose Hoffay, formerly manager of the Columbia Phonograph Co.'s store, Mexico City, Mexico, is due in New York at an early date and will be connected with the foreign department.

GREAT TRANSCRIBING CONTEST

In Connection with the Exhibit of the Edison Business Phonograph Co. at the Business Show—Miss Anna D. Day Won First Prize—Value of Business Phonograph Proven.

The Edison Business Phonograph Co., Orange, N. J., had a very complete exhibit of their latest type machines at the National Business Men's Show, which was open from Sept. 25 to Oct. 1, inclusive, in the Madison Square Garden, New York. The display was under the immediate charge of N. C. Durand, sales manager of the company, with a competent corps of expert assistants. The space occupied by the company was in the center of the main floor, and the

MISS ANNA D. DAY, WINNER OF THE FIRST PRIZE.

exhibit attracted a great deal of attention. Their booklet, entitled the "A B C of the Edison Business Phonograph: A, The Phonograph; B, The Dictator; C, The Stenographer," was distributed to all enquirers and visitors, who were greatly interested in its contents.

As is well known the Edison company have been very active in the business phonograph end, having paid attention not only to office

GOLD MEDAL PRESENTED TO MISS DAY.

use, but to the training of school children in the use of the machine in schools, thus creating a lasting impression in the minds of the coming generation that the business phonograph is here to stay as a time eliminator.

An incident of marked importance during the show was a transcribing contest, and the winner of the Edison gold medal on Sept. 29, was Anna D. Day, of 158 West Sixty-first street, New York, who wrote 43 3/10 words per minute (after deductions for all errors), on an Underwood typewriter. The dictation from which this transcribing was done was at the rate of 150 words per minute. Bertha Lange, of 304 Arlington avenue, Jersey City, N. J., was second, winning the silver medal, with a record of 40 7/10 words per minute (after deduction for errors), on an Oliver typewriter. Anna McManus, of 2107 Fifth avenue, New York, was third, winning the bronze medal, with a record of 37 2/10 words per minute (after deduction for all errors), on a Remington typewriter.

The remarkable part of this performance was the freedom from errors in transcribing, showing the perfection of the modern Edison business phonograph, the winner being penalized for only 3 per cent. of errors in writing the total of 523 words in the ten minutes of the contest. When it is considered that the ordinary dictator does not attain near the speed of 150 words per minute, at which the dictation was put on the phonograph for transcribing, it can easily be seen the proportion of time that any business man can save in giving his dictation to the machine, to say nothing of the convenience of never having to wait.

The Edison transcriber has the great advantage of being able to write from the phonograph fully 50 per cent. faster than she could write from stenographic notes with greater convenience and less mental effort. The fact that she does not have to take stenographic notes easily saves half of her time, and thus she is employed constantly in productive letter writing.

The modern Edison business phonograph has been so perfected that all of this is possible. The motors are of the Universal type that operate on any electrical current, either direct or alternating, and the dictator has the advantage of making corrections or additions to his dictation at any time, so that there is no penalty for adopting this modern secretary. With the aluminum hearing tubes of very lightest pattern and the loud, clear reproduction of the dictator's voice the stenographer now finds it more easy and pleasant to typewrite from the phonograph than from her shorthand notes.

The contest was in charge of Professor J. N. Kimball, 1358 Broadway, New York, and a competent set of judges which were selected from the International typewriting contest, under which rules all of the deductions and the judging was done.

EFFECTIVE COLUMBIA WINDOW.

M. Silverstein, manager of the Silverstein Co.'s store in Louisville, Ky., has been heartily congratulated on the very effective window which he has arranged in connection with Horse Show Week in that city. The window shows a drawing room, completely furnished to the minutest detail with every modern fixture. The principal feature of the window is the presence of the home circle of the Columbia graphophone. The figures of a man, woman and two children are excellently arranged and well dressed, and the idea is that they are enjoying the graphophone after their return from a visit to the Horse Show. Fine furniture and rugs add to the attractiveness of the display. It is conceded to be one of the best windows seen in Louisville in many a day.

QUAKER CITY "DOINGS."

Marked Recovery in Trade—Buehn's Report—Penn Co. and the Amberola—Columbia Co. in Old Home—Wanamaker Broadening Out—Heppe's "Talker" Plans—Weymann's Business Is Growing in All Directions—Interesting Resume of Situation.

(Special to The Talking Machine World.)
Philadelphia, Pa., Oct. 11, 1909.

The great popularity of the talking machine is well illustrated in the advance that has marked the business in that instrument during the past few months. In no line of the trade has the recovery been so rapid and so substantial. The talking machine business in Philadelphia to-day is larger than it has been at any time since the invention of that instrument, and this is to be accounted for in the aggressiveness of the manufacturers, who are always giving the public something new. Long ago it was thought that the apex had been reached, but every month brings with it new innovations, which are readily taken up by the public, who have come to look upon this instrument, not only as one of the prime means of entertainment in the home, but as an educator and as a cultivator of the dormant talent in music, such as is accomplished in no other way.

A firm enjoying one of the largest wholesale businesses in this city is that of Louis Buehn & Brother, 45 North Ninth street. Recently this firm added to its already spacious warerooms, several new sound-proof rooms in which to handle the many customers always to be found in their store. In speaking with a member of the firm, he summed up the situation thus: "Business has improved materially. We have been running ahead since April of this year. April, May, June and July showed an increase in sales of about 25 per cent. August was about one-third ahead, and our September business was almost double that of last year. From present indications I cannot help but feel that we are going to have a very good fall and winter." R. J. Dungan is at present representing the firm through Pennsylvania and is sending in some very good orders, and Frank Reinick is doing very well among the local trade. He is also covering South Jersey. Business on the road has been fairly good all summer. The firm have now two hear rooms each for the Victor and the Edison talking machines.

The Penn Phonograph Co., at 17 South Ninth street, in both their retail and wholesale departments have found business picking up right along, and of late very rapidly. It has shown a marked increase during the past few weeks, and they have been getting in a very heavy stock to handle it. T. W. Barnhill, the manager of the company, is at present on the road, visiting the firm's trade in the South. Edward Smullen is on a business trip this week through the coal regions of the State, and reports that he finds conditions in that section as very much more favorable than they have been during the past two years.

The firm are showing at present the Edison Amberola, a new Edison machine, which they retail for $200, and on these instruments they expect to have a very heavy fall and winter trade, and are expecting a very large shipment in the course of a few days.

The Columbia Phonograph Co. have gotten back into their old home and have it fixed up much more attractively than before their fire last spring. They were very much handicapped by having to move around on Twelfth street until their warerooms were repaired, but are gradually getting their former trade back to the store again. Not only have they improved window facilities, but they have their walls tastefully decorated, and have large green rugs on the floor.

The Columbia Co. are very much pleased with their new Grafonola de Luxe, an instrument which they believe is going to be very popular with the public; they received four of them as a first shipment a few days ago, and before 11 o'clock had three of them and one Regent sold. In their new store they have five sound-proof exhibition rooms.

Thomas K. Henderson, who took charge of the business last month, succeeding John A. Goldrup, who has gone with the Ellsworth Co., is making splendid headway. They have just placed a new representative on the road, Robert Robinson, who will cover the eastern part of Pennsylvania for the firm. They are expecting to have in stock shortly a new $100 instrument, built on the order of the upper half of the Grafonola de Luxe. They consider that the outlook is very bright for all styles of graphophones. A new feature soon will be four-minute records, which they are sure will be popular with the public.

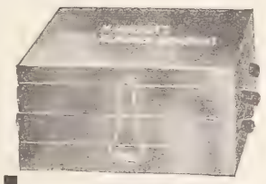
The extensive talking machine department at Wanamaker's is showing considerably more than the usual activity these days. They are making arrangements for an extensive campaign for fall trade, and expect, in the future, to do a larger wholesale business than before, and will shortly start in to reach that line of the trade. Mr. Gerson, the manager, who has also charge of the New York Wanamaker department, spends three days a week in Philadelphia and three in New York. He thinks that conditions look very promising for the future. They are getting out a number of new cabinets, to be used for the purpose of holding the "Echo" Record Albums. These albums are patented by Mr. Gerson, and they form a complete system for filing disc records, which can be added to album by album.

The Wanamaker talking machine department believe that they will be very successful with their wholesale department, for the reason that they are in a position to insure very prompt delivery on either the Victor or the Edison lines. They have a free delivery suburban service, which is quite an advantage. When the new Wanamaker building is completed, not only the piano department, but also the talking machine department and other parts of the musical business of the Wanamaker establishment, will be given ample room, and although it has not been decided, there is some talk of devoting the entire second floor of the big store, which covers the space from Market to Chestnut, and Thirteenth to Juniper streets, over to the music department. Every individual department will be given its own individual space, so that none will conflict with the other and prevent harmony and pleasing artistic effects, and it will be the largest music store on any one floor in the world.

With the Heppes entirely rebuilding their new store, 1119 Chestnut street, they have as yet not entirely laid out the plans for the talking machine department in the new building, but the business has been growing so rapidly that in the very near future they will have to give it twice the space it occupies at present. Until this new building is done, they are having an additional "hearing" room built in No. 1117, upon which the carpenters are now at work. The entire department will be removed into the new quarters, and the first floor will be devoted to the talking machine business exclusively.

H. A. Weymann & Sons have one of the best locations for the talking machine business in Philadelphia, and the advantage of having so many other departments connected with the store that it is not necessary for them to exert themselves much to bring trade. Sheet music musical instruments of all characters, talking machines, pianos, players, etc., and you can find at the Weymann store everything in the line of musical instruments made. They have been doing an exceptionally fine business all summer and fall, and it looks as if it was going to be the largest year in business they have ever enjoyed. There may be an exception to 1907, but it is almost double what it was last year. They have three men on the road at present, and their wholesale business is showing a great improvement. They have just fitted up a Victrola room with appropriate pictures, settees, easy chairs, and it is one of the most attractive in the city. They are doing particularly well with the Edison Cygnet machines, which they first placed on sale on the first of October.

Have You Seen the New C-D-C Device?



No. 400, Closed

It is really the greatest Harmonica selling proposition ever put before the dealer.

The C-D-C DEVICE consists of a three tray cabinet of the best seasoned wood, beautifully finished in a dark mahogany piano polish, and when closed resembles an elaborate jewel case. Owing to its novel arrangement and peculiar construction, it can be thrown open and closed in a moment's time. When the Cabinet is open the Harmonica display is exceptionally attractive, exhibiting its entire contents of 38 Harmonicas at one time, and showing the instruments to a great advantage. When closed, the complete Cabinet occupies a minimum of space (10¾ in. wide, 9¼ in. long, 5¾ ins. high), being much less than a foot square. Thus, it will be seen what an ideal self-selling proposition this new Collapsible Display Cabinet is. The Cabinet costs you nothing, and besides you are the gainer by over 50 PER CENT. cash profit on your investment. The C-D-C DEVICE contains 38 pieces of the very best selling

Hohner Harmonicas

assorted in 16 different styles, all keys, and can be retailed at the following prices:

Assorted Harmonicas

16 pieces to retail at 25c. - -	$4.00

EXPANSION IN BOSTON.

In the Form of Increased Business and New Stores—High Priced Machines of All Makes in Demand—Grand Opera Plans Help in This Connection—Trade News from Classic City.

(Special to The Talking Machine World.)

Boston, Mass., Oct. 10, 1909.

Two stores that have put in new lines of talking machines seem to act as a sort of criterion for business conditions here just now, as every other talking machine store follows their example in reporting business as "bully."

The Victor XII and the Victrola, the Edison Amberola and the Columbia library table style and the Graphonola de Luxe lead the local trade so far as the features are concerned, and grand opera records have the call in that department. The opening of the Boston grand opera season is now only three weeks away, and as all the artists are here rehearsing, they make almost daily calls at the different stores where some of them have been given added fame through the medium of records of their voices.

For example, Alice Nielson spent half a day in one of the local stores this week, listening to records of her voice and expressed herself as greatly pleased with the results.

Victrola sales at the Eastern Talking Machine Co. are reported as largely on the increase. It is planned at this store to have a larger department for the display of Victrolas. The Eastern Talking Machine Co.'s store association is to have another meeting on the third Thursday of this month, a feature of which will be a dinner in honor of General Manager Taft.

The talking machine department at the big Henry Siegel store, which has been opened only a few weeks, is doing a most satisfactory business under Manager C. B. Thompson. This department handles Columbia discs and the Indestructible records.

Another store handling the Columbia exclusively is that of Jerome H. Remick & Co., and business there has increased greatly in the past month.

Manager Howes, of the Houghton & Dutton Co.'s talking machine department, reported this week that he had just placed the largest wholesale order that he had given for over a year. He says that business is progressing better than was anticipated and that the announcement of the immediate return of Harry Lauder to Boston has caused a jump in the records of his songs.

Manager Winkelman, of the Oliver Ditson Co., jobbers and retailers in Victor goods exclusively, is having a most gratifying demand from the wealthy and artistic people of Boston for the Victrolas, and when they buy one they usually give a big order for grand opera records. The retail sales of disc records have grown wonderfully during the past year, due in great measure to the liberal advertising done by the Ditson Co.

At the C. E. Osgood Co., they are beginning to realize the fine qualities of the Victrolas, for a number of sales of these instruments lately have convinced the firm that it pays to cater to the highest class of people almost exclusively. The new Edison Amberola promises to be a big thing at this store, judging by the number of inquiries made for it.

E. D. Easton, president of the Columbia Phonograph Co., was a visitor to the local store last week. The Columbia Co. have just increased their local output through the opening of two new stores in the suburbs, one at South Boston, by Henry Schultz, and another in Davis Square, Somerville, conducted by The Collins Talking Machine Co. Business has started in there very well indeed.

Advertising Manager Brown, of the Victor Co., was also a local trade visitor last week.

Mr. Pike, who was burned out a short time ago, has not as yet found a location to suit him. He says that if he can get a good location in the central part of the city, he will open up a mammoth store, the largest in the city. Good locations are scarce, however.

REGARDING "SPECIAL" RECORDS.

The National Phonograph Co. Issue Some Important Data Bearing on This Subject—Some Delay in Shipping Cygnet Horns to Trade.

The appended recent circulars have been sent the trade by F. K. Dolbeer, general manager of sales of the National Phonograph Co., Orange, N. J. The first bears the date of October 4, regarding "special" records, as follows:

"To Edison Jobbers:—For the purpose of placing 'special' records upon the market that are already big hits, or that we have reason to believe will be especially popular, at the very earliest possible date, we have decided to inaugurate the following plan: From time to time, as such selections appear (the masters for which have already been made with a view of listing the records two or three months hence), we will advance the selling date one month, making shipment of these records with the previous month's issue, provided you will favor us with a standing order for a stated number of such records.

"For the present not more than four 'special' records will be issued at any one time, nor will those special records increase the regular lists, as they will simply be advanced as to selling date, and will appear in the regular monthly list, as an example, if one or more numbers were being prepared at the present time with a view of listing them in the January, 1910, supplement, which, under the present system, would be placed on sale December 24, we would ship these 'special' records with your December order, and you could place them on sale with your December records, on November 24. These numbers will again appear upon the regular monthly bulletin and supplements. This plan will not increase the present total of forty selections for each month, nor will it permit of our furnishing samples of these special records. Special printed matter will be prepared and forwarded with the goods, thus enabling you to intelligently place the records before your trade."

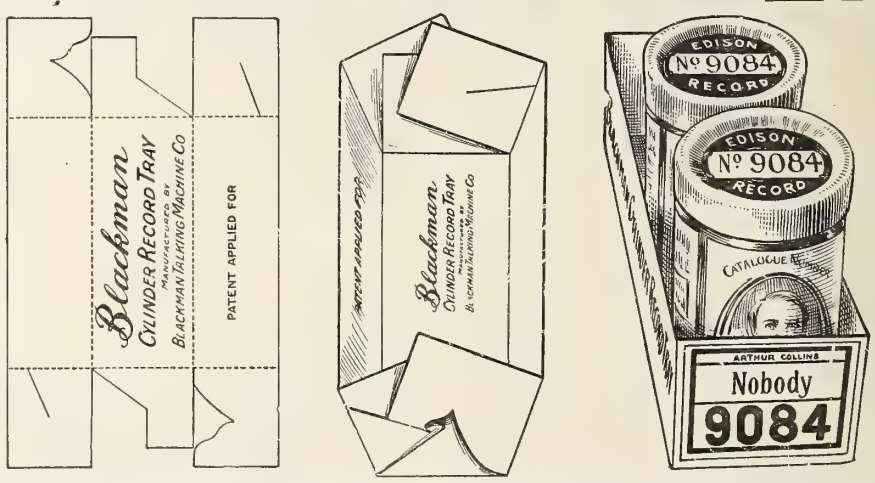
On the 6th, following, the appended was mailed:

"Owing to the numerous orders we have received from the trade for Cygnet horn equipments, and due to the fact that the horn manufacturers have not been able to supply us with our requirements, it becomes necessary to state that some of these orders will necessarily be delayed, and we must ask your indulgence for a period of at least another ten days."

Talking machine salesmen who handle the Victor Red Seal records made by Mlle. Gerville-Réache, the celebrated contralto of the Manhattan Opera House, sometimes find difficulty in pronouncing her name. As a matter of information and in response to several inquiries, we wish to state that her name is pronounced *Ray-ash.*

IMPROVE YOUR SYSTEM
AND
INCREASE YOUR RECORD SALES
BY USING
THE BLACKMAN CYLINDER RECORD TRAY
(Patent Applied for)

A Record Tray With Record Label for Less Than One Cent



The BLACKMAN Folding Trays for Cylinder Records are shipped FLAT and can be FOLDED into STRONG TRAYS in a few seconds, as shown above. This tray, with Rapke Label, makes a handsome looking record stock and a system you can't beat. The labels act as Silent Record Salesman and the customer can point to the record he wants to hear. Adopt this system and your sales will not only increase but it will never take more than a few minutes to make up a Record order.

THE BLACKMAN FOLDING TRAY USED IN THE SYRACUSE WIRE RACKS
enables you to carry a large stock in a small space, and also use the Rapke Label. We furnish wire racks at regular prices, either wall or revolving style, with opening to accommodate Blackman Trays. Write for prices.

LEO SLEZAK MAKES RECORDS IN LONDON

For the National Phonograph Co.—The Distinguished Austra-Germanic Tenor Photographed in the Act of Making Ten Grand Opera Records Which Will Be Placed Upon the Market by the National Phonograph Co. December 1.

We present herewith a photograph of the recording studio of the National Phonograph Co., in London, and the man standing, collarless, before the recording horn is Leo Slezak, the celebrated tenor of the Royal Opera House at Vienna, who will make cylinder records exclusively for the National Co. The photograph was taken while Slezak was filling an engagement at Covent Garden, during which period he made ten records, which will be placed upon the market about December 1.

SLEZAK RECORDING IN LONDON FOR THE NATIONAL PHONOGRAPH CO.

As may be judged from the picture, Slezak is a man of tremendous stature, standing about six feet five inches, and is built in proportion. His magnificent physique especially fits him for the romantic roles in which he has been so successful. Slezak possesses a most attractive personality and is equipped with a broad and liberal education, as was found by President Frank L. Dyer of the National Phonograph Co., who spent several days in his villa at Cauterets in the Pyrenees on the occasion of his recent European trip. Mr. Slezak will make his first American appearance at the Metropolitan Opera House, New York, during the present season.

Slezak has toured all the principal European cities with tremendous success, and is a great favorite in Berlin and London. He is a prominent figure in the social and intellectual life of the Austrian capital. Slezak's noble voice is produced with unmatched ease, and with a flexibility that cannot fail to command admiration, and which proves him to be a master in all the arts and graces of the Italian school. He is no less successful in the strenuous roles of the Wagnerian operas.

The records that he has made for the National Phonograph Co. represent his favorite numbers those in the rendition of which he best displays the quality and range of his phenomenal voice and in which his success has been the most pronounced. The selections are taken from "Tannhauser," "Lohengrin," "Othello," "La Boheme," "Gli Ugnotti," "Tosca," and "Aida," and the special care given to the recording of these numbers has resulted in ten of the most desirable grand opera records that have ever been submitted for the approval of the music-loving public.

SALESMAN WANTED.

Wanted.—Salesman for Iowa; one acquainted with the talking machine business; Edison and Victor preferred; good position for right man. State experience, with references. Address, Harger & Blish, Edison and Victor Jobbers, Dubuque, Iowa.

EXPERIENCED REPAIR MAN WANTED.

Wanted.—Thoroughly experienced repair man. Communicate at once with the Standard Talking Machine Co., Pittsburg, Pa.

BUSINESS FOR SALE.

Victor and Edison Phonograph Business For Sale.—Established 5 years in choice residential section of New York city; all salable goods; no cut-out records; mailing list 1,000; facilities for serving four customers at once. Parties wanting to do business here please reply. Job lot buyers keep off; good reason for selling. "Value," Talking Machine World, No. 1 Madison avenue.

SALESMAN WANTED.

Wanted.—First-class Victor, Edison, small musical instrument and sheet music man to sell to dealers; good position for good man. Address, Ross P. Curtice Co., Lincoln, Neb.

WAS THE JOKE ON MR. PELZER?

The Edison building, 10 Fifth avenue, New York, was brilliantly illuminated during the week of the chief events of the Hudson-Fulton ceremonies, and the signs, installed under the supervision of Wm. Pelzer, vice-president of the National Phonograph Co., may be permanently retained, but reproduced in more substantial form. These electric signs consist of the company's trade-mark, the name of the distinguished inventor, "Thomas A. Edison," written the full width of the building; below it on the third and second floors respectively the words "Phonographs" and "Moving Pictures."

When the current was turned on the building presented a striking appearance, visible for a distance up and down the avenue, coming in for appreciative attention and applause on the part of the marchers, especially while the carnival parade was passing during the evening of Oct. 2. In connection with this illumination quite a good story is told on himself by Mr. Pelzer. The evening the lights were being tested for the first time the avenue was crowded and as Mr. Pelzer was on the sidewalk in front of the building to observe the effect, as the current was switched on and the words "Phonographs" and "Moving Pictures" flashed out in the night, a universal "Ah! Ah!" went up from the interested spectators, and several shouted: "Is the show going to begin?" Mr. Pelzer laughed immoderately when he heard this exclamation and got inside as soon as possible to escape too close a scrutiny.

Dr. Cook Makes A Victor Record

The Discoverer of the North Pole Makes a Remarkably Interesting Record in Which He Tells the American People Through the Victor Record of His Thrilling Dash to the Pole—The Culmination of Three Centuries of Effort.

Another proof of the wonderful enterprise of the Victor Talking Machine Co. is the announcement that they have induced Dr. Frederick A. Cook to describe on a twelve-inch Victor record "How I reached the North Pole." In an intensely interesting four-minute talk, Dr. Cook gives the important particulars of his arduous and thrilling journey. The simple and modest manner in which this great explorer has described his struggles amid the Arctic waters with starvation and death ever near, makes the record singularly impressive and convincing.

The advantages and value of such a record to the talking machine trade all over America is obvious, and the Victor Co. are to be congratulated on their progressiveness.

The wide possibilities in the way of sales are apparent, in view of the fact that Dr. Cook is traveling throughout the country on a lecture tour, for which he is receiving from $3,000 to $10,000 a lecture, and this will unquestionably insure a large demand for this record. It certainly offers a great advertising opportunity for Victor dealers.

In his letter to the trade, L. F. Geissler, general manager of the Victor Co., says:

"No event in years has produced greater excitement or caused more newspaper comment than the discovery of the North Pole and the fact that we have been able to secure this record almost immediately after Dr. Cook's return to this country should be brought to the attention of every Victor owner. In fact, you should endeavor to get all the people of your town to your store to hear this Dr. Cook record, as it will be the means of interesting many people in the Victor.

"The immense popularity and vogue of Dr. Cook makes it desirable that the sale of this record will not be restricted to any specified opening date, but may be placed on sale as soon as you receive them.

"In order to participate in the first schedule of shipments, Denver distributors and all distributors west of Denver should wire in their first order (using code). Distributors east of Denver should mail their orders to us within 24 hours after receipt of this notice. We will then arrange to ship all orders of this record to distributors in the same city simultaneously."

Dr. Cook's record is listed as No. 31755 and sells for $1.00.

The P. A. Powers Co. have transferred their activities from New York City to Wakefield, N. Y., where they have established a motion picture studio.

Paul H. Cromelin, vice-president of the Columbia Phonograph Co., left on Monday last for a fortnight's vacation.

MISS STEVENS' SHOCKING DEATH.

Only Daughter of Walter Stevens Killed in Collision of Boats at River Parade Held During Hudson-Fulton Celebration.

One and the only accident that marred the current festivities attendant upon the Hudson-Fulton celebrations was the shocking death on September 25 of Miss Frances L. Stevens, the daughter and only child of Walter Stevens, manager of the export department of the National Phonograph Co., Orange, N. J. Miss Stevens was aboard a ferryboat of the Lackawanna Railroad when it came into collision with the United States revenue cutter "Seneca." The prow of the "Seneca" rammed into the lower deck of the ferryboat, where the young lady was sitting with Mr. and Mrs. F. K. Dolbeer and their two daughters, when Miss Stevens was crushed, her death being instantaneous. Edna Dolbeer had an arm broken, and she was taken to St. Mary's Hospital in Hoboken for treatment, from which she has since returned to her home in Orange. Ruth, her sister, miraculously escaped with a few scratches but all suffered severely from shock.

The death of Miss Stevens naturally cast a gloom over the assembled guests at the New York offices of the National Co., 10 Fifth avenue, gathered to view the magnificent land parade in connection with the Hudson-Fulton affair, and everybody expressed their sympathy for the irreparable loss of Walter Stevens and his wife, who were absent, of course, on this occasion.

GEO. W. LYLE ON EXTENDED TRIP.

George W. Lyle, general manager of the Columbia Phonograph Co., General, started from New York October 1 on an extended tour of inspection of the Columbia stores throughout the country. He will go to the Pacific and visit the South and East, and is expected to be away about six weeks. Before going away Mr. Lyle said conditions so far as the Columbia business was concerned was very satisfactory and that trade would improve right along.

MAGAZINES WILL REVIEW RECORDS.

The National Magazine and The World of To-Day Will Start a New Department for This Purpose with the November Numbers—This Radical Step is Due to the Labors of Geo. P. Metzger, Who Has Been Developing the Plan For Over a Year.

The National Magazine and The World of To-Day, will, beginning with the November numbers, inaugurate a very important department—one that will be of extreme interest to dealers in talking machines throughout the United States. This will take the form of a careful review of the records of the month, as issued by the various companies manufacturing talking machine records.

This plan of devoting space to an interesting review of talking-machine records has been in vogue in England for some time past, our English contemporaries believing that this was a most direct form of news, and as interesting as the department devoted to books.

It is a pleasure to The Review to note that the magazines in this country are commencing to recognize the important position which the talking machine and the talking-machine record occupies in the homes of our people. That the two well-known American magazines referred to have taken this important step is entirely due to the earnest work of Geo. P. Metzger, advertising manager of the Columbia Phonograph Co., who has been developing this matter for over a year, and whose contention right along has been that for every interested reader of the book reviews which some magazines print there are certainly a dozen interested readers of reviews of the monthly records.

Mr. Metzger's arguments when placed before the National Magazine impressed them so forcefully that Mr. Chapple, of that publication, called upon the various manufacturers of records, who have agreed to co-operate with him. When Mr. Metzger was seen regarding the foregoing move he said:

"The number of people who regularly read the monthly supplements of the various companies, is far above the million mark. This is an immense clientele, and the magazines at last are appreciating it as I knew they would. If the magazines go at it right and make their reviews independent—as at least the National Magazine intends to do—these reviews will prove to be of benefit to the advertiser, of course, and also of unmistakable interest to the reader. I look for the time to come when every magazine and newspaper which pretends to keep its columns timely and interesting will have a wholly independent review of the musical records each month."—The Music Trade Review.

HOHNER COLLAPSIBLE DISPLAY CABINET.

The wide interest awakened by the introduction of the new Hohner collapsible display cabinet, illustrated and described in the advertisement of M. Hohner, 475 Broadway, New York, is extremely gratifying to the originators of this novelty. Inquiries for it have come from all parts of the world, and the factories at Trossingen, Germany, are being so crowded with orders that it is possible a congestion may follow, though the working force has been increased and the great plants are running overtime to meet this extraordinary demand promptly. The folders descriptive of the "C-D-C" device are now being distributed, and dealers will be supplied through the jobbers in the event they have been overlooked. The cabinet contains 38 pieces of the very best selling Hohner harmonicas, assorted in 16 different styles, all keys—all quick sellers.

The New Jersey Patent Co. and the National Phonograph Co. filed a bill in equity in the United States circuit court, Pittsburg, Pa., against H. E. Crandall and J. W. Jamison, who, it is alleged, have been selling Edison phonograph records at cut rates, in disregard of an agreement.

Approximately 400 new dealers have recently taken on the Columbia lines. This is going some.

GET THE BEST NEEDLES MADE

The finest tones can be secured from talking machines through the mediumship of ROYAL CROWN NEEDLES

These needles are made from the finest Sheffield Steel finely tempered and polished. They will not scratch. Each needle is perfect, the points being rounded by a secret process.

THEY ARE SUPERIOR TO ANY OTHER ON THE MARKET

The Royal Crown Needles are packed in patented boxes containing three hundred, four hundred, five hundred, eight hundred and one thousand needles to the box, also in folding boxes containing one hundred, two hundred and three hundred needles to the box. They are manufactured in the various tones, soft, medium, standard and loud.

Write to-day for descriptive circular. If your Jobber cannot supply you, write direct to us.

Showing a fac-simile of the patented box ready for use. Always printed this way

You cannot lose a needle when closed

IMPORTANT PRICE-CUTTING DECISION

The Victor Co. Secure Another Victory in Their Campaign Against Dealers Who Indulge in This Practice—New Phase of the Question Introduced by the Judge Imposing a Fine of $200 as Well as Costs in the Suit of the Victor Co. Against the Futernik Co., of Philadelphia—The Judge's Decision Well Worth Careful Reading as It Marks a Precedent Which Dealers in the Talking Machine Trade Would do Well to Ponder Over.

From the numerous suits brought by the Victor Talking Machine Co., as well as by other manufacturers of machines and records—the "big three," to be specific—it will be noted that the United States courts have invariably granted restraining orders enjoining dealers from selling goods at less than the prices prescribed in the qualifying contract. Now, the courts have gone a step farther, and are imposing fines for violations of the factories' agreements as tantamount to an infringement of patent rights. In other words, it is high time the talking machine dealers throughout the country realize that the factories are after price cutters to a finish, and that in the future it will probably not suffice for them simply to be eliminated from the list and supplies cut off. But, as is made clear in the proceedings reported below, this case is probably only a forerunner of the method of damage assessment that will be employed in all cases possible, and that it is well that the factories see that such troublesome and dishonorable concerns are eliminated from the ranks just as rapidly as can be done.

The suit in point is that of the Victor Talking Machine Co., Camden, N. J., against the Keen Co. (Futernik Co., successors), Philadelphia, Pa., and in speaking of it, Horace Pettit, general counsel of the complainants, said:

"I am pleased to state that Judge McPherson to-day (October 11), filed an order in the Keen contempt proceedings holding The Futernik Co. guilty of contempt in selling records at a less price than the license price, being in violation of the order of the court of November 5, 1906, in our suit against The Keen Co., of which The Futernik Co. is the successor. I would say that the judge has fined the company $200, to be paid to the Victor Co., and also held them in costs. I am rather pleased to secure this decision, especially as the defendant filed numerous affidavits and contested the case at the argument on Friday very warmly."

The formal court order is as follows:

"In the Circuit Court of the United States for the Eastern District of Pennsylvania. Victor Talking Machine Co., and the United States Gramophone Co., against the Keen Co., April sessions, 1906, No. 32.

"McPherson, District Judge:

"And now, to wit, October 11, 1909, after hearing and considering the affidavits and other evidence presented by the complainants, and by the defendant The Futernik Co. (formerly The Keen Co.), and after hearing and considering also the arguments of counsel, the court does adjudge and decree that The Futernik Co. has been guilty of violating the final injunction entered in this court on November 5, 1906, by selling certain talking machine sound records of complainants' manufacture (as described in said final decree) at a less price than the price at which the said records were licensed by the complainants to be sold by the Futernik Co. And as a penalty for its contempt in violating said decree, the Court does further adjudge and decree that The Futernik Co. do pay, within five days from this date, the sum of Two Hundred Dollars and the costs of the present proceeding; the said sum of Two Hundred Dollars to be paid to the complainants or their counsel of record as compensation for the time and outlay involved in prosecuting this application."

Dealers who persist in violating their license by price cutting after being restrained by a court order, should bear the above action in mind, as it will doubtless be a precedent for all future similar suits.

A PECULIAR SITUATION.

Some Caustic Remarks by the National Phonograph Co. Regarding Conditions in a Certain City in the South—Dealers Must Wake Up.

The National Phonograph Co., Orange, N. J., are not loath to severely criticise their jobbers and dealers if they are neglectful in a proper and energetic representation of the Edison products. In the present instance the company "hand it out" in the following caustic fashion, and in which words are not minced:

"The astonishing fact has recently been brought to our attention that in a certain city of the South, whose population is approximately 60,000, Amberol attachments and records are comparatively unknown. The city in question, whose name we are withholding for obvious reasons, boasts of one jobber and three dealers! It seems almost incredible that such a condition could exist, and the matter is receiving a prompt and thorough investigation at the hands of our sales manager. It seems to prove that there are localities where our agents are not alive to their opportunities. These localities will be discovered in the near future by our traveling representatives and we shall begin to ask questions.

"We are entitled to know why if our goods are not being pushed and, once the information is in our hands, we shall take prompt steps to remove the obstacle, whatever it may be, that interferes with their advertisement. It is of course possible that in this instance local conditions may be responsible for the apparent inertia on the part of jobber and dealers, and we are suspending judgment pending the receipt of complete facts of the case. It is hard to believe, however, that business conditions were so bad in a city of that size that this most attractive and salable features of the line could not find some market.

"Whether his oversight is deliberate or due to neglect, it is criminal and deserving of the most severe censure. We sincerely trust that further investigation throughout the country will disclose the fact that this case is without a parallel, for we should hate to believe that our jobbers and dealers in every instance, are not giving us the support of their co-operation and enthusiasm."

NEW GRAPHOPHONE MODELS.

The Columbia Phonograph Co. Introduce Three New Styles for 1910, Which Will Interest Progressive Dealers Everywhere.

In another part of this issue of The World, an important announcement is made by the Columbia Phonograph Co., in which they announce the first three Columbia graphophone models for 1910. These contain many individual constructive features, which must appeal to discriminating dealers and purchasers, and each is well worthy the closest investigation. The three models illustrated retail at $25, $35, and $65, and each contains the new Columbia one-piece aluminum tone arm equipment.

The Columbia Phonograph Co. have certainly been tireless in their efforts to provide the trade with new ideas this fall. The latest announcement following their tremendous achievements in the Grafonola line, and which have come in for such widespread notice, emphasize that this institution is a thoroughly "live" one.

LANDAY'S PUBLICITY COMMENDED.

With the October issue of "The Voice of the Victor," the sprightly monthly published by the Victor Talking Machine Co., Camden, N. J., is also sent out the four full page ads used by Landay Bros., Inc., that appeared in the Daily Saratogian, in connection with their branch house at Saratoga, N. Y., now closed for the season. The company add thereto, in flaming red type, this brief commendation: "This is a splendid example of local advertising in support of the Victor Co.'s immense national advertising campaign. The Victor Co. create the demand—local advertising brings the customer to your store."

BACIGALUPI PLACES BIG ORDERS

With the National Phonograph Co.—Enthusiastic Over the Amberola—Orders 25 of Them—Looks for Good Business This Fall and Winter in San Francisco and Locality.

Peter Bacigalupi, the well-known talking machine man of San Francisco, Cal., who has been sojourning in New York for the last few weeks, left for home on Wednesday, spending a few days in Chicago en route. In the course of a chat in The World sanctum early this week he stated that during his stay he had placed orders with the National Phonograph Co. for two carloads of Edison machines, as well as orders for twenty-five Amberolas—the new Edison creation. He had, moreover, the privilege to be the first jobber to hear the Amberola, regarding which he expressed himself in most enthusiastic fashion.

"I expect to do an immense business with the Amberola," said Mr. Bacigalupi. "It is undoubtedly the most perfect product ever turned out by the Edison people, and is a remarkable creation in every respect. The beautiful quality of its tone, the absence of scratching, the superb finish of the cabinet, all make a creation which will win an army of admirers. Business on the Coast is looking up, and I expect an immense holiday trade."

Mr. Bacigalupi also visited the factory of the Victor Talking Machine Co., at Camden, whose goods he handles at retail, and expressed himself as highly pleased with the courtesies shown him, not only by the National Co. and the Victor Co., but by all on whom he called while in New York.

VICTOR BUSINESS EXCEEDS 1907.

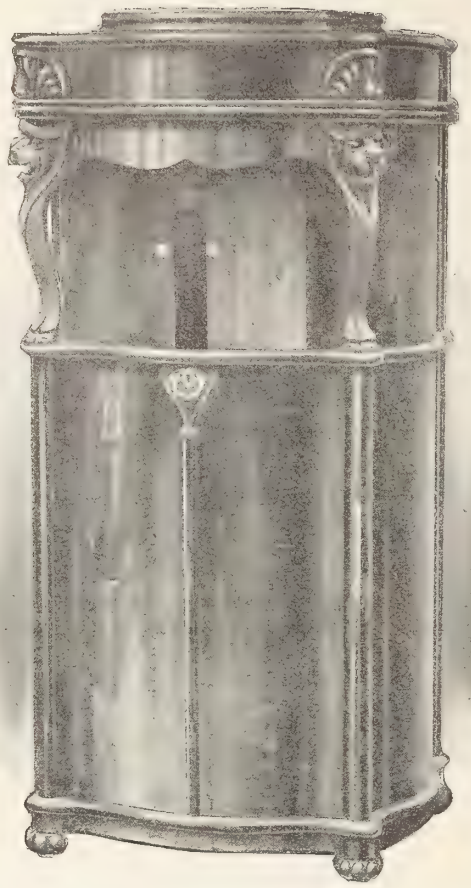
Immense Orders Reaching the Victor Co. Splendid Proof That Business Is Back to Old-Time Standard—What General Manager Geissler Says—New Red Seal Records By Sembrich, Homer, Farrar and Scotti.

Records are being broken these days at the factory of the Victor Talking Machine Co., Camden, N. J., in the way of orders for machines and records. In a chat with Louis F. Geissler, general manager of the Victor Co., on Tuesday, he reported that the volume of business reaching the Victor Co. has not only equaled their great trade of 1907, but is now exceeding it. An idea of the way orders are pouring in may be gleaned from the fact that one day last week Mr. Geissler received orders for 20,000 machines, and the call for Red Seal records is unprecedented.

In view of the foregoing the far-sightedness of the Victor Co., in erecting several immense Victor factories, which are now near completion, is apparent, for their resources will be taxed this fall and winter as never before.

The story of the Victor activity is a reflex of the improved conditions throughout the country, and a happy augury of a still better business for talking machine jobbers and dealers this fall and winter. The imposing list of Red Seal records, which now include so many famous artists, will be increased by many new Red Seal records of Geraldine Farrar, Sig. Scotti, Mme. Homer and Mme. Sembrich. These artists made a number of new records last week at the Victor laboratory and those who had the pleasure of hearing the masters proclaimed them to be the most wonderful creations ever turned out by the Victor Co.

EXCLUSIVE COLUMBI



THE COLUMBIA PHONOGRAPH "DE LUXE"—$200
With Regina Attachment, $225

WE have the healthiest kind of expectation of making prompt deliveries on all Grafonola "De Luxe" orders very soon now.

We knew the instrument would take hold, and take hold quick—but the initial orders got away from us inside of the first three days. The responses to our magazine advertising of this instrument in some of the October issues makes it very clear to us that we have announced the very instrument that a large class of buyers have been looking for—and it is no less clear that Columbia dealers are going to coin money this winter on the Grafonola line.

One thing you can count on. As soon as we have persuaded any man who has the purchase of a hornless machine in mind to step inside of your store long enough to make comparisons, it's all over but the name and address. We are ready to make arrangements for the exclusive handling of the Columbia line in your locality. The Grafonola "De Luxe" ought to bring it to a head. How do YOU feel about it?

BETWEEN the Grafonola "De Luxe" and the Grafonola "Regent," the Columbia line is this minute more interesting to the active dealer than all other musical instrument lines put together. WE MEAN THAT. The Grafonola "Regent" will sell not only to those who have considered the possibility of owning a hornless talking machine but to many people who never gave the matter any serious thought before. This is prediction, mostly, we'll admit—but we are in a position to see what is happening; and this Grafonola "Regent" ALONE is sure to be sufficient reason for a good many dealers to secure the exclusive selling rights of the Columbia line, and the proof will follow pretty close on the prediction. Mark that down, and we will remind you of it again a little later.

THE COLUMBIA GRAFONOLA "REGENT," $200

Columbia Records

Columbia Phonograph Co., Ge

A DEALERS WANTED

DO you remember that just about one year ago we announced the Columbia Double-Disc Record as being a REVOLUTION and not an EXPERIMENT?

Does it look like an experiment to you right now?

And do you remember that we announced the 65 cent price as the RIGHT price—"two records at practically the price of one"?

The fact is that in this one short year the Double-Disc has practically displaced all the single-sided records on the market. Our competitors a year ago frantically pointed to the Columbia Company as being responsible for the Double-Disc in this country—and we very cheerfully assumed the responsibility. We reaffirm it now. We WERE responsible, and we knew precisely what we were doing.

We feel like repeating here one paragraph from our first trade announcement of the Columbia Double-Disc Record: "The dealer who ties on to our first announcement of Columbia Double-Disc Records will find it easy to tie a string around the best of all the record business in his locality and lead it over to the Bank." It's HISTORY now, and the Columbia dealer who was wise enough to negotiate for exclusive selling rights of the Columbia line in his locality has been congratulating himself ever since.

COLUMBIA DOUBLE-DISC RECORDS, 65c.

AND with the advent of the Columbia Indestructible Cylinder Record, the exclusive Columbia dealer very early discovered that the completeness and the strength of his line enabled him to have things pretty much his own way in his own territory.

COLUMBIA INDESTRUCTIBLE CYLINDER RECORDS 35c.

THE Columbia line is the LIVEST factor in the business, this month of October, 1909—and the only dealers who do not agree with that statement are those who are so tied, hand and foot, that they own neither their business nor their opinions.

If you have gone into this business as a free American citizen, here is your chance to cast your own vote and get yourself elected. Write in for particulars of our exclusive dealer plan, if you are not already operating with us that way.

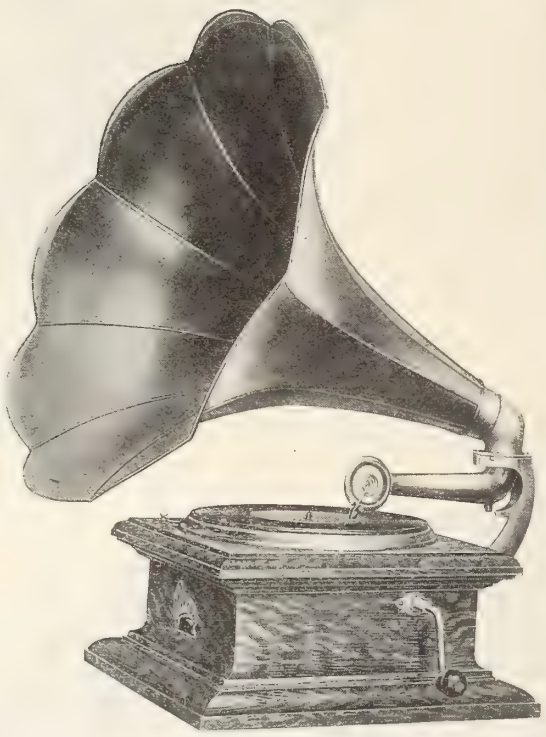
Three of the 1910

Better Cabinets, Finer Finish, New Reproducers, New Start-and-Stop

THE "IMPROVED CHAMPION"
(Type BN) Price, $25



THE "IMPROVED ROYAL"
(Type BNW) Price, $35

THE "IMPROVED IMPERIAL"
(Type BY) Price, $65

Three of the best sellers made better than ever

Columbia Phonograph Company,

Columbias Ready!

We are pretty sure this is the news you have been waiting for.

The first three Columbia models for 1910, that are now available to the trade, are illustrated herewith.

Three of the best sellers in the Columbia list, made better than ever!

Better in features that the most uninterested customer can both SEE and HEAR.

In the BN and BNW types, the massive construction of the quartered oak cabinet is at once apparent – and the graining of the oak is as striking and beautiful as the case of any piano you ever saw—and finished the same way.

The cabinet of the BY is of exactly the same form as the 1909 model but it is made of the finest selected, solid, genuine mahogany—and it looks its money's worth.

All three machines have the new Columbia start-and-stop, speeded to exactly the correct number of revolutions and absolutely fool-proof. This to prevent any of your customers from becoming dissatisfied with their Graphophone because of their having changed the speed and failing to bring it back to the proper point for correct reproduction.

The new Columbia one-piece aluminum tone arm is a part of the equipment of all three models. The reproducer can be instantly turned upward for more convenient re-insertion of needles—or as quickly removed entirely. And the way the new metallic diaphragm picks up and transmits every most delicate sound-wave engraved upon the record, will be a delight to you and a wonder to your customers.

Catalogues will be ready directly, covering these machines and all the other improved types.

Isn't this about the best time you will ever have to consider exclusive Columbia selling rights for your locality? We are ready. Take it up with us.

Gen'l, Tribune Building, New York

INTERESTING RECORDS OF THE TINGUIANS

How the Graphophone Was Utilized by Prof. Cole in Making Some Very Valuable Records of the Members of One of the Strange Tribes in Our Latest Possession, the Philippine Islands —Observations and Impressions of His Visit Well Worth Reading.

(Special to The Talking Machine World.)

Chicago, Ill, Oct. 10, 1909.

The accompanying illustration should prove specially interesting to The World's subscribers in the United States, as it shows members of one of the strange tribes in our latest possession, the Philippine Islands, listening for the first time to records of their own voices through an American machine, a cylinder graphophone.

The protograph is one of hundreds taken in the Philippines, by Professor Fay Cooper Cole, of the Field Museum of Natural History, of this city, who is making a special study of the ethnology, anthropology, language, etc., of the various native peoples. He returned to Chicago last winter, after a two years' sojourn in the Philippines, the greater part of which was with the Tinguians in the north of Luzon. He leaves again this month for the southern Philippines.

GROUP OF TINGUIANS PHOTOGRAPHED AT MANABO, LUZON.

The Tinguians are a wonderfully interesting people, and quite an intimate knowledge of their habits, religious practices and home life can be obtained from inspection of the vast amount of material, twenty-seven tons of which Mr. Cole brought back with him and which are now on exhibition at the Field Museum. Various displays are described in an unusually clear manner in the cards on the cases, and the photographs, taken on the ground, show vividly the manner in which the various implements and objects are used.

The photograph, here reproduced, shows a group of Tinguians, of Manabo, in the subprovince of Abra, North Luzon. It does not reveal them quite in their native simplicity, as the Tinguians are not as partial to clothes as the picture would indicate. Manabo and neighboring villages were ransacked thoroughly before so goodly a showing could be made.

The cylinder graphophone, which proved one of the most valuable items in the equipment of Prof. Cole's expedition, was loaned him by E. C. Plume, western wholesale manager of the Columbia Phonograph Co. It gave a good account of itself, as it was subjected to the hardest kind of usage and received all sorts of hard knocks in the forced marches through almost impenetrable jungles and difficult mountain passes.

Prof. Cole visited regions in the interior where no white man had hitherto penetrated, but the fame of "the machine that talks Tinguian" always preceded him, and proved a valuable introduction. Besides a liberal supply of "blanks" a number of regular Columbia records were included in the outfit, and as the Tinguian is intensely musical in his own way, they made an intense hit. The copper-colored natives showed little appreciation for the classical, but band selections, with plenty of "jingle" to them, and vocals, such as "Good-By, Dolly Gray," "I Wish I was a Loidy," and especially "laughing songs," put them in just the right mental condition for the purposes of the explorer, who could only win the information he sought by establishing the most friendly relations with the people.

The Tinguians are quite industrious, have extensive rice fields to which they devote the greater part of their time, and the men watch and care for them conscientiously during the season of growth. They also raise maize, tobacco, beans, sugar cane for basi, the native fermented drink, and other vegetables and roots, as well as fruits to some extent. The women do but little work in the fields, but they weave nearly all the clothes and blankets used by the family. Some of their work is really artistic, and shows a wonderful sense of color blending, as evidenced by the specimens at the Field Museum. The women do all the house work, but when the men are at home they assist in the care of the children, especially the babies. The standard of morality is by no means low. There is a class of women called "Pota," who live with men not their husbands, but they are held in contempt by other women and are seldom seen at the camp fire gatherings or in other houses. There is no tribal organization as such, the villages constituting the political unit. The government of a village is patriarchal, the old men constitute the ruling class. Of this number there is usually one who by reason of wealth, integrity or knowledge of the customs is called "Lakay," and to him all matters of dispute are brought for adjustment. If the case is of importance or difficult to settle he will summon the other old men, who will deliberate on and settle the questions at issue. They have no means of enforcing their decisions on the people other than it is the custom to obey and the offender is ostracized until he has met the conditions imposed.

In view of these facts it is rather surprising to find that until very recently the Tinguians were head hunters, and the "sport" is still practiced in the mountain districts. Blood revenge seems to be the chief motive.

The weapons used by these people are unique and great care and ingenuity is used in their construction. The shields were not made simply for purposes of defense. From the top of the shield extend two prongs which in hand-to-hand combat were and are still, in the districts mentioned, used to clutch the victim by the neck while the head axe was brought into play. The lower end of the shield has three prongs designed for use in clutching the legs of a fleeing victim. The head axes and spears shown at the Field Museum are beautifully modeled, and the metal heads are finely tempered and shaped.

The Tinguians are very religious. Their chief deity, known as Kadaklan, lives in the sky; his wife lives in the earth, and is also powerful, and their two sons are quick to punish any disobedience of the father's commands. More than 150 other spirits, some good, some evil, are known by name, and at some time or other visit the people through the mediums. These latter preside at all the principal events in the lives of the villagers. They are supposed to incarnate the spirits during the ceremonies and great stress is laid on their power in reading signs and in exercising evil influences. They are always present at births, and their final services are rendered when death comes.

The Tinguians are great singers; they sing at work and they sing at play. Whenever there are gatherings of the people someone will sing the "Daleng," in which he intones tales of current events or of the heroes. There are a few set songs, but different types of chant are used in religious ceremonies, in love songs, lullabies, and child songs. The words are always different and entirely impromptu, but the motive can be discerned from the type of tune used. The musical instruments consist mainly of drums, copper gongs, mouth flutes, nose flutes, played with the nostrils instead of the lips; pan pipes, made out of reeds, and crude instruments made of bamboo, something on the violin order, and also bamboo jew's harps.

Needles Free To Prove Quality

"THE BEST THAT MONEY CAN BUY"

Playrite TRADE MARK

NEEDLES

"THE NAME TELLS WHAT THEY DO"

Best for VOLUME, TONE and LASTING QUALITY. PLAY RIGHT from START to FINISH. PRESERVE RECORDS and can be used on ANY DISK MACHINE OR RECORD. Packed only in RUST PROOF packages of 100. RETAIL, 10c. per 100; 25c. 300; 75c. 1,000.

BLACKMAN TALKING MACHINE CO.

J. NEWCOMB BLACKMAN, President

97 CHAMBERS STREET NEW YORK CITY

TIMELY TALKS ON TIMELY TOPICS

That the concealed horn machine has achieved a wonderful success goes without saying, as the French say. Every one of the large manufacturers that figures to any great extent in the American market have examples of this type in the market and their popularity is increasing with both the trade and the public. The Victor Talking Machine Co. were the pioneers in this line with their now famous Victrolas, and from the very first the demand was so heavy that the company were unable to adequately supply the call. The Victrolas were not only a departure from the ordinary model of machine cabinet, but a distinct step of progress that expanded trade and stimulated sales among people who were inclined to look with disfavor on the entire talking machine proposition. The beauty of the Victrolas placed them in a class by themselves, creating a "piece of furniture," if you please, akin to the piano and similar instruments, and therefore was welcomed as an addition to the musical equipment of the home and given a post of honor either denied the talking machine or given grudgingly or with misgivings as to one's true artistic taste and judgment.

That, however, has passed away, or, as Richard III. observed in his splendid soliloquy, is "in the deep bosom of the ocean buried." Proof of the success scored by the Victrolas is furnished by the placing of resembling concealed horn machines on the market by the Columbia Phonograph Co., General, whose series of Grafonolas were formally announced to the trade in last month's World. To be sure, the models or designs differ; but the pleasing results aimed at, to provide a handsome "piece of furniture" that would grace any room, no matter how elegantly fitted up, are accomplished, and a large sale is anticipated for this beautiful line of goods. In fact, the orders already placed with the company justifies the realization of this sanguine statement. Columbia jobbers and dealers have long wanted a line of this kind, and with characteristic enterprise, energy and resourcefulness the company have responded to this general demand with their Grafonolas.

Last, but by no means least, the Amberola, the splendid product of the National Phonograph Co., is given Edison jobbers and dealers, who have likewise been sensible that a concealed horn machine was also due them. With their customary caution, the company, who have been working on the Amberola for a year or possibly more, have given no inkling as to their intentions until they were satisfied that the machine was as perfect as ingenuity, inventiveness and the highest class of workmanship could make it. At various times during the past year reports were current that the "National" were about to "spring something good." The Music Trade Review was the first newspaper to contain an exclusive authoritative announcement that the Amberola had "arrived," and this issue of The World contains Sales Manager Dolbeer's official confirmation of that report, and it is interesting from more than one point of view, of which it is needless to dwell upon here.

The Amberola made its initial bow to the trade during the Hudson-Fulton celebration ceremonies in New York, and at a most appropriate time, it may be added. The National Phonograph Co., in their usual generous and hospitable manner, gave a series of what may be termed functions in honor of the Hudson-Fulton centenary at their New York offices in the Edison building on Fifth avenue. Three of the great land parades passed the place, in front of which a comfortable stand was erected, and from this point of vantage an unequaled view was had of the marvelous processions. It is unnecessary to dwell upon the entertainment offered the guests present, for that is told more fully elsewhere. Suffice it to say, those fortunate enough to enjoy the scenes and surroundings had also the pleasure of listening to the Amberola for the first time, and the verdict of its perfection of tone quality was universal. The pattern and finish of the machine was likewise commended as the work of skilled artisans. In one respect the Amberola differs absolutely from the Victrolas and the Grafonolas in that the latter are disc machines, while the former is confined to the Amberola and Edison standard cylinder records.

The record manufacturers have solved the copyright problem by attaching whatever fee they may have to pay for the privilege of using the music under the law to the regular figure for the goods. In the bulletins this fact will be specially noted, so that no mistake can be made in ordering on the part of either the jobber or dealer. As remarked before in The World, it is true the record maker will choose the copyright selections conservatively, and the helter-skelter methods hitherto prevailing in this respect will cease. Recording a piece of music is something of an expense and differs materially from the process that obtains in cutting perforated rolls for automatic musical instruments. Outside the cost attached to the arrangement for the rolls and the master records, singers, matrices and many other incidental expenses attached to recording and pressing, are to be met, not to say anything of the difference in the selling price between the two. All this must be considered, and therefore the record manufacturers must needs be cautious.

Speaking of copyright and records, reminds the writer of the contention made by one of the "talent" whose services were not in such frequent demand as before the new statute went into effect. Of course, the artist claimed that he copyright act was unconstitutional and that "eminent" authorities had assured him of this fact and were ready to start a suit whenever somebody produced the price. The singer, whose mellifluous voice is on a large number of records—popular, classical and otherwise—stated that aside from what the legal gentleman had told him, he personally was confident that the copyright law was in conflict with the Sherman anti-trust act, therefore its provisions were in restraint of trade and consequently it would not "hold water." When it was made clear by several amused listeners to this original argument that the Sherman law applied to interstate commerce as applied to common carriers only and in no wise had the remotest bearing on copyright restriction, the brilliant member of the record singers' corps was first indignant, then surprised and finally closed the incident in a diplomatic way by ordering "another round."

A Toledo, O., journal descants on the "discovery" by a local genius of a celluloid record, on which "he has been laboring for years." As the newspaper eloquently says: "The claim made by the Toledo inventor has attracted the attention of the phonographic trust." Good. Further: "The cylinders (celluloid) are so strong that the inventor, by way of demonstration, hurls them violently across a room and up against a wall to prove that they are unbreakable. They rebound like a rubber ball and show no signs of dents or scratches. They also give forth a splendid tone when placed on the phonographic machine. A company is being organized to manufacture the records in Toledo. Several of the most prominent capitalists in the city have become interested and the inventor expects to be turning out the records in immense quantities in a short time." Now, let us hear them.

Edward N. Burns, manager of the Columbia Phonograph Co.'s export department, and his family, will leave Genoa, Italy, October 28th by the "Princess Irene" for New York.

NATIONAL CO. ENTERTAIN.

Erect Grand Stand in Front of Their New York Offices and Invite Friends to View Hudson-Fulton Celebration Events Therefrom—Furnish Elaborate Spread—Those Present.

The week of Oct. 3-9—Tuesday, Thursday and Saturday—the National Phonograph Co., Orange, N. J., entertained a number of the trade and business friends at their New York offices, 10 Fifth avenue, during the land parades incidental to the Hudson-Fulton celebrations. The building was specially illuminated with electric signs, the trade name of "Thomas A. Edison" being reproduced in facsimile in the familiar way, and the words "Phonographs" and "Motion Pictures" on the second and first floors. The company provided a commodious stand in front, from which the various processions were witnessed to the very best advantage. An elaborate spread, served by expert caterers, followed each of the splendid spectacles, and the care and attention bestowed upon the visitors on the several occasions was in the usual hospitable manner for which the company is noted. Everything to make their guests comfortable was extended, and the praise for the management of the several affairs was unstinted and deserved.

Among those present from the trade were: C. J. Schmelzer, Schmelzer Arms Co., Kansas City, Mo.; L. J. Gerson, John Wanamaker, Philadelphia, Pa.; Peter Bacigalupi, Peter Bacigalupi & Sons, San Francisco, Cal.; A. W. Toennies, Eclipse Phonograph Co., Hoboken, N. J.; S. B. Davega, S. B. Davega Co., New York; J. F. Blackman, J. F. Blackman & Son, New York City; I. Davega, Jr., I. Davega, Jr., Inc., New York; A. O. Petit, Edisonia Co., Newark, N. J.; J. Newcomb Blackman, Blackman Talking Machine Co., and Mrs. Blackman, New York; Louis Buehn, Louis Buehn & Bro., Philadelphia, Pa.; J. Samuels, J. Samuels & Bro., Inc., Providence, R. I.; N. Goldfinger, Siegel-Cooper Co., New York; F. J. Heppe, C. J. Heppe & Son, Philadelphia, Pa.; H. M. Pierce and T. C. Brown, Fort Worth, Tex.; Harry Seely, New York; Edward Lyman Bill, Talking Machine World.

The company were represented by the following: Thomas A. Edison and Mrs. Edison; Frank L. Dyer, president, and Mrs. Dyer; C. H. Wilson, general manager, and Mrs. Wilson; F. K. Dolbeer, general sales manager; Wm. Pelzer, vice-president, and Mrs. Pelzer; A. Westee, treasurer, and Mrs. Westee; Peter Weber, superintendent of the works, and Mrs. Weber; L. C. McChesney, manager of advertising, and his son and assistant, L. W. McChesney; E. H. Phillips, manager of the credit department; C. E. Goodwin, manager of salesmen, and Mrs. Goodwin; N. C. Durand, sales manager of the Edison Business Phonograph Co., and Mrs. Durand; Walter H. Miller, manager of the recording laboratory; W. H. A. Cronkhite, his assistant; John Pelzer, sales manager of the Edison Kinetograph Co., and Mrs. Pelzer; James H. White and Mrs. White; Frank E. Madison, of the legal department, and Mrs. Madison; A. C. Ireton, of the sales department, and Mrs. Ireton; H. T. Leeming, of the traffic department; C. S. Osborne, of the credit department; Mrs. S. L. Terhune, Mrs. W. H. Mackgraf, H. F. Miller, J. W. Aylsworth, J. F. Scull, W. L. Eckert, R. A. Bachman, E. E. Hudson, J. V. Miller, Geo. Weber, Wm. Weber, A. W. McCloy, E. L. Aiken, C. C. Squires, A. M. Hird, F. A. Burnham, Jr., R. H. Beach, W. H. Meadowcroft, J. F. Rogers, W. J. Buehler, J. F. McCoy, Mr. Redfield, Fred Ott, F. E. Beatty, J. H. Fertig, L. A. Dubernet, E. E. Davidson, H. Green, Mr. Findlay, Chas. Paynes, Mr. Taylor, D. S. Murray, Mr. Smith and J. A. Joubert.

Another Hebrew list is also published by the Universal Co. As the records are from the expert recording of Henry J. Hagen, they rank in point of finish, smoothness and quality with the best in the market. General Manager Macnabb says the fall business of the company is opening up in a very satisfactory manner; a number of new jobbers have been listed and the sales for the season will be larger.

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 156 WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

Present Conditions Tend to Strengthen the Belief Among the Talking Machine Trade That the Business for the Winter of 1909-10 Will Be the Best for Several Years Past—Big Increase Already Shown Over Last Year—Weaker Dealers Weeded Out During Dull Times While New and Stronger Dealers Crop Up—Higher Priced Outfits in Demand—Much Interest Shown in Edison Amberola—Bissell-Cowan Co.'s Fine Department—Lyon & Healy Active—New Columbia Machines Popular—Much Expected of New Four-Minute Indestructible Record—An Optimistic Chinaman—New Fibre Needle Cutter—All of the Trade News.

(Special to The Talking Machine World.)

Chicago, Ill., Oct. 9, 1909.

The frequent predictions made, that the fall and winter trade of 1909-10 is to be the best that the talking machine business has known for several years, gain strength as the result of the experience of local jobbers during September and the opening days of October. September was in many respects a thoroughly satisfactory month. Like its immediate predecessor, it showed an important increase of business as compared with last year, and marked the opening of the fall business in quite a vigorous fashion. While there may be a tendency on the part of some of the smaller dealers still to order in an extremely hand-to-mouth manner, there is more of a tendency, as a general proposition, to lay in stock and be prepared for a good, brisk trade, than at any time since the early fall of 1907. Jobbers say that dealers, who have been the most timid, have become infected with the idea that business is coming back in full volume this season and that travelers hear little talk of a pessimistic nature. Advance orders for October records received by the jobbers were exceptionally satisfactory.

A somewhat encouraging feature, which has been mentioned to the writer several times during the past few months, is that there has been a considerable weeding out of the weak-kneed dealers during the past two years and that there was probably never a time when there was a greater proportion of rigorous hustlers in the trade than at present. Practically every jobber reports the opening up of a number of desirable dealers within the past month.

Tendency Toward Higher Priced Machines.

That the tendency is toward the medium and higher-priced machines and away from the cheap proposition, is revealed in talks with jobbers all along the line, and the demand for Victrolas is an increasingly dominating factor in the Victor trade. The continual advertising by the Victor Co. has stimulated, not only the interest of the consumer, but the enthusiasm of the dealers, even in the smaller towns. While still outclassed, numerically, by the $200 and $225 machine, the Victrola XII is steadily growing in demand, although as previously mentioned, it seems to be fitting into a place of its own and no material reduction in the sales of the other styles is anticipated.

The local branch of the Columbia Co., report broad interest and brisk demand for their several new styles of concealed horn graphophones.

New Creations in Demand.

A great deal of interest is manifested in the new Edison Amberola and the photographs and descriptions, which have been received within the past few days by the jobbers, serve to confirm the previous strong representations made by the National Co. Everyone agrees that the cabinet design is an exceptionally beautiful one and the special new machine features described, add to the belief that the new machine will find a demand awaiting it among the very best class of trade. There has not been time to test the attitude of the dealers as yet to any extent. The photographs are now in the hands of the travelers and favorable reports and numerous sample orders are early expected.

Brisk Opening of Fall Business.

Locally, the downtown dealers report a brisk opening up of fall business. The latter part of last month was exceptionally good and the trade is expected to grow in volume from now on. City salesmen report that business with the dealers in outlying districts is beginning to pick up, and even in the manufacturing districts, where the depression has been the greatest, indications of a marked revival are already in evidence.

Bissell-Cowan Co. Handling Talking Machines.

The Bissell-Cowan Piano Co., the Chicago agents for the Knabe and Chickering and Foster-Armstrong pianos, is the latest concern in the downtown district to establish a talking machine department. The company occupy the building at 202 Michigan, adjoining the Fine Arts building, and opening into it on each floor. Manager Arthur Bissell has decided to devote the handsome mezzanine floor, above the ground floor warerooms, to the talking machine department, and it is now being fitted up for that purpose. The Victor lines only will be carried. There is a fine opportunity for window display, as the floor has a solid crystal front on Michigan avenue, and some space will also be given for display in the ground floor windows. The company will, of course, go after the Victrola and Red Seal trade vigorously and the location is certainly an ideal one for this class of business. The Fine Arts building is a veritable music center, full of conservatories and studios and the Studebaker theater and Music Hall, both of which are located in the building, attract constant crowds. Music Hall can be reached through the Bissell-Cowan Co.'s warerooms and, according to present plans, will be utilized for noon concerts, the Auxetophone being used. A manager has been secured in the person of E. R. Sues, formerly a member of the Victor Co.'s traveling staff, and a man of retail experience as well, and one peculiarly adapted for handling the best class of trade. The company was signed up as Victor dealers by the Talking Machine Co.

A. V. Chandler Again at the Helm.

A. V. Chandler, Illinois traveler for the National Phonograph Co., was confined to his home for three weeks by severe illness, but is again flashing his jovial countenance through the length and breadth of the state.

Lyon & Healy's Fall Campaign.

Lyon & Healy have started the fall campaign in a decidedly vigorous fashion. Over half of the Adams street window frontage is devoted to talking machines and two of the Wabash avenue sections are devoted to the same purpose. More space than heretofore is given to Victor goods, while the Edison is being featured much more extensively than heretofore. A number of machines equipped with the new Cygnet horn are being shown. The October Victor record window is a unique one, various records being shown on standards and each decorated with a Victor flag. A large flag waves over all, being kept in motion by a concealed fan. Two new Edison salesrooms have been added on the third floor, east of, and connected with, the two Victor rooms adjoining Victor Hall. In one of these, the I. C. S. language department is located.

Addition to Lyon & Healy Sales Staff.

An important addition to the retail force has been made in the person of John Otto, for the past five years with the Rudolph Wurlitzer Co., and prior to that, for eight years in charge of the talking machine department of Siegel, Cooper & Co. He will co-operate with Manager Joe Vasey, of the retail machine sales, but will especially devote himself to the development of the Edison business. Edison recitals are now given during the morning in Victor Hall and considerable advertising of the fact in the dailies has been indulged in in the past few weeks. Beginning at twelve o'clock noon, and lasting through the afternoon, the Victor concerts are given as usual and seem to be attracting increasing numbers.

Proofs of Graphophone Popularity.

W. C. Fuhri, district manager of the Columbia Phonograph Co., reports a decidedly satisfactory state of affairs, as shown by reports from all parts of the extensive territory under his jurisdiction. When seen, he had two letters before him, one from the Daynes-Beebe Music Co., of Salt Lake City, Utah, who have recently been made exclusive Columbia jobbers for Utah, and who speak very enthusiastically of the line of business they are now receiving and of the prospects for business during the fall and winter. The orders they are sending in, according to Mr. Fuhri, thoroughly back up their statements. The Southern Talking Machine Co., of Memphis, which recently bought out the Columbia branch in that city, also report excellent wholesale and retail business and say that the only trouble is in getting goods rapidly enough to supply the demand.

Grafonola's Make a Big "Hit."

Everybody around the Chicago branch of the Columbia Co., is very enthusiastic regarding the "library table" Grafonola, samples of which in golden oak and mission style, were first received a couple of weeks ago. A number of sales have already been made at retail and wholesale business is coming in rapidly. It is stated that the company already have orders from all over the country, for between 300 and 400 of this style of Grafonola alone.

Four-Minute Indestructible Record.

B. F. Philpott, manager of the Columbia Co.'s indestructible record factory, spent several days this week in Chicago, his former home, making his headquarters, of course, at the local branch. He is full of the glories of the new four-minute indestructible Columbia record, which will be on the market within a few weeks, and which Mr. Philpott declares will prove a revelation to the trade. He returned to Albany on Thursday.

The Outlook Through Oriental Eyes.

Sim Law, Chicago's Chinese talking machine dealer, who now has an exclusive ground-floor store, at 365 South Clark street, thinks that the best and biggest days of the talking machine business are yet to come. "The wonderful improvements in all types of machines, together with the improvements in recording, are constantly widening the field," remarked Sim. "All three of the companies are increasing the Chinese catalogs continually, and the manner in which the selections are recorded is a joy to the native." Mr. Law handles not only Chinese, but Japanese and Corean records in considerable quantities. Besides his local business, he has quite a mail order trade with his countrymen in all parts of the United States.

Lucker a Visitor.

Lawrence Lucker, of the Minnesota Phonograph Co., spent Tuesday of this week in Chicago.

"Uncle Josh" Calls on Chicago Friends.

Cal Stewart, who divides his time between vaudevilleating and the making of "Uncle Josh" records, blew into town a few days ago, called on most of his friends in the trade as usual, listened to some of his own "joshes" and made a few wax cylinders for admiring customers who happened to be around.

Dan Creed Enjoys "Outing."

Dan Creed, credit man for the Talking Machine Co., is looking fit and nifty, as the result of a fortnight's vacation spent in Ohio and Indiana. During the first six days he saw ten baseball games and the second week he rested.

Schiller Piano Co. Handling the Victor.

The Schiller Piano Co. have opened a store at 53rd street and Ellis avenue, and have put in

The Latest Addition To The Family of

"The Cabinet that Matches"

Feature I.—**List Price, $37.50** less your regular Victor Discounts. Figure it out—the **cheapest** and **best** Cabinet on the Market.

Feature III.—Top is countersunk to make a harmonious whole, and prevent the **Victrola XII** from slipping off.

Feature IV.—Drawer placed in the **bottom** of the Cabinet to bring the Records nearer to the hands.

Feature V.—Sliding Shelf on the side for the convenient handling of Records.

Feature VI.—Capacity 250—10" or 12" Records.

Feature VII.—**We will ship this "Cabinet that Matches" any place in the United States and if it is not what we claim for it, or if it does not please you, you may return it at our expense.**

¶ You may place advance orders with us for regular **Victor Talking Machines** or **Victor Victrolas** to carry you over your busy Fall Season with no obligation on your part to take them.

¶ We have a plan also for easing the financial load which sometimes burdens the Dealer at this time, the busiest of the year.

The Talking Machine Company

72 Wabash Avenue, Chicago, Illinois

a good stock of Victor goods. The selling end is in charge of C. F. Dickinson, formerly of the C. F. Dickinson Music Co., which conducted a piano and talking machine business in that locality.

Starck's Aggressive "Talker" Publicity.

The P. A. Starck Piano Co. report quite a brisk business in their Victor talking machine department, opened last month. They are doing some aggressive advertising in the dailies.

W. H. Nafey Returns from the Far East.

William Henry Nafey, one of the Victor Co.'s recording experts, was in Chicago for a few hours the other day, on his return to the factory after a year and a half spent in China, Japan, and the Philippines, making records for the company. Mr. Nafey formerly spent considerable time in Brazil and South America for the Victor people.

Geo. W. Lyle Visiting the Trade.

General Manager George W. Lyle, of the Columbia Phonograph Co., is expected in Chicago Sunday, and will remain Monday and Tuesday. He is on an extended trip, which will take him to the coast.

Wurlitzer's Improvements Completed.

The extensive improvements which have been under way at the Rudolph Wurlitzer Co.'s Chicago branch, will soon be completed. Most of the interior work has been done, but the remodeling of the front is now in progress, and when completed the company will have warerooms which will rank with any in the country, and the addition of a piano department will naturally have a beneficial effect on the talking machine and other lines on account of the increased number of people attracted to the store. Retail business has naturally been interfered with to some extent the past month, owing to the demoralization due to the torn-up condition of the building, but the showing has been a surprisingly good one considering the handicap. The house has a new wholesale traveler, Howard P. Gibbs, formerly with the Chicago Music Co. He is on his initial trip through Wisconsin and is giving a good account of himself.

D. C. Heath has succeeded A. M. Copeland, the Victor and Edison dealer of La Porte, Ind. He was in the city a few days ago buying stock.

Some Distinguished Visitors.

Edward M. Berliner, of the Berliner Gramophone Co., Montreal, Can., was in Chicago last week, accompanied by his wife.

Peter Bacigalupi, of San Francisco, the big Edison and zonophone jobber, spent two or three days in Chicago recently. He was on his way east, and while here he was entertained by Arthur D. Geissler, of the Talking Machine Co.

Wiswell as a Nimrod.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy, returned on the 20th, of last month, from a ten days' vacation, spent at Minoqua, Wis., in company with a party of friends, which included W. S. West, the talking machine dealer of Joliet. They found duck hunting good and also captured a number of very gamey and weighty muskallonge. Mr. Wiswell is exceedingly gratified with the September business, which showed a material improvement over a year ago. The orders for Victrolas coming in from dealers is something quite remarkable. The Edison business is also coming along in fine shape. The majority of Edison dealers order complete set of the 50 new Amberol records appearing in the October lists. Demand for Cygnet horns from Lyon & Healy dealers is rather exceeding their expectations.

B. & H. Fibre Mfg. Co.'s New Cutter.

B. & H. Fibre Mfg. Co. have just brought out a new cutter for repointing B. & H. fibre needles which marks a distinct advance over the very efficient device formerly marketed by them. The blade is so constructed and adjusted to the block that a sliding or slicing motion is obtained on the downward stroke, invariably insuring a smooth and perfect point. The blade is made of the highest grade tool steel, properly tempered, and can be easily detached from the block and re-sharpened with a small honing stone. The cutter is nickel-plated and highly polished. The announcement of this new cutter will be received with interest by the increasing number of dealers handling the fibre needles. The demand for this needle, by the way, is growing remarkably, both here and abroad, and the company have hundreds of letters from dealers who testify to its value and its influence in increasing the sales of machines and records.

CABINET FOR VICTROLA XII.

Just Put on the Market by the Talking Machine Co. of Chicago—A Most Harmonious Example of Designing.

(Special to The Talking Machine World.)

Chicago, Ill., Oct. 10, 1909.

The accompanying illustration shows the latest addition to the line of "Cabinets That Match," of the Talking Machine Co., of Chicago, and which includes a special cabinet for every type of Victor machines. The newcomer is designed exclusively for the new Victrola XII machine, and more than sustains the pace set by its predecessors in the line in point of harmonizing with the case of the machine it is made to accompany. A unique feature is found in the fact that the top of the cabinet is counter-sunk with the corners so beveled that the feet of the instrument fit snugly therein, thus making a completely harmonious outfit. The ordinary observer is unable to perceive where the cabinet stops and where the machine begins. This perfection of harmony is preserved throughout. The doors of the cabinet open the same way as the doors of the Victrola XII, even the small knobs matching exactly. The cabinet is made of the best Cuban mahogany, beautifully figured. As shown by the illustration, the architectural design is one of peculiar symmetry and beauty.

A feature calculated greatly to promote the convenience of the user is that the drawer is placed at the bottom instead of at the top of the cabinet, thus bringing the records nearer to the hand. A slide is put in the front of the cabinet so that in case the outfit is placed near a wall the slide can still be conveniently used.

LATEST CREATION OF THE TALKING MACHINE CO.

The list price, at $37.50, makes the cabinet represent really remarkable value to the retail purchaser and gives him his outfit at a figure that is certain to be appreciated. The regular Victor discount applies to the dealer.

SALTER MFG. CO.'S NEW CATALOG.

The Well-Known Manufacturers of Talking Machine Cabinets Issue a Handsome Volume Containing Illustrations and Descriptions of Their Latest Styles of Cabinets.

(Special to The Talking Machine World.)

Chicago, Ill., Oct. 10, 1909.

The Salter Manufacturing Co., of 337-343 N. Oakley avenue, Chicago, are just mailing to the trade a catalog devoted exclusively to disc and cylinder record cabinets. It is of convenient size, attractively gotten up, and illustrates a line of special interest to enterprising talking machine dealers. While the company furnish disc cabinets with vertical shelves, the greater part of the line is now equipped with the horizontal shelving, which they introduced some months ago, and which has proved a remarkable trade winner. Each shelf is lined with soft green felt, which not only prevents the record from being scratched, but makes an exceedingly attractive appearance and as each shelf accom-

Sectional Cylinder and Disc Record Cabinets

Resembles a Handsome Sectional Book-Case

The sections for cylinder records are equipped with thirty-three compartments, each compartment holding four cylinder records, each section having a total capacity of 132 cylinder records.

The sections for disc records are equipped with forty compartments, each compartment being subdivided for three disc records, each section having a total capacity of 120 records.

The record filing capacity in these cabinets is unlimited.

SALTER NEW STYLE CABINET NO. 777.

modates only one record, the arrangement is especially adapted for the double-faced disc. The accompanying illustration shows the number 777 disc cabinet, announced last month, and on which the company have already booked a fine volume of orders. It is designed for the new Victrola XII, and is of elegant design and finish. It embodies the horizontal felt-lined shelving and is made to hold 160 records, 80 twelve and 80 ten-inch. It is of solid mahogany, with rounded corners, with hand-carved feet and capitals. A fancy shaped molding on top aids in harmonizing the cabinet with machine cabinet proper, and keeps the machine from slipping when being wound. The cabinet is 37 inches high and the top 21½x26½. Practically the same cabinet, but of less ornamental design and selling at a lower price, is made under style 778.

The line of cylinder cabinets illustrated in the catalog embody the company's new arrangement by which the records can either be placed in the shelves in the boxes or on pegs, as desired.

1504 NORTH 40th AVENUE
CHICAGO, U. S. A.

EASTON ENCOURAGES THRIFT.

The President of the Columbia Phonograph Co. Makes Some Valuable Suggestions to the Employes of the Company Showing How the Saving of Wages Is No Sacrifice—Well Considered Suggestions Which Have a Broad Application.

"Why don't you take a slip of paper now, and write down something like this: 'Beginning today I'm going to put by twenty per cent. of my salary—that settles it!'"

In these words did Edward D. Easton, president of the Columbia Phonograph Co., open a broadside upon his employes, recently, in the excellent and neatly gotten up little periodical called "The Columbia Salesman," issued by this company.

Mr. Easton, be it known, his taken this means of advertising his company to his own employes and of preparing his employes to advertise their thrift and stability to the company—a novel form of advertising that has been productive of remarkable results in this organization. Mr. Easton continues:

Try Writing It Down.

"I have noticed that it often makes a good decision ten times as good to get it down on paper. You try it.

"If you had done that three or four years ago, twenty per cent. wouldn't look like a hardship now—and you could have done it, you know you could.

"When you have stuck to it through the first straight year, that saving plan becomes an easy habit. You don't feel as if you had been denying yourself after all, when your savings have begun to accumulate.

"And you find you don't want some of those things that you would think you wanted if it were not for that bank book that stiffens your inside pocket. It makes you think twice to spend once, and the chances are you find yourself astonished to realize how many things you must have on first thought and wouldn't give a snap for on second thought. But do your saving on a plan. Make it regular. Form the habit.

The Little Wastes That Count.

"It's the little wastes that count. Things like this have been said so often that they usually hit the extravagant man on a sore spot. Yet it was true the first time it was said, it's true now, and it will still be true later on when you are figuring how much you own, instead of how much you earn. You may say this is your private affair, not the company's affair; yes, but it is the company's concern, too.

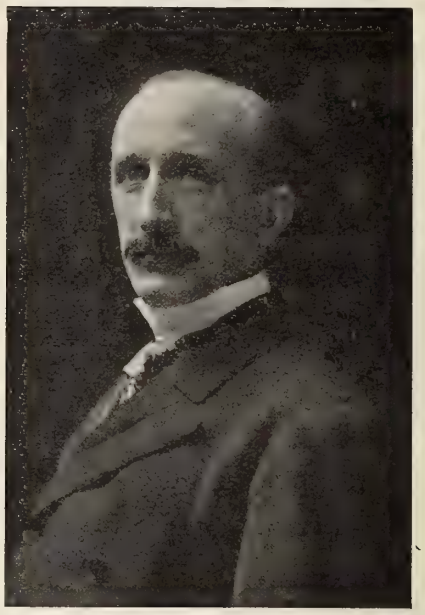
"Every good manager of a corporation is sure to first demonstrate his fitness by a good management of his own affairs, and he cannot safely be trusted with the larger until he can master the smaller proposition. The same principles and the same methods are used in the successful management of a ten-million-dollar corporation as are employed in the right handling of a ten-dollar salary.

"Our company is advancing men all the time, and is keenly anxious to advance others. All other things being equal, the man who is able to conserve his own affairs must always be the one chosen to handle the company's affairs. The thrifty man, whose savings are regular, and whose employers know him to be steady in habits and never in debt, is sure to get ahead of the man of brilliance who cannot live within his income.

"This is true everywhere—and, perhaps, especially true in this company. There is hardly any one thing more distasteful to the heads of this enterprise than extravagance and thriftlessness. Our head men have reached the top on a rigid plan of keeping expenses inside of income—even from the first week's salary of a very few dollars.

"The future success of the company depends on the men now growing up in the service. Those who are wasteful, extravagant, living up to their utmost cent, will surely fail to do valuable work and the company cannot long continue to employ them.

"Those who are not only efficient but careful and economical will be advanced and share with the company in that prosperity which is thus assured; and this applies to everyone—from the stock boy just starting, all the way up to the most responsible manager."



EDWARD D. EASTON.

SOME ATTRACTIVE ADVERTISING.

Clever Work Done by the Talking Machine Co. of Chicago—Has Been Widely Noticed.

This is the day of original and attractive advertising and much favorable comment has been made upon the advertising put forth by the Talking Machine Co., of Chicago.

This company's advertising in The World has been attractive, original and forceful. It shows careful planning, and Arthur D. Geissler is to be congratulated upon the dignified methods of publicity which he has adopted in giving publicity to his wares.

Advertising is an art and it deserves to rank as such, and when space is attractively filled it has an added value to the advertiser.

BUSINESS STEADILY IMPROVING.

F. K. Dolbeer, general sales manager of the National Phonograph Co., Orange, N. J., in exchanging views upon the current situation, said: "The factory is now receiving orders for goods by wire and the outlook is improving and brightening daily. Our working force is not as large, to be sure, as in previous years before the slump, but we are employing a large number of people and every department of the works is busy."

W. S. Moffett, manager of the financial department of the New York Talking Machine Co., New York, who returned from a sixteen days' trip through Pennsylvania and New York on October 1, said: "I found business improving. Dealers now feel more inclined to buy, more so than for six months past. You know the summer was none too prosperous for talking machine interests at the best, and the four or five months just over have been very slow. Now, however, a different spirit seems to animate the dealers, excepting the small people, who can never see much farther than the end of their noses. Dealers of any importance are satisfied trade will be good.

TRADE ITEMS FROM ST. LOUIS.

Business Shows Steady Improvement and Dealers Look Forward to Very Busy Winter—Excellent Record Business—Some of the Good Sellers—L. A. Cummins' Trip—St. Louis Talking Machine Co. Decorate for Centennial—Personal Notes of Interest—The New J. H. Buettner Co. Department in Charge of H. J. Berlin—S. M. Field a Visitor.

(Special to The Talking Machine World.)

St. Louis, Mo., Oct. 5, 1909.

The talking machine business for the past month has been quite good, and it is improving daily. The general feeling among the dealers is that we are to have a big fall and winter trade in it.

The St. Louis Talking Machine Co. report business as steadily improving, with the prospects for a banner fall business. The demand for Victrolas has been especially brisk, several of these having been sold in the last two weeks to very prominent St. Louis residents.

Their record business has been excellent, with the demand running principally to popular and light opera selections. The new medley combinations, which give all the catchy numbers from the light operas, have proven wonderful sellers, also the four new records by Leo Slezak, the famous Vienna tenor, have been received with enthusiasm.

O. A. Gressing, manager of the St. Louis Talking Machine Co., who has just returned from a trip extending over ten days, spent calling on their dealers in Indiana, Kentucky, Tennessee and Arkansas, reports the outlook as being the most promising since before the panic. Particularly is this true of Evansville, Ind., Memphis, Tenn., Little Rock, Ark., and Springfield, Mo.

L. A. Cummins, traveler for the St. Louis Talking Machine Co., has returned from one of the most successful trips he ever made in southwest Missouri. Mr. Cummins says that during his entire experience in the talking machine business he has never seen the outlook so promising. What particularly impressed him was the demand for the higher priced machines, including Victrolas, and he was successful in placing Victrolas in cities on his trip where this instrument had never before been introduced.

S. H. Johnson, of the St. Louis Talking Machine Co., has been confined to his bed with a severe attack of throat trouble, but from which he has safely recovered.

The St. Louis Talking Machine Co., during the Centennial Week, had their store handsomely decorated in honor of the event, and also in one of their windows had placed one of the Victor "Ready Made" window displays. There is no question but that the "Ready Made" window display makes a powerful appeal to the public. The crowds that gathered before this window during the Centennial Week were the best testimony that it is a wonderful advertising medium.

The Centennial Week visitors who made their headquarters at the St. Louis Talking Machine Co. were Mr. and Mrs. R. A. Gray, Quincy, Ill.; Mr. and Mrs. G. C. Hawkins, Decatur, Ill.; Mr. and Mrs. E. A. Parks, Louisiana, Mo.; Mr. and Mrs. J. N. Mathews, Hannibal, Mo.; Mr. and Mrs. T. B. Anderson, Memphis, Tenn.; Mr. and Mrs. F. M. Atwood, Memphis, Tenn.; S. M. Field, Little Rock, Ark.; J. E. Martin, Springfield, Mo.; O. A. Reynolds, Springfield, Ill; J. Bart Johnson, Jacksonville, Ill.; R. D. Worrell, Mexico, Mo.; C. W. Love, Rolla, Mo.

Manager Gressing, Mr. Cummins, Mr. Thompson and the entire force of the St. Louis Talking Machine Co., did all in their power to make the stay of their visiting dealers and their wives a most pleasant and agreeable one, and that they thoroughly succeeded was evident from the many words of appreciation expressed by the gentlemen and ladies upon leaving for their homes.

E. B. Walthall, manager of the Columbia Phonograph Co., reports that they had a good wholesale trade for the past month and that their retail trade is increasing and getting back to the status before the panic. Mr. Walthall made a business trip to Chicago recently.

W. C. Fuhri, district manager of this company, with headquarters at Chicago, was here recently.

W. S. Spear, chief accountant of the Columbia Phonograph Co., here, returned on Sept. 27 from a two weeks' vacation, spent in Omaha and Lincoln, Neb., and at Villisca, Ia. This concern recently received their first consignment of mahogany and oak library table Grafonolas and they aroused a great deal of interest among their callers. They expect a heavy sale on these handsome creations.

R. R. Souders, manager of the Columbia Phonograph Co., Dallas, Tex., was a recent visitor here on his way home from a week's vacation, spent in Chicago.

D. K. Myers, the well-known Zonophone jobber, Mr. Knight, of the Knight Mercantile Co., and Marks Silverstone, president of the Silverstone Talking Machine Co., report trade as improving steadily. Miss Blanche Silverstone, manager of the sales department of this concern, is home from a three months' trip through the East.

H. J. Berlin, well and favorably known in music trade circles, has been appointed manager

H. J. BERLIN.

of the talking machine department of the J. H. Buettner Furniture and Carpet Co. This firm moved into their new store at the northwest corner of Washington avenue and North Seventh street on Oct. 2. Their talking machine department, which is a very finely arranged one on the fourth floor, has been described in these columns. They will give high-class concerts in their large recital hall, commencing at an early date.

S. M. Field, of S. M. Field & Bros., Little Rock, Ark., arrived here on Monday, Sept. 27, and stayed two weeks, which included the week of the centennial anniversary of the city. This is the only exclusive talking machine store in Arkansas. They handle the Victor and Edison lines. Mr. Field reported the business outlook in his territory to be very good and he looks for a big fall and winter trade. He reports a strong demand for high class machines, and the inquiries for the best goods to be the best he has known since he has been in the business. Mr. Field has been giving some high class Auxetophone concerts at the leading hotels and other places in his home city, and states that at one given by his firm he had an audience of over 1,000 people.

The Koerber-Brenner Music Co. report their talking machine business is improving rapidly.

The Thiebes-Stierlin Music Co. inform The World man that they have had an excellent trade on high-class machines during the past month, and that the outlook is good.

The Portland Talking Machine Co., Portland, Me., have given up their Victor jobbing business and will in future devote themselves to retailing Victors exclusively at their store at 418 Congress street. Cressey & Allen, Portland, and M. H. Andrews, Bangor, are now the only Victor jobbers in Maine.

TALKING MACHINE SUPPLY COMPANY

400 Fifth Avenue, New York

THE EDISON AMBEROLA.

This New Creation of the National Phonograph Co. Has Excited the Keenest Interest in Talking Machine Circles—Those Who Examined the Amberola Speak in the Highest Possible Terms of Its Musical Qualities and Careful Construction—Is Destined to Prove a Big Seller This Fall.

While the formal preliminary announcement, relative to the Amberola, the new concealed horn cabinet of the National Phonograph Co., Orange, N. J., issued by F. K. Dolbeer, general sales manager, appears on another page of this issue of The World, a more detailed description is given in the appended account that appears in the current number of the Edison Phonograph Monthly, to which credit for the accompanying illustrations is also due.

"The Amberola is the product of a popular demand, equally as insistent and emphatic as prevailed before the Fireside and new combination Gem were produced, although emanating primarily from an opposite source. Jobbers and dealers have long and persistently urged upon us the necessity of putting in their possession a machine with which they could appeal to that portion of the music-loving public whose incomes would permit them to purchase a high-grade machine

AMBEROLA MISSION OAK FINISH (OPEN)

that combined utility and perfection of tone reproduction and projection with the highest ornamental effect.

"It was pointed out to us that with such a machine they could approach a trade that either would not be interested in the present type of phonograph because of a prejudice formed by hearing some of the types that at first brought the instrument into disrepute, or that, if interested, preferred a high-grade instrument that would harmonize more thoroughly with the home surroundings. We felt the force of the arguments and set our experts to work to devise an instrument that would meet all requirements.

"The result is the Amberola. It is not the creation of a week or a month; it is the result of patient, intelligent effort on the part of men who are pioneers in the details of phonograph manufacture. We are proud of the Amberola, for we feel that we have given to the public a phonograph that will appeal with irresistible force to the discriminating music-lover and will emphasize the exalted position that the Edison phonograph has assumed in the realm of musical instruments. It is an Edison product and fully maintains the standard that name demands. It carries the guarantee of excellence in every respect that accompanies Mr. Edison's name.

"The distinctive features of the Amberola are its combination of mechanical excellence (which

AMBEROLA MAHOGANY (PIANO FINISH)

means that it is a perfect musical instrument) with originality of design, grace of contour and perfection of style and finish. It is a concealed horn machine with a highly artistic and useful record cabinet.

"The cabinet is finished in either mahogany (piano finish) or mission oak. It is mounted on patent roller castings. Four drawers equipped with special clamps in bottom accommodate one hundred and twenty standard or Amberol records in original cartons. Its dimensions are: height, 49 inches; width, 21 inches; depth, 22 inches. It is equipped with a traveling mandrel and has a stationary, new-style diaphragm reproducer. It has also an automatic stop and a combination starting lever and reproducer lift. By lifting this lever the feed nut is released and sapphire raised for return of the mandrel and removal of the record. When lever is pressed down the sapphire is lowered to a contact with the record and the motor is also started. The motor is of improved type."

Those who have heard the Amberola pronounce it a high-class product in every sense of the word, a credit to the National Phonograph Co., whose

AMBEROLA MISSION OAK FINISH (CLOSED)

entire line represents in every detail the highest development of the phonographic art. As an article that will increase the sale of the phonograph and add materially to the trade's profits is also conceded by prominent jobbers and dealers.

AMONG THE NON-BELIEVERS.

Claim to Have No Faith in Advertising, but Their Actions Belie Their Words.

"I don't believe in advertising," said the treasurer; and then he sat down and wrote to his best friend, telling him what he was doing in a business way and what he expected to do.

"I don't believe in advertising," said the president; and saying good-by to the caller, he took up the thread of the speech he was preparing to deliver to a buyers' association.

"I've heard my husband say he doesn't believe in advertising," said the president's wife; then she carefully penned a note to the society editor tipping off the coming-out party of their eldest daughter.

"I don't believe in advertising," said the sales manager; and then he hustled the last of his salesmen off on a handshaking trip. "It's between seasons, but you boys might as well keep in touch with the trade."

"I don't believe in advertising," said the secretary; and then he dictated a letter to the Charity Ball Association, inclosing a donation that would put the firm's name near the top of the list.

"I don't believe in advertising," said the silent partner; and excusing himself he called up the local paper to say that his name was spelled S-m-y-t-h-e, and that he generally wrote his name out in full.

"I don't believe in advertising," said the vice-president; and then he carefully counted the advantages that owning the swiftest yacht would give him, says the Cosmopolitan.

"We don't believe in advertising," said the board of directors; and adjourning, they hustled to their clubs, the golf links, and two went abroad, which item the papers heralded.

"Intelligent advertising is a proposition that enables a man to become rich with the help of the multiplication table. The manufacturer or business man can establish universal demand for his product with the aid of advertising, and sales can be multiplied in direct proportion to his advertising."

A few years ago, when modern advertising scarcely existed, a merchant's success depended on mouth to mouth praise, or on the number of people that passed his door, or on the number of clerks that he could hire to go out and talk about him.

If a man sent out circulars with a one-cent stamp to 2,000,000 families, or sent mere postal cards, that would cost him $20,000 for postage alone, allowing nothing for the expense of writing or mailing.

And if a man tried to send his clerks to such a number of families, even though the clerks were paid only a dollar a day, it would cost at least $200,000 to do the work.

Every intelligent American must be interested in advertising; for be sure of this—that if you ever succeed you will need to know about advertising. And if you don't know about advertising your success will never be more than a small fraction of what it might have been.

UNITED IN SONG, IF NOT IN MARRIAGE.

The presence of Geraldine Farrar, the distinguished soprano, and Antonio Scotti of the Metropolitan Opera Co., in Philadelphia, Pa., last week gave rise afresh to rumors that these distinguished artists were in the city to be married. As a matter of fact, both singers were in Philadelphia on their way to Camden for the purpose of making new records for the Victor Co. Here their voices were united in song and in praise of the Victor, if not in marriage.

Why doesn't some genius start a correspondence school of experience?

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Oct. 9, 1909.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

September 9.

Bahia, 18 pkgs., $902; Batavia, 3 pkgs., $108; Buenos Ayres, 36 pkgs., $912; Havre, 7 pkgs., $157; Leicester, 50 pkgs., $325; Limon, 4 pkgs., $162; Liverpool, 50 pkgs., $325; London, 1,452 pkgs., $11,707; Manchester, 1,743 pkgs., $25,739; Newcastle, 24 pkgs., $156; Para, 3 pkgs., $264; Southampton, 4 pkgs., $600; Sydney, 5 pkgs., $285; Tampico, 8 pkgs., $253; Trinidad, 13 pkgs., $195; Valparaiso, 13 pkgs., $681; Vera Cruz, 30 pkgs., $852.

September 16.

Colon, 3 pkgs., $4,393; Havana, 44 pkgs., $1,892; London, 3 pkgs., $118; Manila, 75 pkgs., $4,485; Santo Domingo, 11 pkgs., $352; Trinidad, 6 pkgs., $207; Yokohama, 4 pkgs., $189.

September 23.

Amapala, 1 pkg., $138; Belize, 7 pkgs., $154; Berlin, 6 pkgs., $225; Brussels, 30 pkgs., $250; Buenos Ayres, 40 pkgs., $370; Cape Town, 23 pkgs., $2,339; Guatemala, 3 pkgs., $158; Guayaquil, 2 pkgs., $130; Havana, 23 pkgs., $1,807; 8 pkgs., $306; Lima, 4 pkgs., 284; London, 9 pkgs., $668; 667 pkgs., $7,535; Maracaibo, 1 pkg., $119; Montevideo, 2 pkgs., $131; Para, 5 pkgs., $486; Rio de Janeiro, 18 pkgs., $624; Vera Cruz, 40 pkgs., $950.

September 30.

Berlin, 7 pkgs., $120; Buenos Ayres, 24 pkgs., $3,720; Christiansted, 35 pkgs., $219; Havana, 11 pkgs., $379; Hong Kong, 12 pkgs., $199; London, 2 pkgs., $108; 364 pkgs., $6,994; 8 pkgs., $1,300; Montevideo, 53 pkgs., $4,600; Para, 19 pkgs., $780; Rio de Janeiro, 10 pkgs., $542; 28 pkgs., $3,400; Sydney, 2 pkgs., $164; Trinidad, 3 pkgs., $144; Vera Cruz, 306 pkgs., $8,758.

October 7.

Berlin, 15 pkgs., $427; Berwick, 18 pkgs., $200; Buenos Ayres, 99 pkgs., $9,507; Cabia, 3 pkgs., $135; Guayaquil, 1 pkg., $127; Havana, 3 pkgs., $103; 11 pkgs., $300; Havre, 5 pkgs., $162; London, 12 pkgs., $1,552; 2 pkgs., $191; 45 pkgs., $16,602; Santos, 4 pkgs., $364; Tampico, 21 pkgs., $1059; Valparaiso 8 pkgs., $289; Vera Cruz, 78 pkgs., $2,230.

The Powers Co., engaged in a moving picture proposition, have surrendered their offices in the New York World building. P. A. Powers, of Buffalo, N. Y., financed the enterprise, with C. V. Henkel as general manager.

CONDITIONS IN THE NORTHWEST.

Trade Not as Active as Hoped for at This Season—Dealers Must Soon Arrange to Stock for Holiday Trade If They Desire to do Business—Lucker Visiting Eastern Factories—Graphophone Outfits Popular—Other Items.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, Oct. 7, 1909.

The general trade has been only fair in the past weeks and the dealers hardly know how to account for it, as the fall trade ought to be booming, particularly in the wholesale line. The retail trade has been holding out very nicely, and no fault is to be found in that direction, but jobbers think that they ought to be placing more goods in the country.

Lawrence H. Lucker, of the Minnesota Phonograph Co., has gone East to visit with the Victor and Edison officials. He expects to be gone about two weeks. His company will open a branch store in St. Paul in about two weeks.

J. H. Wheeler, of the Columbia Phonograph Co., has all the business that he can attend to. The best seller is the $45 graphophone outfit, but the higher grade goods find a ready sale. The time for cheap instruments and records is past, and the talking machine business in the twin cities has been established on a firm basis.

Frank J. Weyel, who looks after the Dictophone business in the twin cities, is just a little busier than Mr. Wheeler. About 900 outfits have been placed in the twin cities, and they are coming to be regarded as indispensable in the larger business houses and law offices.

WHO OWNS SALESMAN'S TRADE?

Employer Has No Redress When Salesman Takes Trade to Another House Unless Protected by Written Contract.

Who is the owner of the trade worked up by salesmen? This is a question which has presented itself thousands of times to merchants employing outside salesmen. Has the salesman a legal right to go to another employer and take his trade with him, or, to state it differently, has the first employer any legal redress if the salesman attempts to transfer his regular customers' trade to his new employer? As everybody in business knows, this situation has arisen hundreds of times; in fact, one of the chief assets of a salesman desirous of changing his connection is the trade that he hopes to take with him. To guard against this chance of loss, many employers to-day require their salesmen to sign agreements not to solicit their old customers for a certain time after severing their connection. These contracts, under certain conditions, can be enforced through the courts, says the Furniture World. The employer who makes no such contract, however, is by the great weight of legal authority helpless. His salesmen can do as they like without molestation.

Generally speaking, however, the courts do not favor such contracts, because in a sense they are agreements in restraint of trade and are considered against public policy. A contract by a salesman that for a given time he will not work among the old customers of a certain specified territory is, generally speaking, not favored, for two reasons:

First, it deprives the public of the benefits of the competition which would arise if he did work among them, and,

Second, it deprives himself of a part of his right to earn a living by legitimate effort.

Nevertheless, the courts consider the employers' side of the matter so far as to enforce such a contract, provided it goes no further than the necessary protection of the merchant. If it goes beyond that it will not be enforced.

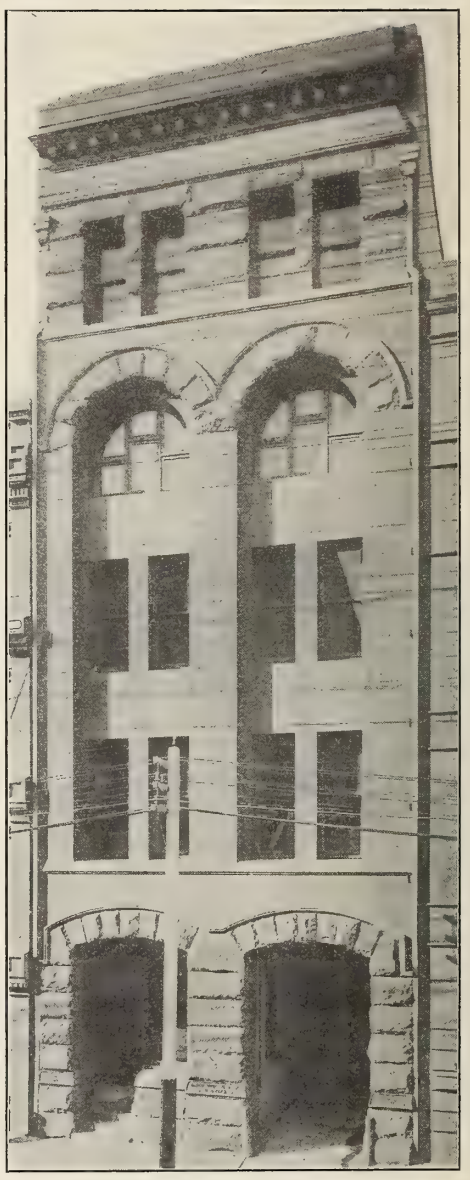
If you are naturally tasty about arranging goods, cultivate the faculty. Get the privilege of dressing the windows and study the art until it becomes a second nature to get up attractive displays.

NATIONAL CO. IN AUSTRALIA.

Conduct Business in the Antipodes as a Separate Corporation with Headquarters in Sydney—Entire Building Pictured Herewith Is Used by the Company—Occupy Four Other Buildings in That City.

The business of the National Phonograph Co., Orange, N. J., in far-away Australia is growing amazingly. It is carried on by a separate corporation, namely, the National Phonograph Co. of Australia, Ltd., with headquarters at 340 Kent street, Sydney, N. S. W., shown in the accompanying half-tone cut. The entire building is used by the company, but only the small signs, hardly discernible in the view, appearing on either side of the doorways on the lower floor, would indicate that such is the case. The first and a part of the second floor are used as offices, the remainder being employed to carry a great stock of Edison records. The equipment throughout is of the latest and most modern type.

This is only one of four buildings occupied by the company in Sydney. Opposite 340 Kent



EDISON HEADQUARTERS IN SYDNEY.

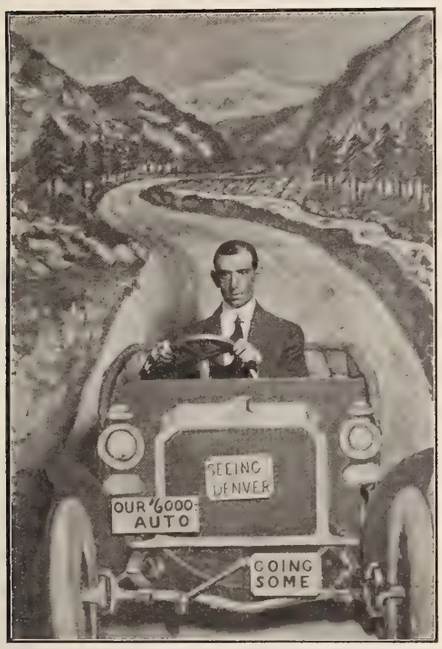
street is a five-story building, in which machines are temporarily stored. Besides, they have a four-story building on another street for storing records, and still another on a third street for storage. With this demand for constantly increasing capacity in which to transact their marvelously growing business, the National Phonograph Co. of Australia have about completed arrangements and accepted plans for the erection of a special building large enough to accommodate their entire interests under one roof in that part of the world.

There are no snaps in the business world. Any time that you have spent in looking for one is so much wasted out of the limited supply available for making success.

HOW LANDAY VISITS THE TRADE.

The Genial Max Was Snapped While Calling on the Trade in Denver.

Max Landay, of the Talking Machine Supply Co., New York, now calling on the trade at large, when in Denver, Col., recently was pictured as



MAX LANDAY SNAPPED IN DENVER.

shown in cut herewith. Max says he is obliged to use a machine in order to get around in time and see everybody. He is a hustler and the orders received prove this beyond a doubt.

MOTION PICTURE OF THE HUNT.

Bear Hunt Arranged by Frank Dickens for the Purpose of Bringing Colorado Into the Public Eye Through the Medium of the Motion Picture—Something of the Development of Plans and Execution of Details.

(Special to The Talking Machine World.)
Marble, Col., Sept. 30, 1909.

The extent to which moving picture men will go to obtain new subjects for illustration was shown recently when twenty-five mounted men, with a well-provisioned pack train and a hundred hounds, left here on what promises to be the most unique and exciting bear hunt ever held in the West—if not in the entire breadth of the globe.

It outdoes the famous Roosevelt hunt in Colorado and will prove an even greater advertising medium than was derived from the former President's visit to the fastnesses of the Rockies. This for the reason that a moving picture operator—Edwin S. Porter, representing the kinetoscope department of the Edison Co.—is to take a motion photograph of the hunt to be reproduced in the thousands of moving picture houses throughout the world.

It was Frank Dickens, famous mountain scout and pathfinder, who conceived the idea of this bear hunt. Mr. Dickens is a Coloradoan who believes in advertising his State. He is heavily interested in Marble holdings, and is closely connected with the workings of a local marble company. He thought that a moving picture of a bear hunt in the mountains hereabouts would bring this section of Colorado into prominence. The Edison people way back in New York thought that such a picture would be more than well worth while. But they expressed a decided opinion by mail to the effect that it would be impossible to get such a photograph. None had ever been taken and it seemed to them that none ever would be secured, they wrote.

Then Mr. Dickens called to his assistance G. F. Stodghill, a business associate, and proceeded to get busy. When they had completed their plans and submitted them to the New York people the latter wired an acceptance. Then Mr. Porter, the best known and most expert of the company's operators, was sent to Marble to take the picture.

In the meantime Mr. Dickens and Mr. Stodghill had arranged all the details. This meant the enlistment of twenty-five men, all trained mountaineers and all experienced bear hunters. It meant, also, the establishment of a camp in the bear country, over on the Big Muddy, about twenty miles from Marble. Mr. Dickens owns the finest pack of trained hounds in this section, and he secured other packs to join his.

The next step was to corral a few bears in the underbrush near the camp site. This was done the early part of the present week, and a guard stationed about the thicket. A blazed trail has been made for the hunters to follow, and an open space has been cut out in the timber for the picture man.

It is planned to turn the hounds loose in the thicket where the bears are now surrounded. The men and dogs will then drive the animals toward this opening. Mr. Porter will be there to take a moving picture of the finish fight. He is taking desperate chances because the bears may decide to go after him and his machine. But he says that it is a part of his business to take risks of personal injury, so he is not afraid.

It is the purpose of the hunters to permit one of the three bears now under patrol to escape by a trail leading to another thicket, which is to be surrounded until the picture machine can be moved to the banks of the swift flowing Big Muddy, half a mile down the mountain. Then Mr. Bruin will be headed for the creek.

Experience has taught these sturdy sons of the mountains that a bear when pursued will make for the water if a stream is near. It is therefore expected that this shaggy big beast of the Rockies will make a wild dash for the miniature river and then swim across—with the moving picture man grinding out film all the while.

Every rancher, miner, hunter, guide and farmer within a radius of fifty miles of Marble has planned to attend the hunt as spectators. The party will be in the camp from three to five days.

THE IMPROVED VICTOR I

Placed on the Market October 1—Many Important Improvements Embodied in This Creation.

The Victor Co. announce their improved Victor I, embodying the following changes: First, a stronger and better motor; second, a better-designed cabinet; third, a larger tapering arm, thus making the assembled instrument one of the most complete and, at the price, one of the most attractive propositions in the Victor catalog.

In this connection the Victor Co. state: "Our stock of the old-style Victor I has been completely exhausted, and statistics gathered by us show that stocks throughout the country have been reduced to a minimum. Therefore, this announcement, coming as it does just in advance of the big holiday season, is most opportune. We expect to begin shipments about September 20. October 1 shall be the 'simultaneous opening day' for shipment of the new Victor I to dealers. The 'simultaneous opening day' for the sale of this instrument to the consuming public shall be October 5, and no sale or display should be made previously."

LIN-O-TONE HORNS GROW IN FAVOR.

The Pardee-Ellenberger Co., of New Haven, Conn., are doing a nice business with their Lin-o-tone horns, both amplifying and recording; folding boxes and other specialties. They sell direct to the jobber and refer all dealers' inquiries to them. Their representative, F. H. Silliman, is about to start on an extended trip, going as far west as Kansas City and down into Texas, calling on all the leading jobbers through this territory.

Arguments that may land one customer, won't always go with another.

THOMAS H. MACDONALD ELECTED A DIRECTOR

Of the American Graphophone Co.—An Honor That Is in Every Respect Well Deserved—Will Now be Able to Concentrate on Big Inventive Problems—A Man Who Has Given the Most of His Life to the Perfection of Talking Machines and Records—Horace Sheble Has Been Appointed Factory Manager of the American Graphophone Co.

The election of Thomas H. Macdonald as a director of the American Graphophone Co., which was announced last week, and the fact that he is to be hereafter relieved of the detail of factory management and permitted to concentrate on the big inventive problems in connection with the perfection of talking machines and records, were the chief topics of interest in trade circles.

Mr. Macdonald has been connected with the Graphophone Co. for the past twenty years, during which time he has been actively engaged as manager of the big plant at Bridgeport, Conn. He has seen it grow from a small establishment where a few men were employed until now it is one of Bridgeport's leading industries and one of the largest factories in the world devoted exclusively to the manufacture of talking machines and records.

THOMAS H. MACDONALD, NEWLY ELECTED DIRECTOR OF THE AMERICAN GRAPHOPHONE CO.

In the development of the graphophonic art Mr. Macdonald's achievements have been brilliant and his patents are of great importance. A man not given to exploiting himself or his work, but absorbed in and as a part of the Graphophone Co.'s organization, he has nevertheless been among the most prolific inventors of actual improvements, and the story of the talking machine since it began to go into the home is in a great measure a story of Macdonald's persistent, painstaking and thorough work.

A great believer in the future of the industry, he was ever engaged in the work of improving and bettering the machines and records.

It was Macdonald who invented the first clockwork motor ever used in a graphophone, and today, as everyone knows, the use of clockwork mechanisms in talking machines is universal. It was Macdonald who invented the duplicating machine for mechanically transferring wax cylinder records from a master record to a blank and made their sale at reasonable prices possible, and it was Macdonald who in later years invented and used commercially a process of molding cylinder records from a permanent metal matrix.

It was Macdonald who invented the graphophone grand in 1888, which was hailed with delight by the whole world at the time because of the marked improvement obtained in the reproduction; and for this he was awarded the Franklin Institute medal. Year after year the records of the United States Patent Office disclose patent after patent issued to Thomas H. Macdonald in the talking machine field, so that his work is dominating and his position unquestioned.

In chatting with an officer of the American Graphophone Co. this week on Macdonald's achievements he said: "Time after time, in interference suits with Edison in the United States Patent Office, Macdonald has been the victor, and in like manner when the courts have been called upon to decide cases involving his inventions in his various clashes he has also been victorious."

It is worthy of note that the International Jury at the St. Louis World's Fair awarded a gold medal to Mr. Macdonald for his work as collaborator with the American Graphophone Co.

Under the new arrangement Mr. Macdonald will be able to devote all of his time to experimenting and to perfecting inventions on which he is now engaged, being relieved of the enormous detail incident to factory management.

Horace Sheble, for many years in charge of the manufacturing department of Hawthorne & Sheble Manufacturing Co., has been appointed factory manager of the American Graphophone Co.

BLACKMAN CO.'S ACTIVITY.

Sales Force Increased and Everyone Hard After Business—Larger Stock on Hand—Good Demand for Needles and Record Trays.

The Blackman Talking Machine Co., New York, who exuded optimism from every pore, even when the outlook was darkest, now that prosperous times are actually returning, are out after business in vigorous style. Their sales force has been increased, and the members of the company, J. Newcomb Blackman, George G. Blackman and R. E. Caldwell, are also hot on the trail of the dealer.

J. N. Blackman recently made a flying auto trip, accompanied by his brother George, over the latter's territory in the southern part of New York State. Starting from Orange, N. J., the party went direct to Port Jervis, N. Y., and worked back, covering over 100 miles the first day, when twelve dealers were visited, and 173 miles on the second day, calling on fourteen dealers. Needless to say very little time was wasted en route.

The Blackman Co.'s quarters, being newly decorated throughout and containing a greatly enlarged stock of goods, present an appearance of activity on all occasions. During the recent celebration the show windows and exterior of the building was handsomely decorated, over a dozen large American flags alone being used, besides bunting and special flags.

The Playrite and Melotone needles and folding record trays controlled by the Blackman Talking Machine Co. continue to find favor with both dealers and the public, and through energetic exploitation their popularity is steadily on the increase.

SOME INDIVIDUAL FEATURES

Embodied in the Rockford Cabinet Illustrated in This Issue of The World.

In the advertisement of the Rockford Cabinet Co., Rockford, Ill., which appears on page 15 of this month's issue of The World, will be found an illustration of one of their new style disc cabinets, which has won a large measure of favor from dealers and purchasers alike. As will be noted, the interior of this cabinet is automatic in a way, as it is drawn out with the opening of the door, and this brings out the full interior outside of the cabinet, which is consequently much easier of access. The cabinet is admirably finished and by reason of the especial features embodied it is worthy the consideration of dealers desiring something out of the ordinary as a factor in their business. The Rockford Co. have a large number of new styles ready for the trade this year, and illustrations of these cabinets can be had on application.

AN OLD ONE IN NEW DRESS.

"I'm introducing a brand new invention—a combined talking machine, carpet-sweeper and letter-opener," said the agent, stepping briskly into an office.

"Got one already," answered the proprietor, "I'm married."

RECORD BULLETINS FOR NOVEMBER, 1909

COLUMBIA 10-INCH DOUBLE DISC RECORDS

No. 518. Cylinder Record Cabinet
Holds 150 Cylinders in the Original Flannel Lined Cartons. Golden Quartered Oak

You are right if you buy Udell Cabinets. We are the Cabinet people and our Cabinets on your floors will make you more money than any others.

Why? you ask.

1st—Because we make Cabinets in such large quantities that we are able to put a price on them that is so reasonable that you can add on a good margin and your trade will pay it.

2nd—Because every Cabinet is made and finished as if it was going in the White House.

3rd—We have so many patterns that all can be satisfied.

4th—Our New Catalog has fairly taken the trade by storm and on every mail we are being complimented, not only because the book is so beautifully designed and printed, but because it *Helps* the Dealers sell the Cabinets it illustrates.

You will receive one of these Catalogs showing 96 Cabinets from $4.00 to $32.50 for Disc Records, Cylinder Records, Sheet Music and Piano Player Rolls if you but write

COLUMBIA CO. IN WASHINGTON

To Occupy New and Larger Quarters at an Early Date in the Capital City.

The Washington, D. C., store of the Columbia Phonograph Co., is preparing to remove into new and larger quarters. The change will be made before the middle of the month, and H. A. Yerkes, manager of the Columbia's wholesale department at the executive offices, will arrange and model the premises in accordance with plans that have given the greatest satisfaction in several other eastern cities, and which have been carried out under his personal supervision.

SILVERMAN WITH UNIVERSAL CO.

Louis Silverman, well known in the metropolitan talking machine trade, is now with the Universal Talking Machine Mfg. Co., Newark, N. J., covering the field in the Greater New York territory. Mr. Silverman's past connections equip him as one of the up-to-date, thorough-going salesmen, and reports of his work for the Zonophone line bear out this reputation.

General Manager Mainabb desires to notify the trade that the Universal Talking Machine Mfg. Co., Newark, N. J., will make no advance in price on any size of Zonophone records on account of royalty charges for copyright music. This extra cost the company will assume, and therefore the current prices for records will remain unchanged. Also, there will be no curtailment in the number of selections or the range of repertoire because of the copyright exactions.

TRADE FABLE

No. 2

There was once two brothers who were familiarly known as Bill and Jim. Since they first mastered the art of standing on their pins, Bill had always walked the straight and narrow, while Jim had been under the sad necessity of raising Hell enough to keep the whole family supplied, and the way in which he kept up the average was creditable from an unbiased standpoint.

After being put through the regular college course, including all the frills on the calendar, by an indulgent Old Man, the two brothers secured jobs in the office of a big Talking Machine house, where Bill's strict attention to business, his phenomenal accuracy in figures, and his natural frugal and cautious mode of living endeared him to the heart of the Boss.

Jim did not fare so well, however, and the Boss cast many an angry glance at the clock each morning before Jim would materialize, a half an hour late, with his derby worn at an angle corresponding to his cigar, and begin talking about yesterday's race to the office force. For some time the Boss had been thinking of giving Jim the High Sign to seek another office where he could hang up his fancy vest in the mornings, but the friendship that existed between him and Jim's father always intervened in the latter's favor.

One afternoon while ensconsed in a leather chair in his private office listening to an enthusiastic account of some new burlesque show which Jim was amusing the office force with, the Boss got a bright idea.

"At last I will have peace in the office," mused the Boss, frowning heavily at hearing the conversation still going on, "I'll send the Sporty One out on the road and while he is gone I will fill his position so that I can let him down easy on his return by facing him with the few sales he may make, and gently but firmly give him the G. B."

About this time Bill, who had been conscientiously plugging along, decided to get married to the rich and ugly daughter of a local coal dealer, and in order to strengthen his suit for her hand, was desirous of becoming a salesman for the house so that his weekly stipend would undergo a change for the better. With an inwardly quaking heart Bill braced the Old Man, who did not have the nerve to refuse him.

It so happened that both brothers left the Home Plate on the same day to benefit mankind by placing the firm's machines in every hamlet in their respective territories.

"Ah," sighed Bill, as he swung into a day coach and bit a large chunk from a cheese sandwich, "my mode of living will enable me to reduce my expenses to a minimum, and my sales will be all velvet. On my return, covered with glory, I will intercede for my foolish brother and fix it so that he will not be turned away without another chance. If he only was like myself what a glorious future would be his."

From another part of the station Jim swung aboard a gilded Pullman and promptly fell in with a whiskey agent. There was plenty doing on board that night. Every town Jim stopped at remembered him for many a day. The leading buyers had a habit of waking up mornings to see pale pink lizards crawl over the transoms, and recollect in a hazy way signing an order book.

On the Home Stretch Jim left a trail of empty bottles that stretched from Chicago to New York. At the Grand Central he met Bill who was hustling off to the office to report his sales. Jim leisurely hied himself to a Taxi and went to the nearest Turkish Bath to sweat out lingering traces of Western booze.

Bill arriving at the office safely, approached the Old Man and opened up as follows:

"Boss, I know that you have decided to make me a partner. My exceptional sales and insignificant expense account justify your decision, should that be necessary, but before you heap wreathes of praise and glory on my deserving brow, allow me to intercede for my foolish brother. Give him another chance. I'll have a private chat with him and hand him some points that will be beneficial to him on his next trip. Now I'm ready! Turn on the calcium." (Here Bill assumed a Washington crossing the Delaware attitude and waited.)

"Bill," said the Boss, giving him a peculiar look, "I had decided to fire you before you came in this afternoon. Now that I've heard what you had to say, however, I've come to the conclusion that the recent muggy weather has affected your thinking apparatus. That brother of yours is the hottest piece of broadcloth that ever lugged a catalog. The business you turned in looks like a peanut compared to his sales. The manner in which he drew on the house was certainly, I'll admit, fierce, but he certainly sold the goods. We now have orders on hand that will keep us busy at the top notch until six months from now. I'm waiting for him to come in and sign a contract with us at his own terms. Out of respect to your brother you can have your old job back. Good afternoon!"

Moral—It doesn't matter how you do it as long as you "make good."

VICTOR CO.'S SUIT AGAINST GOLDBERG.

The suit of the Victor Talking Machine Co., Camden, N. J., against Joseph Goldberg, a dealer of New York, for contempt of court in connection with price cutting on Victor goods, and which was postponed several times, was decided by Judge Lacombe, Circuit Court of the United States, Southern District of New York, on September 24, when he filed the following memorandum:

"In view of the conflict of testimony as to identity of the person who made the sale, motion to punish for contempt must be now denied. If complainant now decides, it may take an order referring it to a master to take proof as to alleged contempt."

Goldberg had previously been enjoined from selling Victor goods below the contract price.

CREATING NEW COLUMBIA DEALERS.

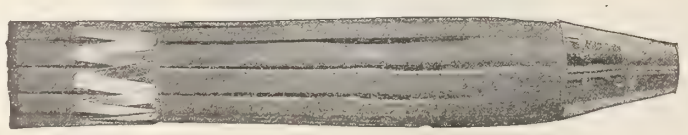
T. K. Henderson, manager of the Columbia Phonograph Co.'s establishment in Philadelphia, is devoting the major part of his time and energies to the wholesale end, and is creating new dealers in the eastern part of Pennsylvania, where he has recently visited a number of the leading places. Mr. Henderson, with his wide acquaintance in the music trade and pleasing personality, has secured some of the strongest representatives for the Columbia in his territory.

Price cards should be used in show windows, also, whenever possible. It attracts the attention of passers-by to the articles displayed.

MUNSON FOLDING HORN

FOR DISC AND CYLINDER MACHINES is the only one-piece indestructible Folding Horn on the market. Made of the finest quality of selected Leatherette—in plain solid colors—Gold, Black or Red, inside and out.

WHEN FOLDED AND CARTONED it occupies a space only 28 inches long by 3½ inches square.



THE MUNSON FOLDING HORN
Greatly improves the tone of the records and means increased record sales. Retails $7.00
Further Particulars and Discount Sheet on Application.

650-652 NINTH AVE. FOLDING PHONOGRAPHIC HORN CO., NEW YORK CITY

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., Oct. 9, 1909.

AUTOMATIC STOP FOR PHONOGRAPHS. Charles A. Rumble, Lowville, N. Y. Patent No. 932,061.

This invention relates to means for stopping sound-reproducing machines when a record has been played and consists of a clip secured to the reproducing arm and carrying an angled rod which is clamped by means of a set screw upon the clip against the reproducer arm and held in an adjusted position, the angled end of the rod being adapted to be positioned in the path of the record.

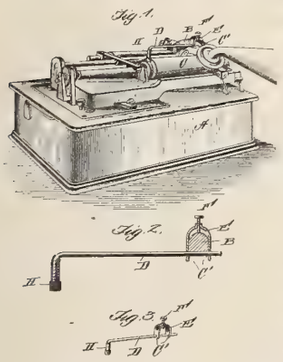


Fig. 1 is a perspective view of a phonograph showing the invention as applied thereto, the device being shown in the position it assumes when it automatically stops the phonograph. Fig. 2 is a sectional view through the reproducer arm showing the stopping device in side elevation, and Fig. 3 is a detail perspective view of the device and a clip for holding the same upon the reproducer arm.

SOUND-MODIFYING MEANS FOR TALKING MACHINES. Ellis S. Oliver, Newark, N. J. Patent No. 932,055.

This invention therefore has for its principal object to provide a simply constructed and efficiently operating sound-modifying means for use with the sound-conveying tube or member of the various forms of cylinder talking machines, which is under perfect control of the operator and can be most easily worked, so that the sounds can be reproduced with modified effects, and especially is this so with the reproduction of musical sounds, as the singing of a person, or a piece played upon a musical instrument or instruments, the pianissimo and forte effects being most perfectly reproduced.

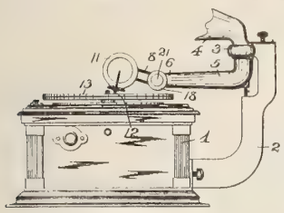

FIG. 1.

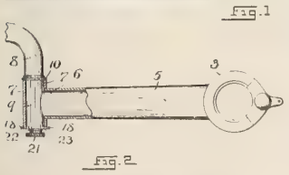

FIG. 2.

Fig. 1 is a side elevation of one form of talking machine and its sound-conveying tube or member leading to the sound-reproducing horn, a portion of which is shown in elevation, said view showing also in end elevation the button or operating member of the sound-modifying means used with said tube. Fig. 2 is an enlarged view of said sound-conveying tube or member, shown partly in plan and partly in horizontal section, with an end portion of the sound-modifying means shown in top view. Fig. 3 is a horizontal sectional representation of the jointed elements of said sound-conveying tube or member, with the sound-modifying means shown in plan within the joint of said elements, and Fig. 4 is a horizontal section, made on an enlarged scale, of said jointed elements, and of the sound-modifying means arranged in said joint, showing one general arrangement of the parts comprising said sound-modifying means. Fig. 5 is a vertical section taken on line 5—5 in said Fig. 4, but made on a still larger scale, said section showing the sound-modifying means in its wide-open position within the jointed elements of the sound-conveying tube or member, and Figs. 6 and 7 are similar sectional representations of the same parts, but showing the sound-modifying means in two of its other positions for modifying the sound.

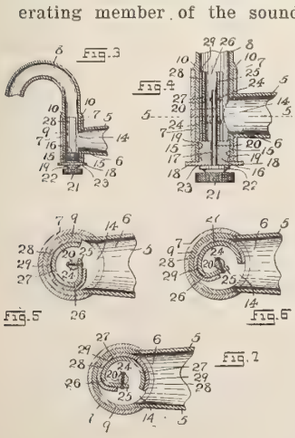

FIG. 3. FIG. 4. FIG. 5. FIG. 6. FIG. 7.

PHONOGRAPH. Herman Wolke, Orange, N. J., assignor to the New Jersey Patent Co., West Orange, N. J. Patent No. 932,222.

This invention relates to phonographs of the type wherein the reproducer or recorder is carried by a traveling carriage which is fed across the surface of the rotating record so as to cause the stylus to trace upon said surface a spiral path, the progressive movement of the carriage being produced by means of a rotating feed screw. In an application filed concurrently herewith Serial No. 350,649, the inventor describes and claims an improved form of feed mechanism adapted to be applied to a phonograph for feeding the movable carriage, by means of which a feed screw is used, having, for example, one hundred threads to the inch and effect a progressive movement of the carriage of only one-half inch for one hundred turns of the feed screw, or one two-hundredth of an inch for one turn.

The object of the present invention is to provide means whereby the movable carriage may be fed at two different rates of speed, as desired, from one and the same feed screw. For instance, with a feed screw having one hundred threads to the inch, the device will permit the carriage to be fed either at the rate of one one-hundredth of an inch or one two-hundredth of an inch for each revolution of the screw, as desired by the user.

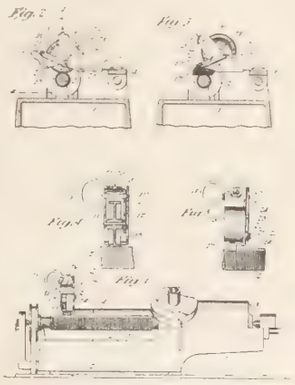

Fig. 1 is a front elevation of a phonograph provided with a feed device embodying the invention; Fig. 2 is a section on line 2—2 of Fig. 1 with the feed device in the proper position for feeding the carriage at the rate of one two-hundredth of an inch per feed screw revolution; Fig. 3 is a section on the safe line as Fig. 2, with the feed device in position for feeding the carriage one one-hundredth of an inch per feed screw revolution; Fig. 4 is a section on line 4—4 of Fig. 2, and Fig. 5 is a front elevation showing the parts in the position of Fig. 3.

PHONOGRAPH. John F. Ott, Orange, N. J., assignor to the New Jersey Patent Co., West Orange, N. J. Patent No. 932,314.

This invention relates to phonographs of the type wherein the sound box is carried on a traveling carriage to which a progressive movement is imparted by means of a rotating feed screw, so that the reproducer or recorder stylus traces a spiral path with respect to the record surface. It has been the usual practice for many years to provide a feed screw of fine pitch which will advance the traveling carriage a distance of one one-hundredth of an inch for each revolution of the mandrel. More recently, however, it has been found possible to manufacture a sound record in which the record groove has two hundred turns or threads to the inch, so that it is desirable to provide a phonograph in which the feed of the carriage will be suitable for operating upon a record of this description. In view of the fact, however, that there are already thousands of phonographs in use in which the feed screw advances the carriage one one-hundredth of an inch per mandrel revolution, and a vast number of records are also in use having a pitch of one one-hundredth of an inch, it is desirable to provide means which may readily be applied to such phonographs whereby the feed screw may be driven at one-half the speed at which it has been heretofore driven, such means also permitting the driving of the feed screw at its usual speed, so that the phonograph can be used interchangeably with sound records having either one hundred or two hundred threads per inch, and the invention has for its object the provision of interchangeable means of this character which may be readily applied to a phonograph and in which, when so applied, the parts may be readily shifted with respect to each other, so as to drive the feed screw at the desired rate of speed.

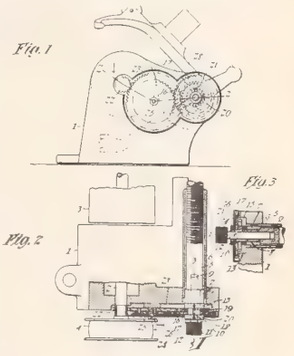

FIG. 1. FIG. 3. FIG. 2.

Fig. 1 is an end elevation of a well-known form of phonograph to which the invention is applied; Fig. 2 is a plan view, partly in section on line 2—2 of Fig. 1, and Fig. 3 is a detail section on line 3—3 of Fig. 2.

SOUND-RECORD MOLD. Jonas W. Aylsworth, East Orange, N. J., assignor to the New Jersey Patent Co., West Orange, N. J. Patent No. 932,237.

This invention relates to various new and useful improvements in sound-record molds, adapted for use in the molding of duplicate records by a spinning process, in which the mold is rotated at a high speed and contains a charge of molten material which is distributed over the record surface by centrifugal force. In actual practice difficulty has been encountered in constructing the ends for the molds in such a way that they will be perfectly tight to prevent the escape of the molten wax-like material, as well as to prevent the entrance of water, which is ordinarily sprayed over the molds to cool the records after the wax-like material has been distributed over the record surface. One of the caps is readily removable, so that after the record is formed it may be taken off to permit the record to be removed from the mold after it has contracted diametrically. The other cap forms practically a permanent fixture and considerable trouble has been experienced in connection therewith, for the reason that when the reaming tool is introduced to finish the interior of the record, it is liable to injure the cap and destroy the joint between the cap and the mold. To overcome these difficulties is used a construction in which a hardened steel cap is used, which in addition to forming a tight joint at the end of the mold, will also act as a stop or gage for the reaming tool, limiting its position not only longitudinally with respect to the record, but also limiting the movement which the reaming tool shall make to define the thickness of the record and its internal diameter.

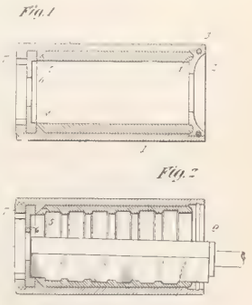

FIG. 1. FIG. 2.

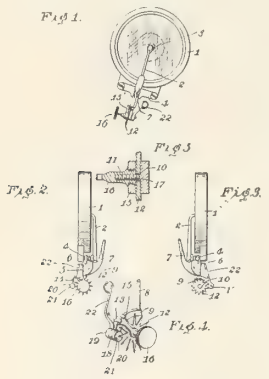
Fig. 1 is a longitudinal sectional view of the complete mold, and Fig. 2 a corresponding view of the same with the end cap removed and showing a record formed in the mold and the reaming tool operating thereon.

NEEDLE HOLDER FOR SOUND BOXES. Minard Arthur Possons, Cleveland, O. Patent No. 931,957.

This invention relates to improvements in needle holders for sound boxes, and the object is to provide a needle holder adapted to support a rotatable needle and said holder adapted to be secured in the needle receiving socket of the sound box.

Another object of the invention is to provide a needle holder of this character which can be made independent of the sound box and secured within the needle receiving socket of the ordinary sound box.

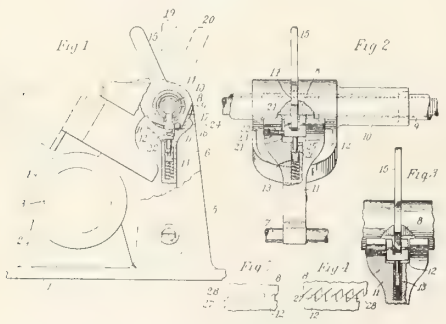
In the accompanying drawings, Fig. 1 is a side view of an improved needle holder attached to the ordinary sound box now in use. Fig. 2 is an edge view of Fig. 1 looking in the direction of the arrow shown in Fig. 1. Fig. 3 is an edge view looking in the opposite direction from Fig. 2. Fig. 4 is an enlarged perspective view of the needle holder as it would be manufactured and sold to be adapted to the ordinary sound box. Fig. 5 is an enlarged sectional view showing the swivel connection of the thumb-nut with the swinging arm.



START AND STOP-MECHANISM FOR GRAPHOPHONES. Thomas H. Macdonald, Bridgeport, Conn., assignor to the American Graphophone Co., same place. Patent No. 934,451.

This invention relates to graphophones or other talking machines, especially of the construction intended to operate interchangeably for recording and reproducing. In these machines there is provided a feed-screw whose thread has one side vertical and the other at an angle to the axis of the screw-shaft, and a similarly-threaded partial nut normally engaging therewith to propel the carriage longitudinally of the record; the start-and-stop mechanism has means for disengaging the nut from the screw, and for causing the two to mesh together again. In order to permit the nut to have sufficient play to permit the meshing, a certain looseness of mounting sometimes occurs, there is also a "back-lash" between the threads of the nut and those of the screw, besides rattling and other objections that will be appreciated by those familiar with the use of such machines.

The object of this invention is to provide means for preventing this back-lash, rattling, etc., without interfering with the efficiency of the machine. Preferably this is accomplished by providing means that, while the feed-nut is being brought into engagement with the feed-screw, will force the nut sidewise to the limit of its play and into proper mesh, in order to prevent the back-lash, and that will hold it there



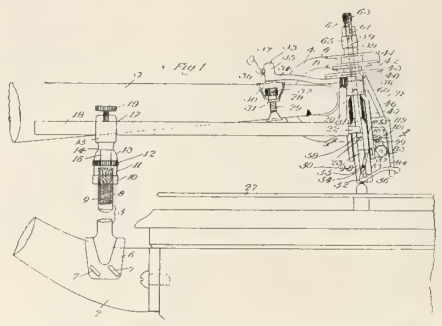
against rattle; and, in combination with this, other means for restoring the nut to its former position when disengaged from the screw.

In these drawings, Figure 1 is an end elevation, partly in vertical section, of a graphophone showing invention; Fig. 2 is a partly broken away rear view of a part of the same, viewed from the right in Fig. 1; Fig. 3 is a vertical section of a detail; and Figs. 4 and 5 are details on an enlarged scale.

STYLUS-REPLENISHING MECHANISM FOR TALKING MACHINES. Guadalupe Buelna and Arthur E. Burson, Santa Barbara, Cal. Patent No. 931,676.

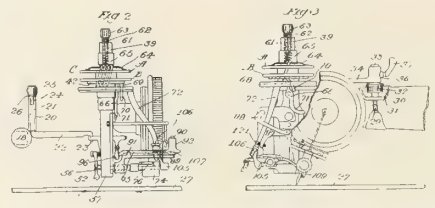
This invention relates to a stylus replenishing mechanism and particularly to such mechanisms for use in connection with talking machines employing disc records.

An object of this invention is to provide a device for this purpose, in which the stylus of a sound-box is caused to be ejected from the stylus



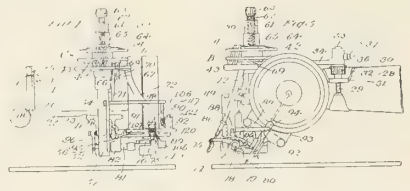
holder, and a new stylus inserted in its stead by suitable stylus setting mechanism.

A further object of this invention is to supply such stylus setting mechanism with a fresh stylus whenever the stylus supplied thereto has been delivered to and inserted in the stylus

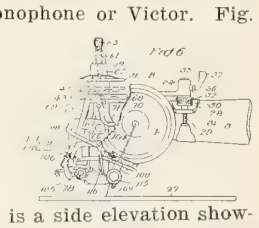


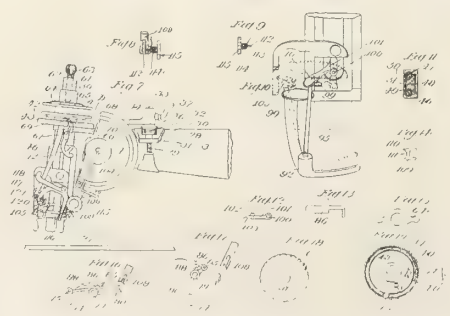
holder, and to so arrange such mechanism that the various functions of the mechanism for carrying out these objects are performed in predetermined succession, all of such mechanism being controlled by the mere movement of the carrier arm for the sound-box of a talking machine.

In the drawings: Figure 1 is a side elevation



of the improved replenishing device, showing the same attached for operation to a talking machine; parts of the view are broken to contract the same. Fig. 2 is a front elevation. Fig. 3 is a side elevation showing the device attached to a talking machine (the sound-box being shown in fragment) and proper mechanism for adapting the replenishing mechanism to such machines known as the Zonophone or Victor. Fig. 4 is a front elevation showing the application of the replenishing mechanism to a Columbia talking machine. Fig. 5 is a side elevation looking to the left of Fig. 4. Fig. 6 is a side elevation showing the application of the replenishing mechanism to a Zonophone or such machines in which the sound-boxes are provided with screws for clamping the stylus. Fig. 7 is a fragmentary side elevation showing the stylus setter in the act of delivering a stylus to the stylus-holder. Fig. 8 is a fragmentary sectional detail of stylus

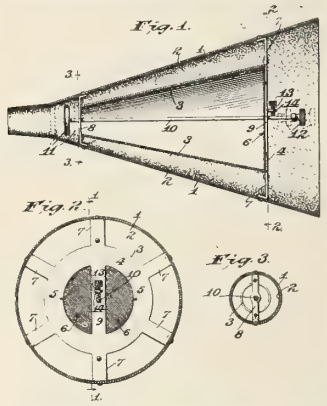




retaining mechanism for Zonophones. Fig. 9 is a detail of the stylus retaining toothed wheel and spring. Fig. 10 is a perspective view, illustrating the mechanism for actuating the stylus clamp to release a used stylus, preparatory to inserting another, the dotted lines indicating the active, and the full lines, the passive position of such mechanism. Fig. 11 is a detail sectional view of the trackway and carriage. Fig. 12 is a detail of the link for controlling the stylus releasing mechanism. Fig. 13 is a detail of the lever for releasing the stylus from frictional hold in the stylus holder. Fig. 14 is a detail of a funnel arranged to be fitted on the stylus holder of a Zonophone sound-box. Fig. 15 is a detail plan of the spring arranged to hold the disc A of the magazine in place. Fig. 16 is a fragmental detail showing position of mechanism for releasing the stylus from the stylus holder, before the actuation thereof. Fig. 17 is a similar view showing the stylus releasing mechanism in position to cause the stylus to drop from the stylus holder. Fig. 18 is a plan view of one of the magazine discs, and Fig. 19 is a plan view of the platform, showing the opening in the delivery chute, the magazine proper being omitted.

AMPLIFYING-HORN. William Tatelbaum, St. Louis, Mo., assignor of one-third to Sigoloff Bros. Hardware Co., same place. Patent No. 931,161.

In the drawings Figure 1 is a longitudinal-sectional view on line 1—1, Fig. 2 of an improved horn, showing the regulating valve in adjusted positions in dotted lines; Fig. 2 is a cross-sectional view on line 2—2, Fig. 1; and Fig. 3 is a cross-sectional view on line 3—3, Fig. 1.



The object of this invention is to produce a horn provided not only with means for regulating the volume of the tone or sound waves, but also with means which eliminate substantially all metallic vibrations from the horn, such later means also spreading and rounding out said tone waves, modulating or modifying the same and making them sweet and distinct.

TALKING-MACHINE. Henry F. Cook, Sag Harbor, N. Y. Patent No. 933,234.

This invention relates to a means by which the movement of the stylus in spiral grooved records is stopped immediately after the stylus has left the record groove in order to avoid disagreeable sounds produced by the stylus scratching on the record carrying body beyond the record groove. In particular it relates to means which are controlled in their stopping operation by the member or arm which carries the sound-box.

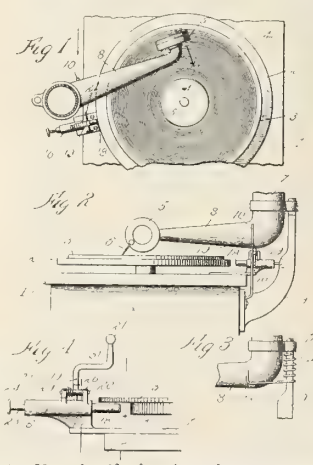


Figure 1 is a plan view of a part of a flat record talking machine. Fig. 2 is a side elevation thereof seen in the direction of the arrow in Fig. 1. Fig. 3 is a modification of the means for yielding by moving the sound-box over the record. Fig. 4 is a side view of the stopping device acting upon the record table after the

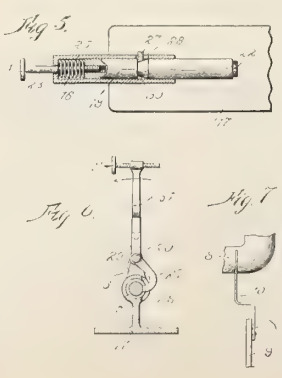


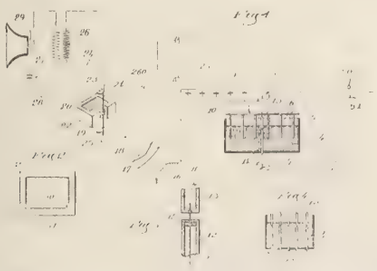
stylus has passed over the record, shown in enlarged scale. Fig. 5 is a horizontal sectional view thereof, in still larger scale. Fig. 6 is a vertical section thereof on line X X in Fig. 4. Fig. 7 is a modification of spring 10 shown in Fig. 2.

METHOD OF RECORDING SOUND-VIBRATIONS. Percy W. Fuller, Boston, Mass. Patent No. 934,600.

This invention has for its object to provide a novel method of recording magnetically sound vibrations so that they may at any time thereafter be reproduced.

It is a fact that when a body containing or coated with magnetizable material is magnetized, the intensity of the magnetism at any point on the body depends on the amount of magnetizable material at this point. This fact is made use of in practicing the improved method, which consist broadly in depositing on a wire, disc or other body, which is preferably of non-magnetizable material, a layer of magnetizable material which varies in thickness at different points along the wire or disc in accordance with the variations of the sound vibrations to be recorded, and then subsequently subjecting said wire or disc to the influence of a magnetic field strong enough to magnetize the magnetizable material to saturation point. Since said wire or disc has a layer of varying thickness of the magnetizable material thereon, the result of thus magnetizing it will be that said wire or disc will have at different points along its length magnetism of different strengths, (this being so because the magnetic strength at any point has a definite relation to the thickness of the magnetizable material on the body at this point,) and the completely magnetized wire or disc will represent a magnetic sound record. When a sound record thus made is passed over the poles of a telegraphone-reproducing apparatus, the sound vibrations thus magnetically recorded on the wire or disc will be reproduced in a well-known manner.

While it is possible to carry out the method in a great variety of ways, there is shown in



the drawing more or less diagrammatically one simple apparatus for accomplishing the desired result, it being understood, however, that the inventor has not gone into detail of the construction of such an apparatus.

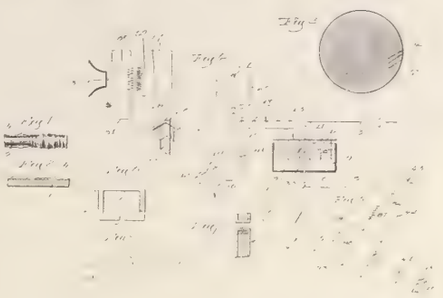
Figure 1 shows diagrammatically one apparatus for carrying out the improved method; Fig. 2 is a detail of a magnet for magnetizing the wire after the magnetizable material has been deposited thereon; Fig. 3 is a detail of the shield for protecting the wire from electrolytic action except at the point where the magnetizable material is to be deposited; Fig. 4 is a section through the electro-plating apparatus on the line x—x, Fig. 1.

SOUND-RECORD. Percy W. Fuller, Boston, Mass. Patent No. 934,601.

There are at present two well-known ways of making permanent records of sounds. One is by making an impression or groove in a body by means of a stylus which is attached to or actuated by a diaphragm that is set in vibration by the sounds to be recorded as is made by a phonograph or graphophone, such as is produced by the telegraphone, and the other is by locally magnetizing successive points of a body by passing said body across the poles of a magnet in which the magnetic flux is varied in accordance with the sound vibrations to be recorded.

The present invention has for its object to provide a sound record which differs from the above-mentioned sound records in that the record of the sounds is represented by a coating or deposit of material applied to a body, which coating or deposit has a characteristic that varies at different points thereof in accordance with the variations in the sound vibrations recorded. Such characteristic may be the thickness of the coating which represents intensity or amplitude of sound vibrations, or may be some other characteristic which represents pitch or quality.

Referring to the drawings, Figure 1 is a view illustrating the principle of the invention when embodied in a sound record applied to a wire; Fig. 2 is a view showing the principle of the invention when the sound record is applied to a body in the form of a disc, both said Figs. 1 and 2 being more in the nature of diagrams than in the nature of actual illustrations of sound records; Fig. 3 is a plan view of a disc having the sound record applied thereto; Fig. 4 is a diagram view showing an apparatus by



which the improved sound record may be formed on a wire; Fig. 5 is a diagrammatic view showing a different method of accomplishing the same end; Fig. 6 is a view showing the operation of permanently magnetizing the wire to form a magnetic sound record; Fig. 7 is a detail of the apparatus shown in Fig. 4; Fig. 8 shows diagrammatically a reproducing apparatus capable of reproducing a sound record when said record is represented by a coating of material having good magnetic permeability.

Referring to Fig. 1, 3 designates the wire or other body on which the sound record is made. The sound record is represented by a coating 4 which is applied to the body 3 and which varies in thickness at different points in accordance with the sound vibrations. Where the body is a wire, the coating or deposit 4 representing the sound record will preferably completely encircle the wire.

This improved record may also be formed on a disc 5, such as shown in Figs. 2 and 3, in which case the sound record would be in the nature of a ridge or line of material applied to or deposited on the disc in the form of a spiral, as shown in Fig. 3. Fig. 2 illustrates a section through the disc, which section is taken along the length of the line of deposit, said figure being for the purpose of illustrating the varying thickness of the coating or deposit 4. The body 3 or 5 may be of any suitable or usual material, but preferably some non-magnetic material, such as copper, although other materials than copper might be successfully used; and this invention is not limited to the use of any particular substance for the body 3, 5. The material of the coating or deposit 4 may also be varied without departing from the invention, although preferably is used either metal capable of being readily deposited by an electro-plating process and capable of being magnetized, such, for instance as nickel, or a metal capable of being readily deposited by an electro-plating process and having good magnetic permeability, such, for instance, as iron.

TELEGRAPHONE. Frederic Schaefer, Wheeling, W. Va., assignor to American Telegraphone Co., of the District of Columbia. Patent No. 934,843.

This invention relates to telegraphones and has for its object the provision of a machine in which the record medium is in the form of a disc rotatively supported and is particularly adapted for commercial work of various kinds, such as the dictation and transcribing of letters, etc.

BUILDING STORE SENTIMENT.

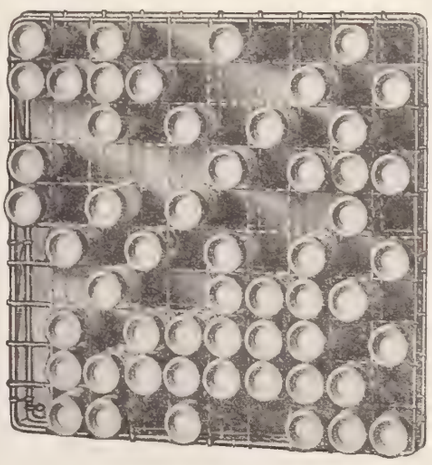
It pays to build up a store sentiment. By that we mean "that intangible but precious element in store keeping which sells the most goods at the best profit." One writer says that a merchant should devote at least fifty per cent. of his advertising, every day in the year, to the creation of store sentiment. When John Wanamaker paid $1,500 for a full page ad with nothing in it but a request to every man who had bought a certain brand of collar to call and get his money back because the collar was discovered to be not as represented, he made an investment in store sentiment that is paying dividends yet.

MULTUM IN PARVO.

The man who permits his pleasure to interfere with his business may reach the point where he won't have any of either.

Extra Profit from Record Sales is Possible

By Selling Record Buyers the HEISE SYSTEM WIRE RACKS



Just the thing for the home. Small Racks for 100 and 150 records made upon the same plan as our store Racks which have proven so popular with dealers.

Compact, convenient and durable. Get in a line in time for fall trade. They mean more record sales, for owners want to see them filled.

AND NOVELTY NEWS

SIDE LINE SECTION

NEW YORK, OCTOBER 15, 1909

THE USE OF PRICE TICKETS.

Veritable "Silent Salesmen" Help to Increase Trade—Obtain Attention of Customers.

Every retail store uses some price tickets. A few stores use many price tickets. Not one retail merchant in a hundred uses enough price tickets. The average store does not use one-tenth as many as it ought.

No store uses "enough" until shoppers can tell the price of every article without having to ask the question. The purpose of price tickets is to interest people in other goods than those which they have decided to purchase.

A dealer who has used price tickets quite consistently says it has saved him the cost of an extra clerk in his store.

The average customer who has plenty of time on his hands likes to wander around a store and look at the various things that interest him. Sometimes he sees an article which he fancies. He examines it and in a few minutes he knows everything about it but the price, for it is not marked. As yet the decision to buy is not strong enough to induce him to ask the price, so he just lets it go. A possible sale has then been lost.

Customers will invariably go to a counter where goods are displayed with a price on them. They see a sign, "Anything on this counter for 50 cents," and immediately they want to see what they can get for 50 cents. Often they will pick up articles and sell it to themselves without any effort on the salesman's part. It is the price card, mostly, which is responsible for the sale.

MEDIUM PRICED WATCHES.

One of the Most Desirable and Profitable Side Lines for the Talking Machine Dealer.

One of the neatest and most desirable articles that can be carried as a side line by the talking machine dealer is the popular-priced watch. The ease in which this specialty lends itself to attractive display without unnecessary trouble is but one point in its favor. When these watches are carried the dealer appeals to an exceptionally large audience, composed of people in every walk of life. Popular-priced watches are carried by everyone. It is not an unusual sight to see a well-groomed person withdraw a nickel watch from his pocket, while across the street a baker's errand boy might be carrying the same priced timepiece.

The inference is obvious. The medium priced watch gives universal satisfaction, hence it finds a ready sale.

SHORTAGE OF VIEW POST CARDS.

The World is advised from an apparently authoritative source that there is a noticeable shortage of view post cards at the present time in New York and vicinity. Meanwhile manufacturers of post cards must have been aware that before the tariff went into effect over fifty per cent. of the view cards were of German manufacture. The fact was also obvious that view cards were and are becoming more and more popular. It seems strange, therefore, that provision was not made for the inevitable.

THE ART OF MIXING.

How It Helps the Merchant to Extend His Personal Acquaintance—A Gift That Pays Big Dividends.

Many men stick too closely to their stores. They do not get out and "mix" enough and fail to fully appreciate the wants of their neighborhood. An excellent idea for country dealers is to attend auctions, and that in doing so they learn what people want and get acquainted with the farmers of their vicinity from whom they must seek trade.

Dealers should make themselves prominent at all public gatherings and never fail to let the people know in what business they are engaged, says the "Traveling Man." The trick of making acquaintances easy is a great acquisition, especially for retail merchants or salesmen. It is a gift that rightly used pays big returns. There are men so constituted who will get on a railroad train for a fifty-mile journey and will know all the men sitting anywhere near them before they leave the car. You've seen them and noted that they are generally bubbling over with enthusiasm about their business. There are others who rather icily hold themselves aloof from their fellows and wait for advances which seldom come. Of course, there is a limit, but generally it is the man who isn't backward about butting in when an opportunity offers, or who has the ability to create an opening for himself, who has the biggest line of customers. Make all the personal acquaintances of a desirable nature possible. It's good advertising and equal to money in the bank.

Brazilian's Solution May Increase Photographic Trade with United States.

Vice-Consul Tarleton B. Taylor writes that a representative of an American photographic company, recently in Bahia, after studying the climatic conditions of Brazil, has found a chemical composition which, when added to the regular developer, counteracts the bad effects which the tropical climate has on photographic papers, plates and films. Mr. Taylor's details follow:

"The representative claims that photographic papers, plates, and films that heretofore have been guaranteed for one year only in Brazil can on account of this discovery be safely guaranteed for three years. I have seen him work with developing papers which had been in this climate for four years and were considered useless by a photographic supply dealer in Bahia, and which, when placed in the regular developing solution, turned black before the picture appeared. When the extra chemicals were added they seemed to retard the oxidation formed under the severe climatic conditions, and brought out the exposed picture as well as if the developing paper had been only six weeks in this climate.

"This discovery will, without doubt, greatly increase the sale of American photographic materials in this country, because this chemical composition will not aid European products on account of the use of strong chemicals for preserving the emulsion of their plates, papers, and films, the decomposition of which, when started, cannot be stayed by this new discovery."

BRIEFNESS IN ADVERTISEMENTS.

Readers' Time Valuable and They Do Not Want to Spend It Reading Unnecessary Words—Few Words Will Describe Many Goods.

Other people are, or ought to be, just as busy as we are, and it is but a point of fairness to suppose they are, no matter whether they are farmers, or mill people, or what-not. When we are busy and someone appears with a something or other to which he wishes to call our attention, we are always anxious and sometimes insistent that he shall be brief and to the point in his talk, that we may be convinced one way or the other without needless delay and distraction from the thing in hand. And right there is the point where we need to have care regarding our own conduct in calling attention of others to what we may have to offer for their consideration and purchase.

The advertising of our wares is always a problem; we are puzzled as to when we have said enough and are not always sure we have not said too much. There is a limit to terseness and condensation, but the limit is seldom reached when we are able to state facts. The simple facts regarding the goods are the only things which the public cares about and the public never cares to wander through a maze of needless words in order to get those simple facts. Too much "gab" is as easy and possible in the advertisement as behind the counter and a possible sale is as readily spoiled by too many words in the advertisement as too much talk behind the counter.

If there be a special reason for the sale or the offer of goods made, there is a good place for an introductory talk, says an authority, but that talk should be an explanation and not a great collection of words and phrases. To say it all briefly is interesting, to be verbose is distracting to the reader. The descriptions of goods need no more words than will tell of their points and merits. Why should valuable space be used to afford a setting for unnecessary words? To be able to tell enough in a few words is a real accomplishment in a speaker and of inestimable value to a writer of an advertisement which is perforce nothing more than a talk to busy people about something not yet theirs and therefore not yet very interesting.

The H. Hagemeister Company, of 41 Warren street, importers of post cards, have been adjudged bankrupt by the U. S. Court, Third District. The business is being carried on at the present time by a referee appointed by the courts.

SYSTEM IN BUSINESS

As Necessary as a Compass to the Mariner—Where System Is Needed and Some Excellent Suggestions on the Subject.

Business without system is like a ship on the ocean without a compass; no one knows which way it is drifting. Some of the fundamental laws of system are:

1. The art of keeping all departments of the business enterprise in good running order, as regular and as smooth as a faithful clock.

2. It is keeping your store and shelves in such good order that at a moment's notice an article can be produced.

3. In buying goods know exactly what you have in stock, and especially what you should not buy. Buying goods that are not needed is the contributive cause of over-stock.

4. Your correspondence requires system. You are using system when you can lay your hands within five minutes on any letter written or received or any order shipped during the year.

You follow system when you can see at a glance the voucher of every article in the store, where it came from, what it cost, and what it sells at. The jobber can keep books for this purpose. The retailer can write it in small figures on the tag of each article.

When you have a little book in your vest pocket in which you write down, as soon as the thought comes to you, everything you want to remember. Such a little contrivance is a great relief to an overtaxed brain, because you don't need to worry about some important matter being forgotten. When you know, at the end of each year, exactly how much profit you have made, or how much money you have lost in every department of your business. If one department does not pay throw it out.

When you know every three, six or twelve months whether a traveling salesman makes or loses for the firm. In the latter case the place must be filled by a better man.

When, daily, you can see at a glance how many goods of a certain number is sold, how many are in stock and how many are ordered.

When you can ascertain in a moment what kind of goods sell and what kind do not sell.

When every employe is in his proper place, knows exactly what his duties are, and does not interfere with anybody else.

When you can every moment open your ledger and point out exactly how much expenses you had, how many goods have been sold, how much money is outstanding and how much you owe.

When not a thing can go out of the store without it is properly examined, counted, checked off, paid for or charged.

When the smallest articles, as wrapping paper, twine, ink are charged to the expense account and added to the cost of the goods. Not to forget interest on capital invested, which many merchants do.

In merchandising there are two very essential things—buying and selling. The old saying is, things well bought are half sold, but there is no doubt that how well you may buy them, you do not get any returns until you sell them. If you purchase too many simply to get them cheap, you had better pay more and sell them oftener. I would put the selling above the buying for the average dealer, and state that in my opinion if he is unable to look after both carefully, he would better leave his buying largely to some conscientious jobber whose interest it would be to see that he had the right goods in the right quantities, and at the right place, and then push his sales.

"'Tis sales that move the wheels of business." The same elements that make success in any undertaking are essential in selling goods—viz., knowledge, confidence and enthusiasm. Knowledge of yourself and knowledge of your goods; confidence in your goods and in your ability to favorably introduce those goods to your friends—your customers, and enthusiasm born of that knowledge and bred of that confidence.

I place first knowledge of yourself. Self-appreciation stands at the top. I mean by that, self-appreciation, know yourself, develop the strong points and overcome the weak ones. That is what I mean by knowledge of yourself. Build yourself up. You should have a knowledge of your goods, how they are made, how constructed, and who makes them, and why one factory's goods are better than the other's, and why you believe they are better. Also cultivate appearance and attitude, for first impressions are lasting ones. There is a sermon in every line, and there is a sermon in every one of those points.

You should also know how to approach people, in order to make them see as you see, and think as you think regarding the merchandise being shown. The purest Anglo-Saxon is more convincing than effort at oratory.

First, prepare the way by getting the attention of the customer. This is done largely by judicious advertising and attractive display; then a conscientious showing of the goods (not your ability, or your oratorical powers, but your merchandise), thereby creating an interest in them. Interest naturally leads to desire, and then close the sale.

Confidence in the goods is necessary, as the customer must see that the salesman is sincere, or no amount of talk will avail. The manners and general appearance may create the confidence of the customer in the salesman and therefore in his goods. The salesman's interest in the goods is soon transferred to the customer, and he likes the goods because you do; and in order to keep the confidence you have won you must at all times be honest with your customers, and you can do this by being at the same time honest with yourself, and honest with your house.

Under enthusiasm I would speak of loyalty—loyalty to the interest of your customer, and above all, the house you represent. If you are not in love with your business get out of it, and the quicker the better. There is not a man now reading this article but what can make a good living in any undertaking which he seeks to enter. If you are not in love with your business, and do not believe in the goods you sell, and your ability to buy the right kind of goods and successfully introduce them to your customers, then get out of the business. You must have enterprise and loyalty.

If you cannot speak a good word for your employer, get a new job, and do it now. If you are working for yourself, and you are down and out with yourself, just quit your business, sell out, and travel around for a year and rest up; quit smoking, and eat more beefsteak, and as soon as you are full of ginger and vim then start out right.

You must have perseverance. Perseverance means energy—not genius; labor—not love; perspiration—not inspiration. Keeping everlastingly at it always brings success in any undertaking.

The real difference between men is energy. As S. A. Sanderson writes in the Sporting Goods Dealer, a strong will, a settled purpose, an indomitable disposition to go ahead and succeed is the real difference between great men and little men.

You want to be sincere in your business. Honesty above all things is essential. When you tell a person a thing you yourself want to believe that it is actually so. If it is not true do not say it. Stand back of your statements; if you recommend an article higher than you ought to and the customer brings it back, give him a new article and do not ask any questions, or make him feel that he has encroached on your rights.

How is a person to create another's interest in an article unless he is first interested in it himself, unless he knows about the article; how can he expect to intelligently present his case, and how can he expect to close the sale unless he is really enthusiastic in the presentation of the case, and yet many customers in our stores are actually obliged to sell the goods to themselves, simply because of the diverted and divided minds of your salesmen.

The lack of concentration is a sale killer. The clerk who is thinking backward to the baseball game of yesterday or living in anticipation of the dance to-night is in no condition to sell goods. Forget those things and keep your mind riveted upon your business.

LATEST CUSTOMS RULINGS.

Duty is Reduced on Some Lines of Pictorial Postcards.

In a decision by I. F. Fischer, the Board of United States General Appraisers partially sustained protests filed by Fillman, Lee & Happel and others of New York, regarding the classification of pictorial postcards.

The cards were held for duty at the rate of 25 per cent. under the provision in the Dingley tariff for "printed matter." This classification was opposed by the importers, who alleged specific rates of duty as "lithographic prints." The board finds that a portion of the cards are printed from metal plates or by other processes not lithographic. These goods are allowed to come in as claimed, although other cards are held dutiable as assessed by the Collector.

MANY MEN DO NOT CONSIDER

It Oftentimes Doesn't Pay to be Too Busy—Brain Mustn't Get Clogged.

Earnestness and activity in business is a good thing, but it doesn't pay to be too busy. Unless a man has some time to think in a natural way about things in general he loses a great measure of mental growth. It is well to be active—a wholesome thing for every faculty of the mind. But as trees and flowers need both periods of rain and periods of sunshine, so men need to be sometimes busy and sometimes able to stop and think. Quiet thought is refreshing to the busy man.

A great many men in business do not at all appreciate this fact, however commonplace it may seem. They drive themselves or let themselves be driven by their work all day long, day in and day out, year in and year out. What time they have away from their work is often spent in an endless round of social and pleasurable activities, leaving practically no half hour without its impending purpose, no time to stop and think and set their minds in order, no time to reflect or to let the mind act from impulses other than the purposes with which it is being driven continuously. Such a man's mind gets into a whirl, revolving in a very small orbit, and making him oblivious to greater themes that lie wholly outside of the limited circle of his own strenuous activity.

On a strictly business basis, this does not pay. It deprives the man of thoughts and ideas that might open up new opportunities of immeasurable value to his work. Whatever clogs up thinking retards progress.

LOWENBERG'S ANNUAL BUYING TRIP.

Martin Lowenberg, of E. J. Samson & Co., manufacturers and jobbers of postcards and novelties, sailed on the Kaiser Wilhelm the 28th of last month. Mr. Lowenberg will be gone about three months. This is his annual buying trip abroad and he will stop at all the important novelty centers, collecting salable articles for the Samson firm.

The Gillette is one of the best selling Specialties you can have in your store. It is especially good at Holiday time. Now is the time to stock for your Holiday trade. The Gillette display will create interest—sales—profits—just as soon as you get it on your counter—but not a minute sooner.

Every Christmas buyer who comes into your store is a possible Gillette purchaser. Women are looking for just such articles as gifts for their men folks. Men want the Gillette for themselves, and to give it to their friends.

Few other displays will give you as many sales for the space they take as your showing of Gillette Safety Razors.

Gillette Safety Razor, standard set, $5.00.

Pocket Edition, cases in gold, silver, or gun metal, with razor and blade box to match, retail complete from $5.00 to $7.50.

Gillette Combination Sets—from simple ones containing razor, soap and brush at $6.50 up to elaborate sets with everything the most fastidious shaver could desire at $50.00. Especially sought for gift purposes.

Ask us about special display cases with initial order for one hundred dollars' worth of razors. Or write your jobber without delay.

MOVING PICTURE MEN LOSE.

Justice Giegerich Refuses to Issue Injunction Against the Police.

Supreme Court Justice Giegerich handed down decisions, October 5, denying applications for injunctions in twelve suits brought by proprietors of moving picture shows against the Mayor and Police Commissioner. These suits were all brought when General Bingham was Commissioner, and asked that the police be restrained from closing up the shows on Sunday and from arresting the officers and employes for any other cause than a misdemeanor.

Justice Giegerich says of the allegations of threatened arrest that a study of the authorities convinces him that it is immaterial whether the police threaten arrest on the ground that it is unlawful for the places to keep open on Sunday, because under the stipulation by which the licenses have been issued the shows are to run only on week days, or because, under the penal statutes, it is unlawful to conduct such exhibitions on Sunday at all.

The court cited the decision of the Appellate Division in the suit brought by the Eden Musée for an injunction, in which the higher court said that a court of equity should not issue an injunction restraining a police officer from performing what he thought was his duty, even on the theory that the police officer was mistaken in his conclusion that the act complained of was a crime. The court held in this case that the remedy is an action at law against the police officer.

Justice Giegerich refers to the affidavit by Mayor McClellan in opposition to the injunction applications, which says that because of numerous complaints with respect to the conduct of moving picture places he formulated a new rule regarding their operation and required that those who got the licenses should agree not to run their shows on Sunday.

THE VALUE OF BARGAIN SALES.

Attract Trade When the Low Prices Are Genuine—Should Not be Featured Too Strongly at Expense of Regular Stock.

Bargains are fine things with which to attract trade, especially when they are real bargains—that is, goods of real merit offered at unusually low prices, but bargains are not what the merchant depends upon for the greater part of his profits. It is sometimes easy for an inexperienced merchant—and sometimes for old and experienced ones—to offer so many bargains and feature them so strongly and attractively that his customers, and other stores' customers, flock to buy them, but are so taken up with the bargains that they do not pay any attention to the more staple goods upon which the merchant relies very largely for his profits. In that case, the merchant is very likely to find that too many bargains, featured at the expense of his good, substantial profit payers, are dangerous.

A certain great department store in one of the largest cities of the country struck a terrific gait some years ago, using great double-page advertisements in the newspapers devoted entirely to a remarkable offering of exceptional bargains which were advertised as reductions of 33⅓ per cent. from regular prices. A few old and expert merchandisers shook their heads and predicted trouble; they said that the store could never keep up such a pace.

The people flocked to the store and snapped up the bargains as fast as they were offered, but the regular lines lagged and were neglected. Pretty soon people began to "get wise" to the fact that the offerings did not really represent a reduction of 33⅓ per cent.—that is, the prices were not 33⅓ per cent. below the prices asked for the same goods in other stores—and they were not, because the big store could not keep on securing the goods to sell at the prices it advertised.

DETERMINED TO ADVANCE.

The Man in Business or Social Life Who Has Definite Aims in Life and Who Pursues Them with Character as a Basis Will Win Out.

The very reputation of having an ambition to amount to something in the world, of having a grand lift aim, is worth everything. The moment your associates find that you are dead in earnest; that you mean business; that they cannot shake you from your determination to get out in the world, or rob you of your time or persuade you to waste it in frivolous things, you will not only be an inspiring example to them, but the very people who are throwing away their time will also admire your stand, respect it and profit by it, and you will thus be able to protect yourself from a thousand annoyances and time wasters and experiences which would only hinder you.

In other words, there is everything in declaring yourself, in taking a stand and thereby announcing to the world that you do not propose to be a failure or an ignoramus; that you are going to take no chances on your future; that you are going to prepare yourself for something out of the ordinary, away beyond mediocrity, something large and grand. The moment you do this you stand out in strong contrast from the great mass of people who are throwing away their opportunities, and have not grit and stamina enough to do anything worth while, or to make any great effort to be somebody in the world.

The very reputation of always trying to improve yourself in every possible way, of seizing every opportunity to fit yourself for something larger, better, grander, is an indication of superiority, and will attract the attention of everybody who knows you. It will win you recommendations for promotion, which are never won by those who make no special effort to get on. Lincoln was so hungry for an education, so anxious to improve himself, that everybody who knew him felt a real interest in him, and was anxious to help him. Most people are eager to help ambitious people who are trying to do something and to be somebody in the world. They throw opportunity and advancement in their way whenever they can. The very reputation of being ambitious—an earnest, thorough worker—is a splendid capital to start out with. It gives confidence and credit. It not only makes people admire you, but it also makes them believe in you.

LEADING THE SIMPLE LIFE.

A $75,000 automobile rolled through the $60,000 bronze gates and up the $35,000 winding avenue to the $20,000 marble steps.

Descending from the machine, the billionaire paused a moment to view the smiling $500,000 landscape.

Across the $90,000 lawn a $125,000 silver lake lay speeling in the shades of early evening, and beyond it rose a lordly $80,000 hill, whose crest, cloaked with forest at an expense of $200,000, glowed in the last golden rays of the setting sun.

The billionaire sank luxuriously into a $2,000 ivory porch chair and rested his feet on the rosewood railing of the $160,000 veranda.

"It is pleasant," he observed, "to get back to Nature once in a while. After the cares and worries of the business day, I certainly love to run out to this quiet little $60,000,000 country club of ours and taste a bit of simple life. It is good to keep in touch with the soil, for what is man but dust, after all?"

Feeling restored, he passed in through the $400,000 doorway to his $1,500 dinner.

VALUE OF THE LOCAL NEWSPAPER.

Often Underestimated by Merchants—A Valuable Business Ally.

Many a merchant would be astonished if he knew how many people "size up" a town by the local newspaper. A live newspaper in a community is read by the people, ads as well as local news items—the whole family read it. If the merchants of a community will educate the people to look for their announcements in the newspaper, more and more people will read the paper and greater will be the returns. Stand behind your newspaper and push it, but not against the wall. A live and progressive newspaper will help every merchant in that community. If you have a store and property interests, the more reason you should help them, for by pushing their business your own will go forward. It does not prove anything if you run an ad once or twice and don't get results anticipated; keep at it and things will come your way. If the editor or publisher is any kind of a man he will be fully alive to his opportunities. Mail order or any other kind of competition will not bother you.

Money is not made by manual labor alone these days. A living will be the portion of the man who only toils with his hands, but fortune waits for him who uses both head and hands judiciously.

WHY SIDE LINES PAY.

Bring New Customers to the Talking Machine Dealer Wherever Tried.

An interesting story is told by a novelty salesman who has just returned from a business trip.

In a certain western town he called on two talking machine dealers and succeeded in getting a nice order from one of them. The other merchant treated the salesman to a lengthy impromptu address on the reasons why side lines would not pay. The salesman gave him up in despair and left without his order. This happened on a previous trip.

He stopped off in the same town on the trip he has just returned from and reports that now there is but one talking machine dealer there. Incidentally the remaining one carries side line goods.

The same salesman tells one of another town. He called on a dealer and was told that the goods could not be sold at all in that place. The retailer went as far as to say that he had made a study of local requirements and spoke authoritatively.

Two blocks away the drummer saw the complete line of his principal competitor and was told when he called in that they were the quickest selling goods he had ever carried.

REACHING NEW FIELDS.

How the Advertiser Can Be Benefitted by Publicity in the World.

About the knottiest problem confronting the advertising manager to-day is how to reach new, undeveloped fields of business that promise to yield a harvest of orders if cultivated.

The wily advance agents of a circus sizes up a new town with a keen eye and can tell immediately whether his show will pay there, and part of the advertising manager's duty is to keep his eye on the business horizon and be ready to grasp the opportunities that appear from time to time.

The Talking Machine World offers to manufacturers of articles that can be handled as side lines by the dealer, the greatest opportunity they have ever had to increase and broaden their business.

Monthly thousands of talking machine dealers, the cream of the trade, are reached by this paper, and it is not hard to perceive what an excellent advertising medium it makes.

The field is new for the greater number of manufacturers of specialties. The opportunities for quick and large sales are particularly favorable. The trade appealed to have money and are unusually progressive. Therefore everything is in favor of these manufacturers reaping a bountiful harvest. Need more be said?

SOME FORCEFUL MAXIMS

Scattered Around in a Large Rochester, N. Y., Factory for the Perusal of Employes—Some Good Solid Business Sense in Paragraphs.

A visit to the factory of the Pritchard-Strong Co., Rochester, N. Y., is always interesting, because of various maxims, bearing consecutive numbers, which are scattered around. Each one is brief, to the point, and forceful. They are the work of Mr. Pritchard, and convey so many good ideas that they are worth close study on the part of talking machine men. They read:

If you want to be successful, attend to business.

It's the man who's up and doing that comes out on top.

Quality first; speed afterwards. Don't hurry 'til you're sure you're right, then "Johnny on the spot."

Remember that we must work together in order to get the best results. Boost where you can; don't knock.

Never mind the other fellow's job. Your own is sufficient for you, and your firm will notice your improvement.

Blue Monday spoils your week as well as ours. Let's have every day better than the one that has gone before.

We won't forget you if you're pushing for front rank honors, and don't forget us.

Help us all you can, and we are bound to help back.

You must push hard and steadily to succeed in anything.

Lack of interest means lack of success—both for you and us. Competition will then kill us.

Wasted time is wasted money, yours and ours.

Only a fool is easy—the soldier hard and stern—the latter wins battles and is remembered, the former soon drops out of sight.

Be a good engineer—try to make time—at the same time remember that quality counts.

There is plenty of dignity and respect and responsibility in every job. Your job is what you make it.

Let's be a happy family together, not merely employers and employes—but all workers for the best that is in us. It's the only way we can get ahead of competition and makes us all feel better. The world knows us by our work.

Let's make the best goods in America. Reputation, after all, is the only thing that endures.

Never mind pay day—we will attend to that for you.

Industry always beats idleness. There is no goal it cannot reach.

You want the best salary you can earn. We want your best efforts so we can pay it.

Keep your character as well as your body strong—strong characters are always in demand at a good price.

It is a fine art to do uniformly good work—we want only the best.

Kind thoughts, kind words, kind acts and a shoulder to the wheel all together, will bring the best success for all of us. The race is won!

Let's start and stop at full speed. Lost time is lost money for somebody—that's all of us.

CUT OFF USELESS STEMS.

In Business, as in Everything Else, It Pays to Eliminate the Things That Don't Count.

Eliminate the things that don't count. Put all your strength into the things that do. That's the way to make a real success in any line. In a florist's shop I saw a vase of great shaggy chrysanthemums. My thought flew back a few years to the small and insignificant chrysanthemums we had then, not much bigger than a daisy, but with a great many stems and flowers on one plant. Now, we have bigger ones than were even dreamed of then. It was found that by cutting off some of the branches and forcing all the growth into one stem it would produce a splendid flower worthy of the admiration of all.

Many persons wonder why they don't amount to more than they do. They know they have good stuff in them, that they are sincere, energetic, persevering, and have ample opportunities. But they feel that they are not making satisfactory headway in any particular line. Let them trim some of the useless branches. The men who have made the real successes have done so, and have thrown the whole force of their lives into the development of things that were essential to the kind of success they desired. They have not prided themselves on the number, but on the quality of their branches. They have not dissipated their time by taking part in every byplay that claimed their attention, but have cultivated the main stem.

—W. D. Warren.

GOOD SIDE LINE FOR "TALKER" MEN.

With commendable enterprise, the Arctic Novelty Co., 30 West 32nd street, New York, have put on the market elaborate alabaster statuettes of Dr. Cook and Commander Peary, as well as one of a Polar bear and also an Esquimau boy. These miniatures are finished in shaded ivory effect, are very finely modeled and can profitably be retailed for 75 cents. A sample dozen, assorted, can be procured by sending $6.00 to the firm at the above address.

GET OUT OF THE RUT!

There are many men in special lines of trade who do not realize the many paying opportunities which are afforded them in handling lines of merchandise which blend harmoniously with that which they are selling.

Take for instance piano players.

Now there is nothing which will come into the life of the talking machine business that will compare in selling strength with piano players.

They will help the dealer to increase his profits without increasing his overhead expenses.

Now which player?

That's the question.

And it's easy to answer.

THE ANGELUS by all means.

It's the original piano player and has kept its position right to the front through all the years.

All the details incident to the Angelus agency can be easily explained and we can tell you—show you—the way to secure more business, but better still, paying business.

A word to the wise is sufficient.

MERIDEN CONNECTICUT

"GOOD WILL" HARD TO DELIVER.

Better Work Up Your Own Says Hollis W. Field in the Worker's Magazine—Some Forceful and Pertinent Observations.

"Yes," quoting the proprietor of shop or store, "everything is for sale—stock, lease, furniture, fixtures and good will!"

But does the average investor appreciate that one of the most difficult of all the valuable assets of an established business to deliver to the purchaser at any price is that intangible "good will" of a business?

It is conceded that any business long established on successful lines must have its distinct good will asset. The measure of its success is the measure of its attendant good will. But this good will has been built up altogether by another management than that of the new purchaser. In putting a price upon it the seller virtually is attempting to sell to the purchaser a proprietary right to the trade of his old customers.

"I'm going to sell out to a new man," he explains to this customer, "and he's counting upon you to continue to trade here as you have been doing for so long."

Is anything more easily natural to thousands of people than a mental "Oh, indeed! Is that so?" and at once for the person to decide for himself that thereafter he purposes buying almost anywhere else in the county? Will the proprietor who is selling out attempt to measure just what proportion of this good will he is able to deliver? Will the purchaser attempt to gauge just how much of it he may expect for his money?

Purchaser Overlooks Many Things.

Too often the purchaser of such an established business counts far too much upon the good will asset. He is disposed at first thought to think of the place as having a "rousing trade." He takes this for granted as easily as he considers that the business carries a large stock. He forgets altogether that in taking over the business it is more necessary for him to take invoice of himself with reference to holding this trade and good will than it may be to take an invoice of the stock itself. A certain amount of money will buy a similar stock almost anywhere in the market; often all the money the business man may wish to have is insufficient to command trade.

In many cases where a small neighborhood business is involved the personality of the proprietor has been the strongest factor in building up a good will for his establishment. This particular individual has been a good "mixer." He is in sympathy with the local atmosphere which surrounds him; he has established pleasant social relations with his customers. Some unusual circumstance in his life there may have given him opportunity for emphasizing his personality to a neighborhood.

Whatever this personal hold upon his patrons, in that degree it must come as a disappointment that he should sell out and leave his business to the stranger. To the extent that his successor differs in his personality the successor may count upon the old customers remarking, "What a change in the place!" That first impression of change must be most marked in the individual successor himself.

Problem One of Retention.

It is just here that the purchaser relying upon the intangible good will of a purchased business should take stock of himself and look to the ways and means by which the former proprietor has built up this good will. The problem of the successor is not so much paying the price for this good will as it is to retain that good will after it has been acquired by purchase. It is absurd for a purchaser to imagine that this asset, under a new management, is to continue as a matter of course. In one way and another it has been carefully nurtured by the good business man who has built up the business. Whatever the methods to that result, they must be continued perhaps in stronger measure than before.

As a good business venture it is impossible that a purchaser should expect to succeed to a good will based on the personality of a man wholly different to himself. It is preposterous that a sober, silent, diffident man should succeed to the good will of a business built up by a typical good mixer with knowledge of human nature and possessed of the tact and diplomacy to carry him through.

Often the matter of nationality is of enormous consideration in such a trade. Especially in the larger city neighborhoods where some one nationality largely is represented in the population, the business man builds upon this nationality line. If his successor shall be of another race it is almost impossible that he should hope to succeed to a business good will.

Day's Sales No Criterion.

While this asset of good will may be the greatest factor in a business, at the same time it often is mistaken by the enthusiastic purchaser who finds a proprietor inclined to trade upon it and bring it forward as something worth the expenditure of money. To this end the proprietor of the business most often points to the average sales of the business. As a matter of fact, the magnitude of a day's sales may have the least bearing upon good will. It may be that the site of the business is such that no other competitor is in easy reach. Customers by scores may buy there always under protest.

Looking over a neighborhood and inquiring into the standing of the lone house with the big trade, the discovery that its proprietor is unpopular with the resident population may be the strongest encouragement for his opening a business in competition upon the nearest corner. He determines that the existing house has no element of good will within it; he feels that he knows how to make this good will appeal to logical customers—and his venture is based upon this fact.

Again, good will as an asset of a business is a questionable investment, its promise depending not a little upon the honesty of the man who has worked it up. Often a gullible purchaser, satisfied of a good will asset, pays a fancy price for the intangible property only to discover later that the "retiring" head of the concern has become dissatisfied with his location, stock and fixtures, and has sold out only that he may open anew just around a corner, where he can maintain his good will hold upon his old customers.

"Good reasons for selling," is one of the old exactions in such a trade, but for the plausible man prepared to bank upon a good will sale these reasons may be framed most attractively to the purchaser, who has visions of a new and paying business already on its feet. A wife or child in bad health and needing a change of climate—a farm left to the proprietor through the death of his father—"reasons" are easy.

One phase of this good will asset traded upon largely in Chicago in the past has been the new apartment building, for sale by the contracting builder, and already fully tenanted.

To the uninitiated purchaser, often from some rural community at a distance, a new flat building built to sell and every apartment filled with dressy furniture belonging to respectable-appearing tenants bound by a year's lease holds out to the purchaser a vision of the easiest kind of money. Yet in times past it has been found that builders of these new apartments virtually have had tenants under lease to themselves, promptly to fill up a new building for this purpose of sale.

In contrast to this good will bait so often used as a confidence game is the sale of a business in which the new proprietor is quick to make plain to every passer in the street that "This Place Has Changed Hands!" This notice most often is served in large letterings upon the public from the front of a saloon, but often from the Chicago restaurant front.

Starts With Clean Slate.

Here the new proprietor gives evidence that he has made a bargain purchase in which the absence of any evidence of good will of the former management allows of his offering new attractions to new customers. He announces, in fact, that not having been taxed at a premium for good will built up by a former proprietor, he is prepared to start in with a clean bill and attract the good will of the business to himself.

"You must have been dissatisfied under the old management of this place," is the interpretation of the notice; "come in again and see how differently you will be treated."

Looking such an announcement over in this light, too, providing that the successor is a capable man of business, will the potential customer of the place deny that it holds out considerable promise on the face of it?

A report has been received from an American consular officer in the Far East furnishing the name of a local concern that is desirous of securing a supply of slot machines of the weight-giving, fortune-telling, and music-vending varieties and combinations.

To Business Men

Business men in every line admit the value of good trade papers.

A trade paper must be original—it must contain a variety of matter including news service—technical information—in fact it must crystallize the entire news of the special business world, and be a helpful adjunct to every department of trade.

Scan the columns of The Talking Machine World closely and after you have completed an analysis of the contents of this publication see if you can duplicate its value in any other trade!

The World is a help to the talking machine business.

It exerts an healthful optimism.

It wields an influence for the good and every man who sells talking machines, no matter in what part of the universe he may be located, should receive this publication as regularly as it is issued. He is missing a vital business point if he fails to do this.

Thousands of dealers not only in the United States but in every country on earth consult the pages of the World regularly.

They draw from the World pleasure and profit.

The talking machine business has a brilliant future, and this publication is doing much to enlarge the business horizon of every retail talking machine man in the world.

To receive this paper annually costs but $1.00. All foreign countries $1.25.

SOME REMARKS ON TRADE-MARKS

By H. S. Snyder of the Advertising Department of the Joseph Dixon Crucible Co. in the New York Commercial.

In his book, "The Law of Advertising and Sales," Clowry Chapman shows a page of trade-marks containing upwards of 125, and this is perhaps not more than a quarter of the comparatively well-known marks and symbols used by advertisers. These consist of proper and coined names, faces, signatures, phrases, numerals, figures or designs—in many instances, combinations of two or more of these elements.

A face and a signature constitute a good trade-mark, in that they give excellent protection against infringement. There is little likelihood of one advertiser looking so much like another as to lead to confusion, and the duplication of an advertised signature is a serious matter for the guilty party.

One of the best examples of this class of trade-mark is the face and signature of Thomas A. Edison used by the National Phonograph Co. Not only does this trade-mark possess what might be termed the generic advantages of this kind of mark, but it has, in addition, a specific value, given it by the prestige and fame of Mr. Edison. No amount of paid advertising could have secured a like effect in its full extent. A man of long experience in the advertising field has stated that he believes it cost the General Electric Co. thousands of dollars to build up the same prestige and reputation behind their name which existed before the name Edison was dropped from their corporate title.

An advertiser who finds it desirable to impress readers with his personality, who wishes to give his announcement a touch of individuality, can use his photograph to advantage. This applies especially where a service more than a commodity is being advertised. If an advertiser's face has the stamp of integrity and experience, and he is dealing in real estate, for instance, the use of his photograph is advisable. It has been stated that when Mr. Ostrander (whose face was a standard feature of the magazine advertising section a few years back) omitted his photograph his business dropped off from 25 to 50 per cent.

Like the photograph, the signature has an ulterior effect beyond its value as a means of identification and an expression of personality. Signed advertisements seem to partake of the nature of affidavits—"I hereby set my hand and seal." A modern corporation is, in the popular mind, an intangible sort of an affair, and its statements partake of this intangibility. But an individual is usually careful about statements to which he attaches his name, and so it follows that, given a signature, we get a careful statement.

But behind all trade-marks there must be advertising, for the trade-mark is valuable chiefly to the extent to which it is known. A good trade-mark well advertised is one of the best of assets. There are many advertising rumors, which are probably based largely on fact, that immense sums of money have been offered for such names as Royal, when applied to baking powder, and Mennen for toilet powder, and that these offers have always been refused.

The establishment of the trade-mark is considered one of the best protections against infringement and unfair competition. The public is the court of last resort, and it will usually remain loyal to a well-advertised, meritorious article.

Mrs. J. W. McCollum wife of the proprietor of the Marietta Phonograph Co., died recently at Parkersburg, W. Va. She was a woman of many estimable traits of character and highly esteemed by a large circle of friends.

PHONOGRAPH FOR MARITIME USE.

An Immense Machine with Eight Horns for Carrying Messages Over a Vast Area.

New devices are constantly being introduced for the protection of those who "go down to sea in ships." Every day almost a new life-belt, life-boat, buoy, or other life-saving contrivance is introduced so as to make life on the ocean waves as safe as possible. One of the latest modern appliances which has proved very effective, and will no doubt come into general use, is the phonograph signal, which is used for shouting warnings or other information across the sea.

The device consists of a tremendous phonograph, to which eight large horns or megaphones are attached. These horns point out to sea in eight different directions, and carry the message emitted from the machine over a vast area.

In foggy weather, for instance, at night, when it is impossible for ships to see the danger which threatens them on the coast or for the coast-guards to see the ships in time to warn them, this phonograph is invaluable.

The announcement which it is intended to spread broadcast among approaching vessels, no matter from what direction they may come, is spoken into the machine, and then, without any further attention from human hands, the warning is shouted at stated intervals through the eight megaphones at once.

It is said that the sounds emitted from this wonderful device can be heard four or five miles away, and its advantages over the ordinary bell-buoy lies in the fact that while the bellbuoy may be heard, the message which it is intended to convey may be misunderstood by a strange mariner, whereas, with the phonograph signal the warning may be made as definite and as specific as may be desired.

TRACING SOUND WAVES.

An Apparatus for Making Enlarged Tracings from a Cylindrical Record Described by F. Proctor Hall Before the British Association.

An apparatus for making enlarged tracings of sound-waves from a cylindrical record, the magnification ranging from 150 to 2,500 times, was described recently by F. P. Hall before the British Association. In the sound-waves two elements are distinguished—impulse and resonance—which are illustrated by waves from the cornet, violin, bugle, etc. Vocal waves are found in groups regularly repeated. Each group contains a single impulse from the vocal cords, together with one or more sets of resonance waves produced by vibrations of the air in the vocal tubes. Pitch is determined by the number of impulses per second—*i. e.*, by the number of wave groups—and is not affected by the character of the waves within the groups. The vowel quality of vocal sounds is not perceptibly affected by the number or form of the resonance waves, but is dependent upon their periodicity. The rate of the resonance waves may be calculated from the length of the air tubes upward from the vocal cords. The calculation shows, for example, that the sounds m, n, ng, all contain a resonance wave whose period is about 530. The mean rates found from measurements of the enlarged waves are for m 550, for n 535, for ng 580. The observed rate for the sound of a in the word "great" is 420, and for the sound of a in "mat" 770 waves per second.

At the talking machine department of S. P. Dunham & Co., Trenton, N. J., which is being conducted by the Columbia Phonograph Co., a number of concerts have been given the past month in honor of the formal opening which were well attended.

MALIGNING THE "TALKER."

Propensity of Those Who Do Not Understand the Talking Machine to Rant About It as a Nuisance—Dealers Should Stand Up for Fair Play in Their Towns and Defend Their Business—One Newspaperman's Asinine Remarks—Up to the Dealers to Act.

Editorial writers on many of the daily papers are oftentimes amusing in their ignorance when discussing talking machines. With some exceptions, they treat this wonderful creation as a toy and refer to it either in a humorous or sarcastic vein, thus proclaiming how thoroughly out of touch they are with the development of this special industry and the perfection which has been reached in the manufacture of present-day machines. Here is a gem, for instance, from a Birmingham, Ala., daily paper:

"The talking machine sounds like a cross between a buzzsaw and a spit-fire. It can issue more noises in a given time than an accordeon and a jewsharp together. It is an excellent means of torturing one's unpopular neighbors, and often the only relief to the victim is to summon the police and thereby preserve the public peace. A female boarding school during instrumental and vocal practice hour would be far preferable in the neighborhood to those who have some ear for or appreciation of music than a talking machine working full time."

Now, here is a writer who deserves to be a member of the Royal Association of Jackasses. We have read nothing in many moons so assinine, or so ridiculous, as this estimate of the talking machine. It is evident our friend either owns or heard a talking machine "born" around 1870, or else his home adjoins that of a neighbor who owns a machine, or records, that should have been relegated to oblivion many years ago. If he possessed a modicum of intelligence, he could not, even with the most disordered liver, conjure up any such fanciful idea of the present-day talking machine as is submitted in this excerpt.

Seriously speaking, it is nonsensical rant such as that uttered above, and which appears in so many small newspapers throughout the country, that has done and is doing so much to keep many people from investigating or buying the talking machine. And it is this kind of work that the local dealers must labor to counteract. Wherever they see misstatements of this kind in a publication they should make it their duty to write to or call on the editor and inform him how incorrect is his attitude. They could best educate him by bringing him to their store, or take a machine to his office and demonstrate in a most convincing way that the talking machine of to-day is a creation of distinct musical merit, an educator and a helpful influence in disseminating musical knowledge and culture throughout the nation.

No man disposed to be fair can ignore the value of the talking machine, or the talking machine records which are being manufactured to-day in this country. It is, however, a gratifying fact to record, that hundreds of writers who formerly cast odium on the talking machine have been converted to a proper appreciation of its merits and they are to-day unquestionably among the most enthusiastic regarding its possibilities.

LAUGH IT OFF.

Are you worsted in a fight?
Laugh it off!
Are you cheated of your right?
Laugh it off!
Don't make tragedies of trifles,
Don't shoot butterflies with rifles—
Laugh it off!

Does your work get into kinks?
Laugh it off!
Are you near all sorts of brinks?
Laugh it off!
If it's sanity you're after,
There's no recipe like laughter—
Laugh it off!

CASH REGISTER THAT TALKS.

Invented by Minnesota Man—Sings Out Sales Made.

Something elaborate in the way of a cash register has been invented by a Minnesota man. His cash register not only rings up a sale and registers the amount in figures, but sings it out. When the keys for a sale of $1.48 are touched certain phonographic reproducers are released and the machine sings out: "One dollar and forty-eight cents! Thank you very kindly. I think you will find those goods satisfactory," or some other appropriate remarks. In addition to its novelty, this register has some very useful traits. For instance, in stores where clerks are disposed to line their own pockets and ring up the wrong amount for sales, such a machine would frustrate their plans by calling out the figures they had pressed. It might be put to further use by having a few records singing the praises of bargains in the various departments or making a few pleasant remarks about the weather and inviting the customers to call again.

GOAHEAD AUSTRALIANS

Are Messrs. Jackson & MacDonald, Who Are Booming Edison Records in the Antipodes.

Jackson & MacDonald, the enterprising Edison jobbers, corner of Kent and Druitt streets, Sydney, Australia, have favored us with some literature bearing upon the Edison Amberol and Standard records, which they have issued to dealers for the purpose of stimulating trade. They are certainly most attractively designed and emphasize that our Australian cousins are right up-to-date in developing business in the talking machine trade. In their window sheets they make a special feature of the Lauder Edison records as well as those by Ada Jones and Billy Murray. We congratulate Messrs. Jackson & MacDonald on their enterprise.

HOW HE GOT HIS INSPIRATION.

Love Poems from the Phonograph Record and Effusions of an Overheated Imagination.

In a recent $10,000 breach of promise suit brought by Clara M. Catoggio against Dr. Walter H. Henning, the attorney for the plaintiff submitted a lot of poetry sent by the defendant in which he avowed his affection for the plaintiff in most endearing terms and which naturally raised her opinion of him as a poet. It was disclosed, however, in the suit that the doctor had no desire to shine as a poet laureate, and stated that his effusions were not composed by him, but had been copied from a phonograph record. Thus are inspirations and reputations undermined. Incidentally it may be said that Miss Catoggio did not get her $10,000, for the suit was dismissed.

NEW EDISON MEXICAN RECORDS.

Thirty-two Records, Twelve of Them Amberol, Made by Well-Known Jorda-Rocabruna Quintet—Typically Spanish Selections—Something of the Organization Which Made the Records and Their Leader.

The National Phonograph Co. obtained a number of records by the Jordá-Rocabruna Quintet, along with many other Mexican records, while recording in Mexico lately. A total of thirty-two selections by this orchestra have been secured, twelve Amberol and twenty two-minute. Many of these selections are typically Spanish, with the characteristic haunting rhythm of tropical music, and they comprise a number of enchanting dances and several classical and operatic pieces, all of which should receive a hearty welcome wherever good music is appreciated. The Jordá-Rocabruna Quintet is a unique organization, undoubtedly the best orchestra in the Republic of Mexico. Under the joint leadership of Senors José Rocabruna and Luis G. Jordá it has attained a distinction unrivalled. It is composed of a first and second violin, violoncello, piano and organ.

This orchestra, besides being in great demand for all exclusive social affairs, is always selected to play at Presidential and diplomatic functions, and at a recent banquet given by President Diaz to the foreign diplomatic representatives and their wives, the instrumental numbers of the program were rendered alternately by the Jordá-Rocabruna Quintet and the Banda de Policia. A number of records by the latter have also been obtained by the National Co., and were dwelt upon in the last issue of The World.

Señor José Rocabruna, who plays the first violin parts in the quintet, is an eminent violinist and enjoys an immense popularity not only in Mexico but in all the capitals of Europe and South America, where he has toured many times and always met with great success. Haruly less famous than its possessor is his violin, which is an Amati and valued at $3,000. The violin is nearly four hundred years old and is a masterpiece of violin construction. The National Co. were also fortunate in obtaining a few violin solos by Señor Rocabruna, played on this wonderful instrument, and it is safe to say that such a treat to lovers of violin music is rarely offered. Señor Luis G. Jordá, whose place in the quintet is at the piano, is one of Mexico's best composers, and has written many beautiful dance pieces and operettas. The Jordá-Rocabruna Quintet have not made records for any other company, and the National Co. were certainly fortunate in prevailing upon them to make these selections. While made primarily for Mexican and Spanish trade, it is thought these records will find a ready sale in the domestic field, for, as indeed may be said of most Mexican instrumental music, they are very high class, and the selections possess an appealing and delightful charm.

JORDA-ROCABRUNA ORCHESTRA MAKING RECORDS FOR THE NATIONAL CO.

SHEIP & VANDEGRIFT, INC., WIN SUIT.

Action of Excelsior Drum Works Against Sheip & Vandegrift, Inc., Over Infringement of Patent on Wooden Horn Dismissed with Costs—Appeal to be Taken.

(Special to The Talking Machine World.)

Philadelphia, Pa., Oct. 30, 1909.

In a suit brought by the Excelsior Drum Works, Camden, N. J., against Sheip & Vandegrift, Inc., of this city, manufacturers of the Music Master wood horn, for infringement of patent, No. 873,908, Judge McPherson in the United States Circuit Court, eastern district of Pennsylvania, on October 20, 1909, dismissed the bill against the defendants with costs.

There was a mass of expert testimony introduced into the suit, such well known personages in the talking machine industry appearing as L. F. Geissler, general manager of the Victor Talking Machine Co.; James Wobensmith, Adolph G. Soistmann, Robt. P. Hains and others.

In speaking of the suit the Sheip & Vandegrift people said: "The complaint was brought on the theory that the Sheip & Vandegrift patent conflicted with that on which the suit was brought, but the sustaining of the defense holds to the contrary, and gives the Music Master wood horn a clear title."

A. G. Soistmann, vice-president and general manager of the Excelsior Drum Works, informed your correspondent that an appeal will at once be taken from the judge's ruling to the Circuit Court of Appeals.

YOU · GET · IT · ALL · FROM · US

Quality, Service, Satisfaction and Success

Send your Victor and Edison orders to the "House of Quality." All orders for records, both Victor and Edison, are being filled with records of the most improved recording now leaving the factory. This is important to you.

Our dealers say that we pack goods with more care, ship more promptly and fill orders more completely than jobbers who sell talking machines as a side line Send your orders to the "House of Perfect Service." It costs no more.

The man who hasn't made an error is dead, and those who say they never make one will die soon. We admit making an error occasionally but we are just as quick to rectify it as we are to acknowledge your remittances. That is Satisfaction.

If you will send your orders for Victor and Edison to us you will not only be on a par with your successful competitor, but you will stick out from the bunch like a large wart on a small pickle.

Eastern Talking Machine Co.

177 TREMONT ST. BOSTON, MASS.

A Victor Christmas

In several of our largest full-page spaces for December we are pounding into the minds of music-loving readers the unequalled value of the Victor as a Christmas gift.

You know what *that* means; you know what good, forcible *Victor* advertising *always* means—sales, and sales and sales, with a big round profit in each one of them.

You know, too, what past Decembers have proven to you—that there is nothing *quite* so popular for a Christmas gift *as the Victor.*

Make this December your "biggest ever." Back up your knowledge and our efforts with a little additional hammering at your end of the line. Talk Victor; show Victor; announce one or two Victor recitals. Emphasize the class of artists who sing for the Victor, the kind of bands that play for it, the quality of its records, the all-inclusiveness of its library, and thereby prove from *every* standpoint, the Victor has no peer.

Don't let the Christmas of a single good "prospect" get by without *selling* him a *Victor.*

And keep in touch with your local distributor—your being "just out of" wanted supplies during this "hustle" month means sales for "the other fellow."

E

TRADE ON THE PACIFIC COAST.

Decided Improvement in Business Noted by Talking Machine Dealers Last Month—Portola Festival Interrupts Business Slightly—Geo. W. Lyle a Visitor—Columbia Co. Store to Move Soon—Wholesale Trade Excellent—Wiley B. Allen Co. Department Expanding—Pacific Phonograph Co. Preparing to Move—Bacigalupi's Good Business.

(Special to The Talking Machine World.)

San Francisco, Cal., Nov. 5, 1909.

Quite an improvement has been noticed by talking machine dealers on the Pacific Coast for the last month, considerably more life being noted in both city and country business. Locally, of course, things were more or less interrupted by the Portola Festival, which brought such crowds that there was little chance to get people interested in any particular line of merchandise. All the firms, however, took advantage of the crowd to put out their best window displays, and many country people made inquiries regarding high-class goods with which they have had little familiarity in the past. With the exception of one week, the movement of both machines and records has probably been more active than at any earlier time in the year, while some houses have exceeded last year's sales records. This week has brought a further improvement, and from now on the regular holiday rush is expected to prevail.

The outside dealers placed most of their orders earlier in the season, but many who came to the city last week made arrangements for additional stock, and the local wholesale firms are now busy shipping out goods to retailers in the smaller towns. The latter, as a rule, have had a better run than they expected this month, and look for one of the most active holiday seasons in their experience.

Walter S. Gray, Pacific Coast manager for the Columbia Phonograph Co., went to Portland, Ore., last week, where he met General Manager George W. Lyle. After spending a couple of days in this city, Mr. Lyle left for Los Angeles. Mr. Gray accompanied him, but returned early in the week.

The San Francisco store of the Columbia Phonograph Co., in charge of Mr. Scott, has not yet changed its location. As Van Ness avenue was out of the way of most of the Portola excitement, it had rather a dull time, though things are picking up a little this week. Mr. Scott says the month as a whole was much better than September, and it looks like a steady gain from now on. The Columbia people have two downtown locations in sight, and will move just as soon as a lease can be closed. It is their expectation to secure a place before the holidays, and they will fit it up according to the most modern ideas.

Good work is being done by the wholesale Columbia agents in other parts of the Coast. Kirk, Geary & Co., at Sacramento, are placing large quantities of goods for the holiday season all over northern California, and the Eilers Music House, which recently took the Columbia agency in the Northwest, now has its preliminary campaign well under way.

Benj. Curtaz & Son have given comparatively small space to the talking machine department in their new store, but are nevertheless getting a very fair trade in that department.

Clark Wise & Co. still make talking machines one of their principal features, and their machine playing opera airs from the upper window was quite an attraction last week. Their window display was one of the most attractive in the city, and brought in many inquiries.

Manager Anrys, of the Wiley B. Allen Co., states that the new talking machine department in this city is expanding its business steadily, and is doing particularly well on high-class Victor goods. This, it is believed, is largely due to the location, which seems to bring in only the better class of trade. Quite a lot of lower-priced goods were put in stock when the store first opened, but they are still moving slowly here. The Oakland store, however, is getting its usual share of all classes of business. The sale of Victrolas has been especially gratifying.

Byron Mauzy reports a big improvement in his talking machine business this month. He took full advantage of the crowds that thronged Union Square during the Portola Festival, playing a Zonophone from an upper window a large part of the time.

Mr. Beck, who has charge of the retail talking machine department of Kohler & Chase, is keeping very busy these days. While he has only the city trade to take care of, he is covering it as thoroughly as possible, and getting very satisfactory results.

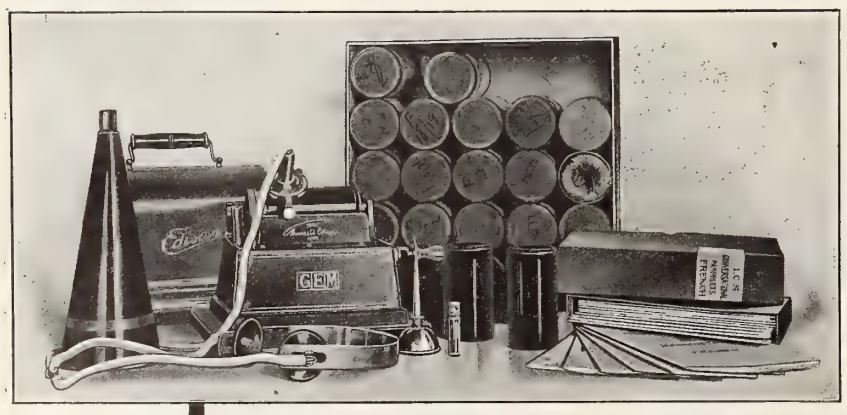
The Pacific Phonograph Co. are now beginning preparations to move into the new Kohler & Chase building at O'Farrell street and Bagley Place, which is to be occupied about the first of December. There is considerable work to be done, as in addition to the main office, which is now in the Harry J. Moore building, the entire wholesale stock is to be moved over from the warehouse in Oakland. The concentration of the business in one location, however, will be of great benefit in economy of handling the stock.

Peter Bacigalupi, of Peter Bacigalupi & Son, returned from his eastern trip just in time to witness the Portola parades, which he believes surpassed the New York celebration in beauty. While in the East Mr. Bacigalupi arranged for large shipments of talking machine goods, and is now waiting two carloads from the Edison factory and one from the Victor. He reports quite an increase in sales of the Edison Business Phonograph, of which Will Ackerman has immediate charge. This machine has attracted the attention of some of San Francisco's large mercantile firms, and some large sales are in sight during the next month. Mr. Bacigalupi also reports the sale of a good number of Victrolas of late. During the festival many of the outside customers called at the Bacigalupi establishment on Market street, and were royally entertained, refreshments being served on the mezzanine floor to all comers. Many of the visitors stayed to place liberal orders. The demand for new Edison goods has continued very large, and deliveries will be made shortly. Mr. Bacigalupi is highly appreciative of the reception given him on his visit to New York, and says it reminded him of the old-time California hospitality.

J. H. Gill, representing the Edison interests, is visiting the outside stores in southern California, accompanied by O. A. Lovejoy, of the Southern California Music Co., taking orders for the Cygnet horn. They are taking large orders from practically every dealer in that territory.

On Sunday, Oct. 10th, the baseball teams of Sherman, Clay & Co., and Kohler & Chase played the last game of the season, Sherman, Clay & Co. winning by a score of 22 to 6. A great deal of interest was manifested in this game as the championship of the Musical League was at stake. The Sherman, Clay & Co. boys lost no time in straightening out Bland's curves, and in an endeavor to stem the tide, Kohler & Chase used three pitchers without success. Among the features of the game were the hitting of Zubler and Fallon, of the S., C. & Co. team, and the fielding of Beck, of the K. & C. team.

The New I. C. S. $35 Language Outfit



One firm has ordered 300 outfits. Another firm sold outfits 24 hours after their receipt. They are ordering them all along the line wherever the outfits are shown. Why? Because they are sellers; they are profit makers; and they cater to a field that will quickly appreciate and purchase them. This outfit provides the very best method for teaching foreign languages in the world; a method that is indorsed by professors of the leading colleges and by the French, German, and Spanish Embassies at Washington. It teaches French, German, Spanish, and Italian to English-speaking people and teaches English to foreigners. The I. C. S. Outfit consists of an Edison Gem Phonograph made especially for language work, small horn, head-band hearing tube, oil can, and 25 conversational records teaching pronunciation that is guaranteed to be absolutely correct with native intonation and inflection. Accompanying these conversational records, there are pamphlet instruction papers teaching the theory of the language. Not only is this the most complete and by far the best language outfit on the market, but it is the cheapest as it sells for only $35. If you are alive to your best business interests, you will write today for further particulars—for the sake of increased business write us today.

THE COLUMBIA GRAFONOLA LINE.

All the Hornless Instruments Are Designated as Grafonolas.

In the copy of one of the Columbia two-page advertisements appearing in the last issue of The Talking Machine World an error crept in which caused more or less confusion. The mistake was made in designating the Columbia Grafonola De Luxe as a Columbia Phonograph De Luxe.

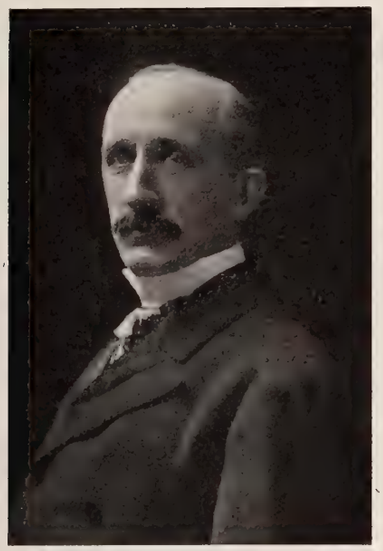
The Columbia Phonograph Co. desire to emphasize the fact that the Columbia line now includes an entirely separate line of hornless instruments all of which are classed as Grafonolas, and not graphophones or phonographs.

E. D. EASTON'S VIEWS ON OUTLOOK.

President of Columbia Phonograph Co. States That Latest Offerings of His Company Have Met with Success Beyond Expectations—Graphophone Most Acceptable Christmas Gift—Deluge of Orders for "Grafonola" Line.

Edward D. Easton, president of the American Graphophone Co., and the Columbia Phonograph Co., was interviewed by our representative during the past week as to the outlook for the coming holiday season and his comments are bound to be of greatest interest to all who are engaged in the talking machine industry. He said:

"The announcement of our new Columbia product has brought results that are even beyond our



EDWARD D. EASTON.

expectations. We have already made large additions to our force at Bridgeport and more men are being put on every week. From advance orders in hand and coming in daily we look for one of the best holiday seasons we have ever had.

"Although it is a pleasant characteristic of the talking machine industry that every season of the year brings with it unique selling possibilities, still, as may be supposed, the Christmas season is essentially our season; and why should it not be so, for can you think of a gift which would be more acceptable to the whole household on Christmas Day than a Graphophone and a well-assorted selection of records?

"We are highly pleased at the reception given to our 'Grafonola' line, and have been overwhelmed with orders. The instruments are being delivered from day to day to the full extent of our capacity, and large additions to the working force in this department are being made.

"General Manager Lyle will be back about November 15th, after a trip to all of our big agencies throughout the country. From every point he has reported the greatest interest being displayed by dealers and jobbers, and the big problem for us is to have sufficient stock to fill the orders.

"We urge all who expect to reap the harvest which the coming holiday season is sure to bring to get in their orders early and avoid disappointment."

TWIN CITY HAPPENINGS.

General Manager Wilson, of National Phonograph Co., a Welcome Visitor—Scotti Photographed While Listening to Victrola—First Consignment of Grafonolas De Luxe Arrives.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, Nov. 5, 1909.

General Manager Wilson, of the National Phonograph Co., was in Minneapolis and St. Paul last week and his presence was quite an event in the talking machine circles of the two cities. He looked over the stocks of W. J. Dyer & Bro., in St. Paul, and the Minnesota Phonograph Co., in Minneapolis, and the other houses which handle the Edison goods and was much pleased with their size and the business transacted.

Mr. Wilson promised several new ideas in the Edison goods along the lines of the new Amberola cabinet machine—records that can be played for ten and fifteen minutes. And he even hinted that the future will not be long in producing a thirty-minute record. He insists that the phonograph has not begun to reach the climax of its development and that the talking machine trade at present is really in its infancy.

While Scotti, the great baritone, was in St. Paul, the house of W. J. Dyer & Bro. prevailed upon him to be photographed in the attitude of listening to his own solos from a Victrola. He was much delighted. The house will use the photograph in its Victrola publicity campaign.

Jay H. Wheeler, northwestern manager for the Columbia Phonograph Co., is rejoicing over the arrival of the first consignment of Grafonolas De Luxe. There has been an incessant call for these goods and Mr. Wheeler says that his allotment between now and the first of the year will be disposed of as soon as they arrive. The jobbing trade has been excellent.

DRAWING POWER OF SHOW WINDOWS

Many Merchants Apparently do Not Appreciate the Value of Such Displays—Display Window Should be Like a Framed Picture.

It is strange that all merchants do not take advantage of the wonderful opportunities contained in a show window. It should be to passers-by like a framed picture and that picture should tell a story which would constitute effective advertising for the store.

The mail order houses send out catalogs several times a year to many of the merchant's patrons. If it were possible for the mail order house to make arrangements so that a separate page of the catalog describing some seasonable article would be displayed and remain before the eyes of the prospective patron for some time on each day, the opportunity from a business-building standpoint would be very great.

Why should not the merchant regard his window as similar to the printed page of the catalog? The opportunity for telling a business story and making a convincing selling talk is many-fold greater in the window than in the printed catalog of the mail order house.

Merchants should make their windows talk to their prospective customers. The actual articles are far more powerful than a printed cut. The price mark may be made more attractive in the window than the type in the catalog can make it. The invitation to inspect the goods ought to be more inviting when the goods are only a few steps away.

First, arrange the store so that the window itself serves the purpose for which it was intended and then with the assistance of merchandise make it an active salesman.

DON'T BLOCK THE WAY!

MOVE AS FAST AS THE PROCESSION—OR MOVE OUT. TAKE THE PACE OF THE COMPANY YOU ARE IN OR MAKE WAY FOR THE MAN BEHIND.

DON'T STAND IN THE WAY OF NEW IDEAS. DON'T PAUSE IN THE PATH OF BETTER SYSTEMS. DON'T SETTLE DOWN ON THE LADDER OF SUCCESS. DON'T BE A BARNACLE ON THE SHIP OF BUSINESS.

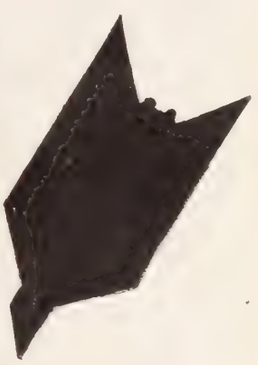
CHANGE MEANS PROGRESS. PROGRESS MEANS ADVANCEMENT.

ADVANCEMENT MEANS MOVEMENT. MOVE!

DON'T BLOCK THE WAY.

—System.

"3-IN-ONE" PRICES CHANGE JAN. 1!



But until January 1, 1910, you can continue to buy "3-in-One" at present prices. On and after January 1st, every retailer everywhere—one and all alike—will pay the *advanced prices.*

The great increase in freight rates of late years—and the higher cost of bottles, labels, packages, labor and oil has made this advance in price *absolutely necessary!*

Every jobber and every jobber's salesman in the country knows all about this new price list. They also know of our plans to enormously increase our already big advertising, so that you and every other dealer in the land will sell at least double the quantity of "3-in-One" in 1910 that you sold in 1909. Remember, we will help you more than ever next year to make sales if you'll let us. Ask about our successful plan of sampling people whose business you want—bringing them right up to your counter for this famous oil—the first, the best, the only oil for lubricating, cleaning, polishing and preventing rust.

Now—Here's Your Big Chance!

See exactly how much "3-in-One" you have on hand to-day. See how much you sold the past year. Add 50 per cent. to your total "3-in-One" sales of the last six months—and order that quantity of "3-in-One" from your jobber WITHOUT ANY DELAY! By carrying a little stock of your own of "3-in-One," instead of just a dozen or two, you have the chance of making a FINE, FAT, EXTRA PROFIT.

But—you've got to buy b-e-f-o-r-e January 1st.

3-In-One Oil Co.

NEW YORK, NOVEMBER 15, 1909.

FROM time to time suggestions have been made in the columns of The Talking Machine World urging retail establishments to hold regular meetings of attaches in order that through open discussions better results might be achieved in the selling of talking machines and records.

We believe if the entire working staff of a business establishment will meet at regular intervals for an exchange of ideas and the discussion of topics which have a direct bearing upon the business, that excellent results will be achieved, and better still, it will draw the selling force into a harmonious whole.

If young salesmen listen to remarks by a veteran in the business they will absorb a good deal which will be beneficial, and it will give them a fund of selling information upon which to draw, and which will be most valuable to them.

All men are not salesmen, and all men who are employed in a selling capacity are not salesmen, either.

It therefore naturally follows that the greater ability young men may develop in the selling line the more they are worth to their employers, and incidentally their earning capacity is materially increased for themselves.

THE trouble is to-day that too many young men are inclined to take a superficial view of selling. They do not view it seriously and they do not devote the time, intelligence and thought necessary to perfect themselves in the science of selling. They are too apt to treat their vocation flippantly when they should view it in an entirely different manner.

Retail selling is a profession and deserves to rank as such.

Now, in any other profession—medical, legal, engineering—men spend years of their lives in acquiring the rudiments of the profession before they actually begin to practise it, but in commercial life they step into a wareroom and start out immediately.

A good many of them stop right here and they never advance beyond a modest salary weekly.

Now, every man could increase his salary vastly if he would devote some of his time to acquiring a knowledge of the science of selling.

It is not all in the ability to mix, but mixing is a gentle art, and blessed is he who becomes its master.

It is not all in treating a customer pleasantly, but it is in the combination of good mixing—of affability, of impressiveness, of holding strongly to one idea, and that is to sell—to accomplish results.

Some salesmen talk too much, and it does not take some of them very long to tell how much they know.

But if they go at selling seriously and with the object of gaining every point possible, they will find in the end that they will be storing their minds with a useful lot of knowledge which will be of great benefit later on.

If there was less watching the clock, less smoking cigarettes, less loafing around the warerooms in a lackadaisical manner, there would be more better paid salesmen than there are to-day.

NOW, this criticism does not wholly apply to the talking machine line, but to every trade, and salesmanship counts for something in every trade.

We know of some men at the head of departments who are making splendid incomes, and we have known these men for more than twenty years.

They worked steadily up.

They did not watch the clock.

They did not figure that they were being imposed upon if they had to work an hour or so overtime now and then.

They did not fail to treat customers with the utmost courtesy and they did not fail to employ tactfulness at all times.

What is the result?

To-day they are occupying high positions of trust and profit.

In other words, they have made good.

Now, there is a splendid field for young talking machine salesmen, and one of the best ways to increase the interest in talking machine selling is for the retail establishments to establish regular meetings at which time the entire selling force may be present and listen to discussions on salesmanship as an art.

The Eastern Talking Machine Co., Boston, has followed such a plan successfully for some time past, and Mr. Taft, the general manager of that company recently remarked to The World that he was more than pleased with the interest it had aroused in his salesmen.

The men had not only absorbed a great deal of valuable information through an exchange of views at these meetings, but they had developed greater selling strength, and that, after all, is where it counts.

There are some salesmen to-day who are so forgetful of their employer's interest that they do not greet callers even politely.

There are some who do not understand the art of using tact in showing off certain records.

Now, we recommend to every retail talking machine company in this land to have frequent and regular meetings of the selling staff.

Try it for a while and see if the results reached are not encouraging and stimulating.

Put it to the test and try it out; that is the best way.

ANYONE who figures that the talking machine industry is languishing in the slightest should consult The World's monthly reports of the latest patents relative to talking machines and records.

A study of the illustrations and descriptions appearing in these columns will convince the most skeptical that we have a powerful lot of inventive skill which is now being concentrated upon the talking machine business.

That great man whose inventions have given luster to American creative skill, Thos. A. Edison, is still as active as ever. Notice The World's reports this month and it will be noticed that Mr. Edison figures there.

This marvelous man seems tireless.

He seems to have shown renewed interest in developing his sound-reproducing inventions.

Mr. Edison's years do not in the slightest interfere with his mental activity.

TALKING machine men should not permit window space to go to waste, for there is no part of the store so valuable for advertising purposes as a window.

The talking machine affords excellent opportunities for interesting window displays.

These, of course, should be changed at frequent intervals, for no window should be permitted to remain too long with the same adornments.

People figure, then, that the store is non-progressive, but a window decoration which is frequently changed forms at once a splendid business advertisement.

There is no question as to the advantage of window displays.

WE are drawing very close to the holidays and heavy emphasis must be placed upon trade from this time on.

The fundamental conditions are certainly satisfactory and every talking machine man in the land should do his utmost to increase the public interest in talking machines, for we must all do our share to stimulate public sentiment in talking machine specialties.

Dealers should understand, too, that if the manufacturers should withdraw their advertising from the periodicals of great circulation for a considerable time, that at once sales would immediately begin to diminish from the very time when the advertisements were canceled.

Now, the manufacturers are doing their utmost through a liberal use of great public mediums to interest the public in talking machines, and the dealers themselves should supplement this work with goodly energy and a proper use of local publications.

Then the entire plan will work out harmoniously and everyone will be benefited.

There should be a good holiday trade.

In fact, there are many who consider that the holiday trade for 1909 will be a record-breaker in many particulars.

The people have refrained from liberal buying for some time past, and now when the fever begins to work in their veins there is no telling how it will all end.

Certainly they should be interested in one of the most marvelous products of the century, for viewed from any standpoint, the talking machine of to-day is a wonderful creation.

The Edison Phonograph newspaper advertisements shown on the two following pages

published in 416 newspapers throughout the country, reach 11,000,000 out of the 16,000,000 families in the United States —55,000,000 out of 80,000,000 people, 9 times a month.

This is what we are doing in November and December to boost your holiday sales of the Edison Phonograph.

This is what we are going to continue to do through January, February, March, April and May—to enable you to keep up your selling pace right through the Spring season.

And this campaign is not only on Phonographs but on Records as well, helping you to realize new profits on sales already made.

Victor Herbert works and plays for the Edison Phonograph

Victor Herbert has written some of the most popular music produced by an American composer. The Edison Phonograph makes it available.

Victor Herbert and his orchestra is one of the best orchestras in this country. Its music is reproduced upon Edison Records.

Victor Herbert is musical adviser to the National Phonograph Company. No other sound reproducing machine has the advice of so distinguished a musician as Mr. Herbert.

This is just one of the many things which Mr Edison is doing to make the Phonograph the most perfect sound reproducer. You cannot tell by looking at an Edison Phonograph that it is small and you cannot afford one. Hear the Edison Phonograph today. Hear it play Amberol Records; hear it play Victor Herbert's music, and then you will know why Mr. Edison said "I want to see an Edison Phonograph in every home."

Edison Phonographs - - - $12.50 to $125.00

You can afford an Edison Phonograph

The price places it within reach of all. No family is too poor to have an Edison Phonograph. No family is too rich to enjoy it. Nothing that money can buy will furnish a greater range of amusement for every dollar invested.

Mr. Edison intended that his Phonograph should be within reach of everyone. He wishes to see it in every home. Prices range from $12.50 to $125.00. No one can buy a Phonograph cheaper than you can. No one should pay more for it.

The Edison Phonograph in your home would give it something that it now lacks—entertainment of the best sort at a small cost, always available and suited to everyone.

Do not forget these things. Remember that they are found only in the Edison Phonograph, because no other sound-reproducing machine is so perfect and so faultless. None other is made by the inventor of the Phonograph idea as the Edison Phonograph is.

Four minute Records for the Edison Phonograph

When Mr. Edison invented the Amberol Records he invented the longest Record ever made for a sound-reproducing machine. But the Amberol Record is not only longer; it is better. It is made from a new composition which makes a more perfect reproduction of music of the voice than any known method.

An Amberol Record in an Edison Phonograph is the most perfect reproduction of a song or a piece of instrumental music that you have ever heard.

But do not accept our statement. Go and hear it. There is a dealer near you. Hear the Edison Phonograph and compare it with other instruments before you decide. We will leave it to your judgment as to whether you can buy anything for the price that will give you so much real, genuine fun and pleasure as the Edison Phonograph.

Edison Phonographs - $12.50 to $125.00 — Edison Amberol Records (twice as long) .50
Edison Standard Records - - - .35 — Edison Grand Opera Records - - .75

Hear it yourself - the Edison Phonograph

... You cannot judge the Edison by hearing other kinds. The Edison is the sound-reproducing machine at its best. It is not a talking machine. It is a Phonograph reproducing every sound faithfully—the song exactly the way the singer sang it; the opera exactly the way the orchestra played it; the two-step exactly the way the band rendered it.

That is the Edison Phonograph as Mr. Edison makes it—the object of his constant, daily care.

When he says he wants to see an Edison Phonograph in every home, he means your home. Do you not want one there? Do you not need this amusement maker for your own sake, for your children and for your guests? Hear one today. Hear all the others too and compare. Only in this way can you know that what we say is true.

Bring your PHONOGRAPH up to date

Many people are not getting all of the entertainment they should out of their Edison Phonographs because they have not been equipped with the Amberol Reproducer.

Your dealer has an attachment which will make your Edison Phonograph play both the Edison Standard Records and the new Amberol four-minute Records, thus trebling the enjoyment and pleasure to be gotten out of it.

By means of this attachment the Phonograph will play both Standard and Amberol Records, giving a much greater range of music and a longer catalog selection from which to choose. Send on and get our booklet today because the new Records are as much superior to the old as your new Phonograph is to the old.

You enjoy music at EDISON Phonograph

You spend every year, for amusement not so good, more than the cost of an Edison Phonograph. The Edison Phonographs at all prices, will be found from $12.50 to $125.00.

No home is complete without music and enjoyment can be had without one. If you should ever hear one, you will not want to be without one. You will make every effort to get one.

Nothing gives so much pleasure with so little trouble, at so little expense, as an Edison Phonograph.

There are new Records of all kinds every month, both Standard and Amberol.

All Edison Phonographs play all kinds of Records, as well as Standard and Amberol Records, giving a wide field of music for you to choose from.

Victor Herbert wanted the EDISON Phonograph

because he believed it was the only sound-reproducing instrument that fulfilled all conditions, and because he believed that by means of an Edison Phonograph only could the widest distribution be given to good music.

Victor Herbert makes good music himself. He is now making it for reproduction in the Edison Phonograph and is himself supervising the work of his own orchestra in making the Records.

Victor Herbert's Records are but one of the many attractions which the Edison Phonograph offers you.

How about an Edison Phonograph Christmas?

Every day is Christmas when an Edison Phonograph

is the holiday maker. It is not Christmas but a time of entertainment, of peace and will?

What produces these things so much as a jolly with the addition of a few friends to the underlying vocal programs produced by an Edison Phonograph playing Amberol Records?

You can have just such a Christmas.

Hear the Edison Phonograph play some of those new Sousa Records, and you will learn for the first time what Edison has done for sound-reproducing machines.

An Edison Phonograph makes a Family Christmas

The one thing that brings joy to all the household, big and little, old and young, is an Edison Phonograph with a selection of Edison Amberol Records.

The best Christmas present is something all can enjoy. All can and do enjoy the Edison Phonograph.

If every member of the family would take the money he or she expects to use to buy presents for the other members of the family, and put it together, there would be enough not only to buy an Edison Phonograph, but also a large supply of Records.

Hear the best Talent at its best through the Edison Phonograph

The world's best entertainers, the head-liners of the vaudeville shows, the stars of the operas, the good composers, band leaders and orchestra conductors are making Records for the Edison Phonograph. All of them are represented in our catalog.

Why do they consent to make Records for the Edison Phonograph? Because they believe that the Edison Phonograph will do them real justice, giving them the most artistic reproduction.

When you listen to an Edison Record played by an Edison Phonograph, you hear the original just as it was sung or played. Can you do this with any other instrument?

How we will reach eleven million homes nine times during December.

This is the biggest newspaper advertising campaign ever put out in the interest of a sound-reproducing instrument.

It goes right into the hands of your own customers and prospects.

It is backed up by our big magazine campaign which has been increased to double pages.

And these two big advertising campaigns will drive the holiday crowds into your store in bunches, that is, if you do your part. This advertising is stirring up the interest in Edison Phonographs and Records. Let this crowd know that your store is the place to buy them.

These newspaper ads are all dated. Watch these dates and get your local ads into the same issue.

We need your local endorsement. We're doing our part. You do yours. "Team work" on this campaign means bigger business for all of us.

Get ready to take care of this holiday crowd. Write your jobber to-day.

AROUND THE ST. LOUIS TRADE.

Centennial Celebration Attracted Many Visitors to City—St. Louis Talking Machine Co. Make Cheery Report—Grafonolas in Favor—North Pole Window, Attracts—Amberola Displayed at Silverstone's—Other Items.

(Special to The Talking Machine World.)
St. Louis, Mo., Nov. 5, 1909.

The talking machine business is reported to be in very fair condition, with signs of improvement appearing each day. The recent centennial celebration here, which continued throughout the week, brought enormous crowds to the city, who from time to time crowded the talking machine stores, becoming more thoroughly appreciative of the great entertaining qualifications of these instruments.

O. A. Gressing, manager of the St. Louis Talking Machine Co., says that there is a snap and bounce to the fall business that did not show a year ago, and that all signs tend to show that previous records will be beaten. Their dealers are looking forward to an immense holiday trade and are beginning to place their advance orders for machines and records. The new Dr. Cook record, just placed on the market by the Victor Co., has met with a remarkable reception, and reorders are coming in from all the St. Louis Talking Machine Co.'s dealers. This is also true of the new and improved Victor needle and Victor Half-tone needle, which are unquestionably proving to the dealers that there is a large and growing market for these goods.

The St. Louis Talking Machine Co. are displaying in their window this week the Victor "Ready-Made" window display, which features the Dr. Cook record, and the continual collection of interested people before their window is the best proof of its attractiveness.

Mr. Gressing just returned from a ten days' trip to points in Indiana, Kentucky and Tennessee, and reports conditions and the outlook for a splendid business better than they have been in years.

L. A. Cummins, traveler for this house, had rather an odd experience in Quincy the other day. In response to an inquiry received at headquarters he tried to reach a man in an inland town by 'phone and was informed that his man was at that moment in Quincy. The only other clew he had was that the man was driving a Packard automobile, and armed with this information Mr. Cummins left the hotel to search for him. Just as he stepped from the hotel a large auto drew up to the curb. Mr. Cummins noticed that it was a Packard, and walking over to the machine he introduced himself to the surprised occupant, who proved to be the man he was looking for.

S. M. Field, of Little Rock, Ark., spent Friday, October 29, here on his way back from a short trip to New York. O. A. Reynolds, the only exclusive talking machine dealer in Illinois, outside of Chicago, was the guest of the St. Louis Talking Machine Co. for a day last week.

Manager E. B. Walthall, of the Columbia Phonograph Co., reports trade moving along nicely and steadily improving. They recently received their first shipments of the Grafonola De Luxe instruments. They sold two of the $225 class the first day they were received. Mr. Walthall is expecting a fine business on these instruments.

Geo. W. Lyle, general manager, and W. C. Fuhri, district manager of Chicago, spent Oct. 14 in St. Louis on their way west to the Coast.

E. L. Bird, formerly with the St. Louis Talking Machine Co., is now with the retail selling force of the Columbia.

The North Pole window of the Columbia Phonograph Co. attracted as much or more attention than any show window in St. Louis during the Centennial week. It represented Dr. Cook at the North Pole, which was made of Indestructible records, with the following sign: "Dr. Cook broke all records, except Columbia Indestructible records, which cannot be broken." The fact that Dr. Cook lectured one evening during Centennial week and was in the Historical parade lent additional interest to the window.

Col. F. B. T. Hollenberg, of the Hollenberg Music Co., of Little Rock, Ark., and E. S. Payne, manager of the talking machine department of the Hollenberg Co., spent Centennial week in St. Louis.

F. G. Cook, now traveling for the St. Louis office, is making a record signing new Columbia dealers, having landed 15 in one month.

Marks Silverstone, president of the Silverstone Talking Machine Co., reports business fair and improving. He recently received his first shipment of the Amberola hornless instrument of the National Co., and reports a good demand for them. J. K. Savage, formerly a local talking machine dealer here, is now with this company as traveling salesman and has just returned from a successful business trip through the Southeast.

D. K. Myers, the well-known Zonophone jobber, reports trade only fair, but is looking for an improvement.

The Knight Mercantile Co. report their business to be moving along fairly well, with signs of improvement.

H. J. Berlin, manager of the talking machine department of J. H. Buettner Co., reports their trade is moving along quite well. They have just completed several very handsome sound booths.

G. C. Hawkins, a talking machine dealer of Decatur, Ill., was a recent visitor here.

The Thiebes-Stierlin Music Co. report a fair trade in their talking machine department.

Mr. Collins, of the Universal Talking Machine Co., was a recent visitor here.

TRAFFORD CO.'S PUBLICITY.

The Trafford Co., 106 South Main street, Mason City, Ia., are great believers in publicity. One of their recent ads. in the local papers was most attractively designed and was largely devoted to featuring the Victor talking machine and Edison phonograph.

Salesmanship without courtesy belongs in a class with bricks without straw. Courtesy is the king-pin of salesmanship and without it there will be few large sales and no well-pleased customers.

SHEIP & VANDEGRIFT, Inc.

PHILADELPHIA, PA.

BUSIEST SEASON FOR YEARS

Predicted by Talking Machine Dealers in Cincinnati—Victors in Masonic Lodges—Big Call for Victrolas for Clubs and Churches—New Amberola Displayed—Columbia Co. Store Remodeled—New Grafonola Styles Attract—Concertophone Co. Incorporated—Other Items.

(Special to The Talking Machine World.)

Cincinnati, Nov. 8, 1909.

The busiest season of the year for dealers in talking machines is just coming on and indications point to an immense business. Already the inquiries are increasing daily and some sales of high-priced goods have taken place within the last week with orders for delivery in time for the holiday season. The collections have been a sore point with the trade, particularly those in the installment branches. These people seem to divert their payments to other channels.

Manager Walter Timmerman, of the Milner Musical Co., last Friday found a new way of reaching the public for the noted Victor Victrolas. This instrument was used in the Master's work of Golden Gate Lodge, No. 345, at Covington, and made a hit. Dalmaine's "Spring Song" and "Incline thine ear to me" were used at the proper time in place of the conventional masonic songs. Micha Elman's record of Chopin's Nocturne E flat and "Rock of Ages," by a quartet, were also among the records played during the evening. As a result of this innovation Mr. Timmerman has one sale to his credit and inquiries from half a dozen other sources. He intends writing the home office to get the real music for the occasion and will endeavor to introduce Victor Victrolas in the Masonic lodges of this section. Ordinarily a quartet of male voices costs $25. The hornless music is believed to be more effective and will cost less in the end.

The month of October was extremely satisfactory to the Rudolph Wurlitzer Co., as far as the retail trade in Victor goods is concerned. A number of Auxetophones were placed in restaurants and hotels and the immediate future for this style instrument gives promise of a number of sales. There was an exceptional demand for Victrolas for clubs and churches for entertainment purposes, and these entertainments have resulted in good publicity for the Victrola and Auxetophone.

The prospects for holiday trade are excellent, and already Victrolas have been sold and are being held for holiday delivery. The Wurlitzer Co. have been getting out some very attractive literature in connection with the Victrola, which has been giving results.

Mr. Hug, of the National Co., was a visitor, and brought with him a sample of the new Amberola, which was inspected by the local dealers who placed orders for future delivery with Mr. Hug. Mr. Ornstein and Mr. Goldsmith, of the Victor Talking Machine Co., spent several days in Cincinnati, in the interest of the Victor Co., and report splendid trade conditions throughout the country. Max Landay, of New York, was another visitor to the trade in behalf of the Talking Machine Supply Co.

The demand for Victrolas in the small towns brought a number of dealers to Cincinnati to select special wood in Victrolas for their customers from the big stock that the Victor representative (The Rudolph Wurlitzer Co.) carry on exhibition on the main floor of their establishment.

Mr. Ahaus, of the Victor department of the Wurlitzer Co. has just recovered from typhoid fever, which kept him from work for several months. He is now on deck. His illness has in no way affected his ability as a Victor salesman. Mr. Sigman, of the same department, has had a very successful trip through Ohio and Indiana.

The Columbia Phonograph Co. have completed remodeling their store, and with other improvements have put in several spacious and handsome booths for display purposes, these being made necessary by their increased business, specially in the high grade graphophones and records, which now hold the attention of the purchasing public.

They have on exhibition three unusually attractive new types of instruments, known as the Grafonola De Luxe-A, Grafonola De Luxe-B (with Regina attachment) upright cabineted machines, and the Grafonola-Regent, which is an entirely concealed graphophone in the form of a handsome library table.

The Grafonolas are creating intense interest in musical circles and among the higher class of people, and many sales are reported.

While the principal trade interest centers in the high-class machines and records they report a satisfactory return of business from the laboring class of people, and every indication is for the best winter's graphophone business in the history of the firm.

The wholesale business is playing a large part in their fall campaign as their policy of exclusive selling rights and 10 per cent. free advertising, backed by their complete line of goods, is appealing to every up-to-date merchant.

The Ohio Concertophone Co., which have arranged with the Victor Mfg. Co., of Chicago, for sale rights in this state, was incorporated at Columbus last Friday with a capitalization of $100,000. Half of this stock will be of the preferred class and the remainder in common. The company will have its headquarters at J. G. Greene's piano store, 424 Race street. Those who will take an active interest in the corporation are Charles J. Christie, W. A. Jones, W. W. Woodward, Joseph Krolage, W. C. Rippey, George Knorr and Mr. Greene.

SMITH BUYS OUT FRIEDRICH.

Edgar N. Smith has purchased the half interest of Walter H. Friedrich in the business of the Walter H. Friedrich Co., Parkersburg, W. Va., and hereafter the firm will be known as the Smith Music Store. They carry a full line of talking machines and musical instruments.

REVIEW OF DECEMBER RECORDS.

Issued by the Victor, National, Columbia and Universal Companies

A feature of the very elaborate list of records issued by the National Phonograph Co. for December is Bach's celebrated air on the G string, No. 307 (Amberol), which has been specially arranged by Victor Herbert for stringed instruments. As played by Mr. Herbert and his orchestra this makes one of the interesting Edison productions of the month. Another record by Victor Herbert and his orchestra is Mendelssohn's "Spring Song," No. 10,260 (Standard). This classical gem is given a very beautiful reading and makes a record of extreme interest. Other striking records are "Manhattan Beach" and "El Capitan," No. 319 (Amberol)—two famous marches on one record and played with great spirit and finish by Sousa's famous band. Another Sousa record worthy of special commendation is No. 10,272 (Standard). The United States Marine Band is also in evidence with a very excellent record, No. 10,264 (Standard), the "Lincoln Centennial March," which is played with that snap and brilliancy for which this organization is famous. The line of vocal productions listed must unquestionably attract the close attention of dealers and purchasers. It includes three new numbers by Harry Lauder (Nos. 12,065-12,070-12,080); three operatic (Amberol) records in Italian by Avezza and Daddi, and a selection from "La Boheme" (Standard) by Daddi and Reschiglian—all admirably recorded—making a goodly addition to the list of high-class productions issued by this company.

* * * *

The Columbia Phonograph Co. in their December list of records are prepared for the Christmas demand by listing two famous Yuletide numbers on double disc (No. A5,135, 12 inch), "Oh, Holy Night," by Thomas Chalmers, and chorus from the Church of the Ascension, New York (tenor solo, orchestra and harp accompaniment), and "Silent Night," sung by the Metropolitan Trio. Three celebrated and ever-popular classical and operatic numbers are listed in the ten-inch Symphony double-disc column this month (A763, A764, A765). They are sung in Italian by Giuseppe Pimazzoni, a baritone of distinction, and merit close consideration, as they constitute three records of unusual musical value. Other excellent records are two 12-inch Symphony Ao,136, A5,317), sung by David Bispham, who is heard in Il Balen from "Trovatore" and a selection from Sullivan's "Ivanhoe" on one record, and Don Juan Serenade and Gypsy John, sung by Kirk Townes. Both are baritone singers, known the world over. The general list of records contains many vocal numbers—sacred and popular—contributed by well-known singers, while the instrumental numbers include records by the Royal Regimental Band, the Banda de Polica, and others. The list this month, taken as a whole, is an excellent one and well worthy the consideration of jobbers, dealers and purchasers.

* * * *

Fifteen new Red Seal records are listed in the December list of the Victor Talking Machine Co., and they are contributed by Geraldine Farrar, soprano; Mme. Schumann-Heink, contralto; Jeanne Gerville-Reache, contralto; Antonio Scotti, baritone. Three of them are duets, two by Farrar-Scotti, and one by Farrar-Jacoby. As may be seen from the full list elsewhere these records are a most valuable contribution to the Red Seal list and must arouse the interest of those musically inclined, who have come to value these records as a most important contribution in an educational and musical way.

Other Victor records in the regular list for December which merit especial commendation are the ballet music from "Faust" (58,018), by the famous French Symphony Orchestra, and Joyce's "Songe de Automne" (52,022), which is played by the Bohemian Orchestra of London and notable for the fine quality of tone produced by the strings. There are also two records by the Vienna Quartet—"Danse Caprice," Grieg (31,756), and "Chant Sans Parole," by Tschaikovsky (5,750). This organization, which has been received in New York with such favor, has given these numbers a beautiful reading. Two excellent records by Pryor's Band are the "Hungarian Rhapsody," No. 9, Liszt (31,752), and "The Enterprisers Military March," Lampe (5,748). This Rhapsody No. 9 of Liszt's is one of the most brilliant of the fourteen which he has written, and the admirable performance of the band merits high praise. The duet for trombone and cornet from Act. IV. of "Aida," played by Arthur Pryor and Emil Keneke (31,754), is also notable for its great beauty of tone and fine expression.

In addition to the foregoing there are many other good prospective sellers included in the single-faced list, which are worthy of consideration, while the 12 double-faced records include many of the popular favorites of the day, both instrumental and vocal, which are played and sung by well-known artists. The list, broadly considered, is one of the most interesting sent out by the Victor Co. in some time.

* * * *

In the December list of Zon-o-phone ten-inch double-sided records many of the popular favorites of the day are to be found, while among the numbers of a semi-classical nature which will invite the consideration of musical purchasers are Moszkowski's "Serenade" (5,559), which is backed with Lincke's "Festival March." A flute and clarinet duet and a flute and viola duet (5,563) are also records of very commendable compositions which should become popular. Two other instrumentals which are excellent are the "Second Hungarian Fantasia," and that now famous march, "A Triumphant Banner" (5,560). In the vocal list are two numbers which should appeal to Christmas purchasers—Gounod's "Nazareth" and Adams' "Christmas Song," sung by Thomas Chalmers (5,564). There are also a number of trio and minstrel selections which should greatly please those inclined to compositions of that ilk—and they are legion.

RECENTLY INCORPORATED.

The American Cinephone Co., of New York, have been incorporated at Albany, to deal in musical and talking machine, moving picture apparatus, etc. Capital, $250,000. The incorporators: Isadore Finkler, Leon Kauffman, Stuart M. Kohn, all of 2 Rector street.

* * * *

The Frank S. Bump Co., of Binghamton, N. Y., have incorporated with the secretary of the State at Albany, to deal in talking machines, automobiles, bicycles, sporting goods, etc., with a capital of $10,000. The incorporators are, Frank S. Bump, Maud L. Bump and Austin S. Bump.

DEATH OF MRS. WM. H. LOCKE.

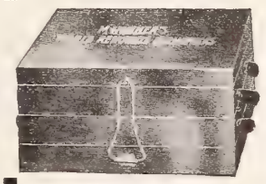
Many in the talking machine trade will regret to hear of the death of Mrs. Wm. H. Locke, wife of Wm. H. Locke, manufacturer of the one-time famous Searchlight horn, and later of a collapsible amplifying horn that is now equally well known to the trade. The sad event occurred recently.

W. D. ANDREWS' NEW STORE.

W. D. Andrews, the well-known talking machine dealer of Buffalo, N. Y., has opened a new store at 632 and 634 Main street, that city, in charge of Ray E. Crandall. The store is handsomely fitted out and a large line of Edison and Victor machines and records are carried in stock.

It doesn't always take a far-seeing man to see his own finish.

The C-D-C Device Will Sell the Harmonicas for You, Mr. Dealer



No. 400, Closed

Place this Cabinet and Harmonica Assortment on your display counter and watch the instantaneous results.

The C-D-C DEVICE consists of a three tray cabinet of the best seasoned wood, beautifully finished in a dark mahogany piano polish, and when closed resembles an elaborate jewel case. Owing to its novel arrangement and peculiar construction, it can be thrown open and closed in a moment's time. When the Cabinet is open the Harmonica display is exceptionally attractive, exhibiting its entire contents of 38 Harmonicas at one time, and showing the instruments to a great advantage. When closed, the complete Cabinet occupies a minimum of space (10¾ in. wide, 9¾ in. long, 5¾ ins. high), being much less than a foot square. Thus, it will be seen what an ideal self-selling proposition this new Collapsible Display Cabinet is. The Cabinet costs you nothing, and besides you are the gainer by over 50 PER CENT. cash profit on your investment. The C-D-C DEVICE contains 38 pieces of the very best selling

Hohner Harmonicas

assorted in 16 different styles, all keys, and can be retailed at the following prices:

Assorted Harmonicas

16 pieces to retail at	25c.	$4.00
12 " " " "	35c.	4.20
10 " " " "	50c.	5.00
	Total retail value,	$13.20

YOUR INVESTMENT

$8.75 { Per Cabinet and Harmonica Assortment.

YOUR GAIN

Over 50% Cash Profit and a Superb Display Cabinet.

IMPORTANT VICTOR MOVES.

List of Fifty Double-Faced Records of Standard Stable Records—Will Test Selling Value of Double Versus Single-Faced Records—New Exchange Proposition.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 4, 1909.

An important move by the Victor Talking Machine Co., Camden, N. J., concerning their new list of double-faced records and cut-out exchanges is embodied in the appended letter sent the trade last week by General Manager Geissler:

"To the trade: We beg to call the attention of the trade to two very important moves on the part of the company, in the matter of records, which will have a very great influence upon the Victor record trade, in both advancing the sales thereof and by means of our new exchange system on 'cut-out' Victor records, in giving assurance to the trade of the stable value of Victor record stock.

"Proposition No. 1: First—Let us call your attention to a list of newly double-faced records—fifty (50) in all—forty-five ten-inch and five twelve-inch, on which list of records we will be ready to begin shipments to our far-western distributers on November 1, proceeding with shipments easterly therefrom in the endeavor to make simultaneous deliveries. The opening day at wholesale will be Monday, November 15; the opening retail sales day will be Tuesday, November 16.

"In doubling up this list of standard stable records this company is making the first intelligent experiment that has ever been made in America, or, in fact, in the world, to find out the relative selling value of the double-faced against the single-faced record, for we shall at the same time continue to catalog all of these records separately as single-faced records. There is no doubt but that this list of standard sellers will have an enormous sale in double-faced form, and especially so in the beginning, but we, nor no one else, can tell exactly the influence that the double-facing of these records will have upon the sale of the same single-faced. Our statistics at the end of six (6) months' time will give us satisfactory data upon which to base our actions relative to the withdrawal of certain of these records from our catalog.

"Proposition No. 2: After January 1, 1910, the date upon which the records on the list of October 1, 1909, actually become 'cut-outs,' we intend to permit, according to the provisions of an exchange proposition to be put out in detail at that time, the trade to return any 'cut-out' records appearing on the above two lists, at their full value, for exchange through their distributers, at any time that suits their convenience during the six months' period between January 1, 1910, and June 30, 1910. Please remember that these records are not 'cut-outs' so long as they appear in our current catalog. These notices of future withdrawals are sent out months in advance to enable the trade to sell these off to the public and get their costs and profits out of them before they are eliminated from our catalog. We hope that the trade will use extra efforts to dispose of these records that become 'cut-outs' and not put them aside (as we understand some do) to be returned to the factory."

POSITION THROUGH VICTOR RECORDS.

Engaged by Director Dippel on the strength of gramophone records of his voice in several operas, Farsell, a Swedish baritone, arrived on November 4 to take his place with the Metropolitan Opera Co. The gramophone records were sent here from Paris by Farsell at the request of Herr Dippel. After hearing them, he was so charmed that he cabled an offer to the Scandinavian.

GRAFONOLAS FOR TRAINS.

The demand for Grafonolas is declared by the officials of the Columbia Phonograph Co., General, to be astonishing, so much so that a congestion is feared. The Grafonola Regent or library table machine seems particularly popular with steamships, clubs, etc. A western trunk line is negotiating to equip their de luxe trains with the Regent, and the deal, which is for a large quantity, may be closed in the near future.

HERE'S A CLEVER YOUNGSTER.

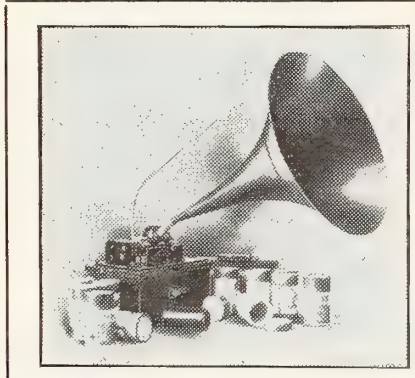
Max Landay Enthuses Over Fred W. Graves' Clever Son Who Is a Credit to the West.

When Max Landay, of Landay Bros., New York, was in Portland, Ore., on his recent selling trip for the Talking Machine Supply Co., he was the guest of Fred W. Graves, of the Graves Music Co. Writing of the pleasant incident, Max says: "I was entertained by Mr. Graves and his beautiful wife at their magnificent home and greatly pleased with their son, Fred W., Jr., a clever youngster, a year and nine months old. He is certainly the brightest boy I have ever met, as he can play the Victor talking machine to perfection. He is the coming talking machine man of the coast, and in that capacity will be heard from."

SOUTH AMERICAN TRADE GOOD

Says Walter Stevens, the National Co.'s Export Manager—More Active Even Than in the United States—Amberola in Demand.

In speaking of foreign business Walter Stevens, manager of the National Phonograph Co.'s export department, said: "Trade in South America is very good; in fact, in all the Spanish-American countries. For a while it was rather slow in Mexico, but now sales are increasing. On the whole foreign business is more active than it is in the United States. There seems to have been a reaction here; or, in other words, business is not up to expectations in the regular lines. The Amberola, however, has proven a great success, and the only thing I fear is lack of stock.



Lin-o-tone Horns

The horn that is made of Linenoid, **in one piece,** without seam or joint. This accounts for the delicate tone and expression that everyone admires in a Lin-o-tone and that makes it so popular with that class of phonograph users who are particular and want the best possible results they can get from their machines.

Actual Sales

VERSUS

Possible Sales

Have you ever thought Mr. Dealer that you are only selling talking machines to the people who are satisfied or are willing to make themselves satisfied with the talking machine as they know it?

Are you not aware that there is a vast number of people, right in your town, who would prove customers, and **the best class of customers,** if you could overcome their objections to the talking machine as it now appeals to them?

If you could get at the reasons for their prejudice would you not find them voiced about as follows:

"The tone is too loud for my home."

"I could enjoy it were it not for the scratch and noise."

"The records won't last," etc., etc.

"B. & H." FIBRE NEEDLES absolutely eliminate all these objections. With their use the talking machine appeals to the lover of soft, beautiful, artistically produced music.

They do away entirely with the scratch and noise of the steel needle.

The tone is just right for home use.

They preserve the records PERMANENTLY.

We have many letters in our files from dealers stating that because of the Fibre Needle **they have sold machines to people they have hitherto been unable to interest.** You can do the same.

Now is the harvest time of the year. Take advantage of the full sales possibilities, and reach for the class of trade now denied you, by handling **Fibre Needles.**

Write at once for samples, prices and full details.

"B. & H." Fibre Mfg. Co. 33 W. Kinzie St., **Chicago, Ill.**

The Talking Machine Business Coming Into Its Own Again

Says the President of the National Phonograph Co., Who Writes a Stimulating Article About Present and Prospective Conditions—Success Can be Won by United, Concerted Action, and by Enthusiasm and Optimism on the Part of Manufacturers, Jobbers and Dealers.

By FRANK L. DYER

Out of the hustle and bustle of preparation to meet the demands of the holiday trade, we can profitably spare a moment or two for reflection upon the developments of the year that is fast drawing to a close.

Thanksgiving, the harbinger of "The Season," is already knocking at our doors. This year more so than at any time since the inception of the talking machine industry, we have all—manufacturer, jobber, dealer—cause for universal and heartfelt rejoicing. We have passed through the most grueling period in the history of our existence. Out of a siege of industrial adversity that shook the financial world to its very foundations we have emerged triumphant, with not only unimpaired but renewed vigor.

The stability of the talking machine industry has been established before the world. The reason for its survival is the necessity to mankind of good music and entertainment, and the universal recognition of the fact that for versatility and quality of entertainment the phonograph to-day has no superior. The rapidity with which the industry is recovering its equilibrium can be attributed to but one reason —optimism. Optimism is the influence that sustained us throughout the entire period of depression. Had we not all shared that spirit we would not to-day be in a position to indulge in cheerful retrospect upon the past.

The manufacturers set the example; jobbers and dealers with but very few exceptions followed it. At the time when the future looked least encouraging the manufacturers strove hardest to lend a cheerful aspect to the situation, and by their unprecedented example in spending huge sums for the improvemnt and advertisement of their products infused a spirit of corresponding faith and activity into the other branches of the business. The lesson of that example must not be lost.

And so, with the certain knowledge of our permanence among the industrial institutions of the world, we welcome the advent of Thanksgiving this year as never before; not unmindful of the fact, however, that with that knowledge comes a corresponding responsibility upon all our branches. Our business is on a high plane at present; we must maintain it at all hazards. We are members of one great family, we manufacturers, jobbers and dealers; our respective branches form a commercial trinity whose perpetuity depends upon our loyal allegiance to one another. We must work in intelligent harmony if we are to go on to further success.

The manufacturer must continue to improve the standard of his product. He must seek new ideas and experiment in many channels in order to attain still further perfection in his line. That's his duty to the trade and to the public. He must create publicity for his goods by general advertising. The jobber and dealer must supplement the work of the manufacturer in their respective domains by intelligent concerted effort. They must give him the benefit of their confidence and impressions. That's co-operation, the phonographic synonym of success.

The arrival of the holidays at a time when business is improving by leaps and bounds is most fortunate for the talking machine dealer. It places him in a position to entrench and fortify his business more thoroughly and impregnably than ever before. It is the opportunity of all opportunities. The holiday trade this season will be big. Everything indicates it. The improvement in all lines of business is going to reflect itself in the proverbial generosity of the American public during the holiday period. It is not necessary to descant upon the peculiar attractiveness of a phonograph as a holiday suggestion; it speaks for itself—louder and more convincingly during the holidays than at any other time of the year. It remains only to urge the dealer to go after the holiday trade more aggressively, persistently *and above all, earlier than ever before.*

We have endeavored to emphasize the absolute necessity for early preparation in our talks with dealers. It is not necessary or at all advisable to overstock, but many dealers make the mistake on the other side, and live to repent it afterwards. There is no danger in a liberal provision; the phonograph has a consistent selling value all the year round. An aphorism that I culled from a house publication recently impresses me as being an excellent motto for dealers to follow at this particular time. It goes like this:

> "Cowardice, too frequently mistaken for conservatism, is the cause of more business failures than bravery, too often considered mere recklessness."

There is a world of logic in those words, and every talking machine dealer should ponder on them.

FRANK L. DYER.

The necessity of placing holiday orders early so as to give the manufacturer an opportunity to approximate his requirements is another subject that we have dwelt upon at length. It is better to be on the safe side by ordering early than to run the risk of bitter disappointment in an eleventh hour "rush" order. There are many subjects that should engross the attention of the wide-awake dealer at this time, but they have been so thoroughly and often covered that it seems superfluous to repeat them now. Revision of mailing lists, concerts, advertising, window displays, etc., are all familiar subjects whose importance cannot be overlooked or delayed. Window-displays are the lodestone of the holiday trade and the dealer whose originality provides a unique window will have cause to congratulate himself afterward.

Only five or six weeks more and we will be speaking of the holiday trade in the past tense. In the brief interval that still remains, every dealer should be "up and doing" in order to be able to employ that form of speech to his own satisfaction.

That the talking machine business is beginning to come into its own again, there isn't the slightest doubt. We of the National Phonograph Co. can cheerfully subscribe to the truth of that statement. Our machine and record sales are climbing fast. While it of course follows that a very large percentage of this is due to the impetus of the holiday prospect, a comparison with our sales during the corresponding period of last season convinces us of a satisfactory general improvement. We are further impressed by the significant fact that eastern localities, which of necessity bore the brunt of the financial depression, are now contributing generously to the grand total of orders.

The demand for our popular-priced machines increases daily, and we are preparing for a big business in those types during this season. Amberol attachments are moving very satisfactorily at the present time and will become a more important factor in our sales column when dealers in the eastern States resume their former aggressiveness. We are beginning to relieve the Cygnet horn situation, which has been a serious proposition with us because of the volume of orders, and the inability of horn manufacturers to supply our requirements.

The new Amberola has surprised us by the enthusiasm it has inspired among the trade and public. It is a beautiful machine in every essential and we are immensely proud of it and enthusiastic for its future. Its ready reception proves conclusively that the phonograph has escaped the classification of talking machines in the eyes of the public.

Altogether, the prospect of a splendidly successful season is growing brighter every day. Every natural cause is on the side of continued prosperity. Manufacturers, jobbers, dealers—let's all co-operate, and by united, concerted action, by enthusiasm and optimism in our individual work, make this season so memorable for its success that next year's Thanksgiving will be offered up not for survival but for affluence.

CHANGE IN THREE-IN-ONE PRICES.

The Three in One Oil Co., manufacturers of the famous Three in One Oil, have just sent out notifications to the trade all over the United States that on January 1, 1910, a new schedule of prices goes into effect.

The new prices at which dealers will buy from jobbers are a little higher than in the past. This change is necessary because of the increased cost of all commodities during the past few years. Freight rates are much higher. The cost of raw materials, labor, labels, bottles, cartons—in fact, everything that goes into making a complete package of Three in One—has increased. To preserve their manufacturing costs at a safety point and protect themselves, the Three in One Oil Co. have found it absolutely necessary to increase the cost both to jobbers and to retailers. This was done only after due consideration, and when it was demonstrated that there was no other way. If all retailers will simply adhere to the established and advertised retail selling prices the change in price will be a benefit to them rather than otherwise. There is never any excuse for cutting prices anyway.

The Three in One Oil Co. also announce that beginning with January 1, 1910, they will put a new size package on the market, eight ounces, which will retail for 50 cents. This contains eight times as much oil as their 10-cent package, and three and one-half times as much oil as their 25-cent package. There has been an insistent and growing demand for a considerable time for a larger size package for use in factories, offices and large households. Therefore, in putting up a new "factory or household size" at 50 cents indications are that large sales of this size will result.

In changing the prices and putting out this new package the Three in One Oil Co. amply protect the jobber and the retailer in the way of profits, as they always have done in the past.

M. Hirsch & Son, music house, Holyoke, Mass., have become exclusive Columbia dealers, the negotiations having been closed by B. Feinberg, the special representative of the Columbia Phonograph Co.'s wholesale department. A fine initial order was placed for goods.

FROM OUR EUROPEAN HEADQUARTERS

TRADE HAPPENINGS IN LONDON.

Tightness of Money Due to Advancement of Bank Rate to 5 Per Cent. Checks Business Activity—Day of Cheap Machines About Over—Copyright Situation Now at a Standstill—Decreased Profits Evident in Gramophone Co. Report—Beka Records for November—Protest Against Proposed Australian Patents Bill—To Typewrite Telephone Messages—New Gramophone Records—Columbia Co. Report Big Sales—Zonophone Co.'s Popular List—Rena Co.'s Choice List of New Records—H. Lange's Successor's Creditors Meet—Premier Co.'s New Five-Minute Disc a Success—Other News of the Month.

(Special to The Talking Machine World.)

London, E. C., Nov. 5, 1909.

General trade activity has received somewhat of a check by reason of the rapid advancement of the bank rate to 5 per cent. and consequent tightness of money this last few weeks, but even so, it has not materially affected talking machine sales, although from some quarters complaints have reached me to the contrary. On the whole, however, I think we have no particular cause to be anything but optimistic, for the season is opening up remarkably well, considering the many outside influences at work. Nevertheless, it is useless to attempt to disguise the fact that much uneasiness obtains in the whole trade. Litigation, covering several important points, looms large upon the otherwise cloudless horizon, and the idea prevails, unfortunately in too many directions, that trade will—is in consequence bound to suffer.

Without expressing any opinion on the merits of the questions at issue or departing from our always strictly impartial attitude in such matters, I think there is little cause to do other than help business to progress much as usual. Anyhow, scaremongers are to be shunned. Let each man judge the position for himself, and act accordingly. As I reported last month, traders here are gradually coming to recognize that the days of the cheap machine are over, gone, maybe, forever. There was little profit in selling it, and still less satisfaction to the purchaser. Successful trading is dependent upon successful goods. If there were no cheap, always-wanting-repair machine on the market, we should lose one of the chief causes of failure in business, especially among dealers. There is more satisfaction in selling one good machine than a dozen rubbishy ones, and more profit, too. Bad instrument, bad customer; good instrument, good customer. Is it not so, Mr. Dealer? A certain manufacturer of this city told me the other day that he was making two reliable models at three and five guineas retail, but the latter's sales in comparison with the former were three to one. That is evidence of a great change for the better. It is a sign which means steadier business and brighter prospects for all engaged in the talking machine industry.

Their Debtors' List.

According to the Gramophone Co.'s report, no less a sum than £196,042 is itemized against debtors!

The Copyright Situation.

Copyright matters are now at a standstill. The Board of Trade Committee have interrogated dozens of witnesses selected from the ranks of the talking machine and piano player roll makers, and we are all now anxiously awaiting for some information as to the committee's findings. Their report, however, will not be made public probably for some months yet, in view of the delay necessarily involved by such a chaotic situation in political circles as at present prevails. At the commencement of the controversy we opened our columns to the opinions of manufacturers, who, without exception, whole-heartedly opposed the unjust demands which the publishers seek to levy under the guise of a specious pretext. We are quite prepared to look at the question through the other man's spectacles, and admitting the sentimentality of his claim, we contend that it should rest at that and no more. For this reason, any instrumental selection or song placed upon a disc or cylinder record which sells by thousands at once popularizes that particular piece far in advance of anything attained by the publishers' methods. The record takes the credit, while the composer benefits by selling greater quantities of his music than he would do without the aid of record publicity. That, to our mind, is a fair exchange, and should be satisfactory to both sides. Several publishers, not to mention the large number of composers, who are in full agreement with this attitude, deplore any suggestion of hampering an industry which so materially helps the sale of sheet music.

Such is the position of this matter at the present time, and we trust it will be for many years unaltered.

Gramophone Co.'s Annual Report.

The annual report of the Gramophone Co., Ltd., presented to the meeting on November 2, states that the result of trading is a credit balance of £58,804, which with the amount of £644,626 brought forward from the last balance sheet makes a total of £703,430. After deducting income tax, directors' fees, bonus of 10 per cent. paid on ordinary shares for year ended June 30, 1908, interim quarterly dividends, £1,267 decrease in value of investments, a credit balance of £566,313 remains. It is not proposed to pay a bonus on the ordinary shares for the year ending June 30, 1909, and this balance will accordingly be carried forward to next year. The meeting will be asked to authorize the payment of interim dividends on the ordinary and preference shares at the rate of 5 per cent. per annum, less income tax, by quarterly payments for the year ending June 30, 1910. Depreciation, at adequate rates, has been written off the warehouse, factory buildings, machinery and plant, furniture, etc. As last year the matrix account stands at £30,000. The reduction in net assets is accounted for by the payment to shareholders of the bonus in respect of the year ended June 30, 1908, and by the difference between dividends authorized and paid during the past year and the actual profits earned in the same period. The decrease in profits is attributed to depressed trade conditions generally and competition in foreign branches, and particularly to reduction in gross profit in Russian territory. On their appointment to the joint management, filling the vacancy caused by the retirement of T. Birnbaum, Alfred Clark and S. W. Dixon will be proposed for election as directors. The retiring directors, Romer Williams and Walter H. Long, offer themselves for re-election.

Beka Publicity

A window bill bearing the words "Beka for Real Music" has just been issued to the trade. This and other literature will upon request be forwarded to any dealer desirous of making his shop attractive. The November list of 10-inch double-sided Beka records is a particularly good one, and contains twenty selections, from which I would mention the following: "Uhlan's Call" (march), "Convivial March," "Tresoro Trio" (waltz), and "The Merry Widow Waltz," all played by the Beka London Orchestra, ably conducted by Julian Jones; "In the Evening by the Moonlight, Dear Louise," and "Sweet Adeline," by James Hudson, who also gives us that popular song, "I Like Your Old French Bonnet"; Bert Alvey is responsible for three comics—"Has Anybody Here Seen Kelly?" "With the Little Wigger-Wagger in My Hand," and "Exercise"; a very nice flute solo by H. Fransella is "Valse" (Godard), and "In Cellar Cool" (with variations); H. Taylor (clarionet) makes a splendid record.

Offense Under the Companies Act.

Giving judgment in the case of David Rees (director of the defunct British Sonogram Co.), charged with an offense under the Companies act, the magistrate stated that taking into consideration Mr. Rees' previous honorable character, and that others were perhaps to blame more than he, a nominal sentence of eight days only would be imposed, which entitled Mr. Rees to be discharged forthwith.

The Premier Manufacturing Co.

THE POINT, WANDSWORTH, LONDON, S. W., ENGLAND

FROM OUR LONDON HEADQUARTERS—(Continued.)

American Band in London.

The American National Guard Band of fifty performers won a magnificent ovation on the conclusion of their first performance at the Aldwych Theater, this city. We have as yet seen no issue of records by this fine instrumental organization, and are wondering which company will secure their services first.

Depends on Whose Corn Is Pinched.

On the grounds that it would not pay to build works there, a deputation representing the London and other chambers of commerce has waited upon Captain R. M. Collins, London representative of the Australian Commonwealth, to oppose the Australian Patents Bill, which makes compulsory the working of patents in that country at the risk of their revocation.

Death of Mrs. J. L. Young.

The talking machine trade will learn with deep regret of the death of Mrs. J. Lewis Young, who passed over on the night of October 24, after a very long illness, borne with exceptional fortitude. To Mr. Young we extend our heartfelt sympathy in his great loss.

The Current Twin List.

In the current "Twin" list will be found a selection of titles suitable to Christmastide. Other fine records also figure in this impression.

List of Foreign Traders.

The Commercial Intelligence Branch of the Board of Trade has a special list of firms or traders to whom, as a help in foreign competition, information of a confidential nature likely to be of interest is forwarded direct. A recent report states that the firms on the register at June 30 numbered 1,321.

New Company Registered.

Phonogrand, Ltd., is the name of a new company registered here. Its capital is £10,000 in £1 shares.

New Telephone Device.

A device has been invented by Mgr. Ceretani which enables messages sent over a telephone line to be typed electrically by a typewriter. The invention can be attached to any ordinary telephone so that a written or verbal message can be sent or received at will.

Caruso in Kilts.

Signor Caruso has caused considerable interest by the announcement that he has purchased a national Scottish costume, including a kilt, for use when performing in "Lucia di Lammermoor" in New York this season.

Band Off to South Africa.

The Besses o' the Barn Band, which has made some splendid records for English companies, sailed October 21 for a year's tour in South Africa, Australia and New Zealand, and perhaps the Far East. They will give approximately 500 performances.

Gramophone Co.'s Strong List.

In place of the band records which have been so familiar a feature of recent Gramophone lists, this month's impressions contain a not unwelcome selection of fine orchestral pieces by musical combinations of high repute. The issues comprise "Morning" ("Peer Gynt"), and also Griegs' "Anitra's Dance" and "In the Hall of the Mountain Kings" ("Peer Gynt"), both by the New Symphony Orchestra; Gems from "The Arcadians," by the Bohemian Orchestra (with chorus); ballet music, "Faust"—No. 1, "Valse des Nubiennes"; No. 2, "Adagio"; Nos. 3 and 4, "Danse Antique," and "Variations de Cleopatra," all three records being excellently presented by the Paris Symphony Orchestra, while the Metropolitan Orchestra is responsible for "Hobomoko" (Reeves), and "Glow-worm Idyll" (Lincke); "I Hear You Calling Me," by Evan Williams; "Only for You," John Harrison; "Four Jolly Sailormen," finely sung by R. Kennerly Rumford; "Honor and Arms," Robert Radford; "The Lark Now Leaves," Miss Agnes Nicholls; "Bel Raggio" (from Rossini's "Semiramide"), beautifully expressed by Miss Amy Castles; "Printemps qui Commence" (Saint-Saëns), dramatically rendered in a magnificent manner by Mme. Kirkby Lunn; "Hullo In In," Miss Margaret Cooper; "Maying," duet by Miss Perceval Allen and John Harrison; "The Army and Navy," duet by John Harrison and Robert Radford; "Good Night, Thou Glorious Sun," quartet; "Concertino" (with orchestra), a well-executed clarionet solo by Charles Draper; "Moonlight Sonata" (Beethoven), Parts I and II (separate records), by Mark Hambourg at the piano; Handel's "Largo," by instrumental trio, harp, violin and 'cello; "Drowsy Dempsy," a good banjo record by Vess L. Ossman; and the story of a football match as told by our old friend Harry Lauder in "The Referee," completes a remarkably good list.

An American Visitor.

E. A. Hawthorne was one of the distinguished visitors to this city last week. He returned to Americe on the 23d.

Big Columbia Sales.

The Columbia Co. report big sales of the "Prince" model graphophone, which sells at £2 12s. 6d. retail. It is described as a better machine than before at a lower price. This season's model is fitted with the same motor as was used formerly in the 6 guinea instrument. Truly remarkable value for the money, and the trade have not been slow to recognize it. Other cylinder machines, and disc also, are selling very freely, while in records there is quite a boom.

Talking Machine Wedded to Packet of Tea.

In the course of time the talking machine has been the subject of caricatures in some of the comic papers, and no doubt, like many other good things, it lends itself, or rather is appropriated to, the use of advertisers of divers wares. The latest association in this respect is Tea. T is good and so are T. M.'s; in fact, they make good associates. But to the point. Glancing through my newspaper the other day I came across what

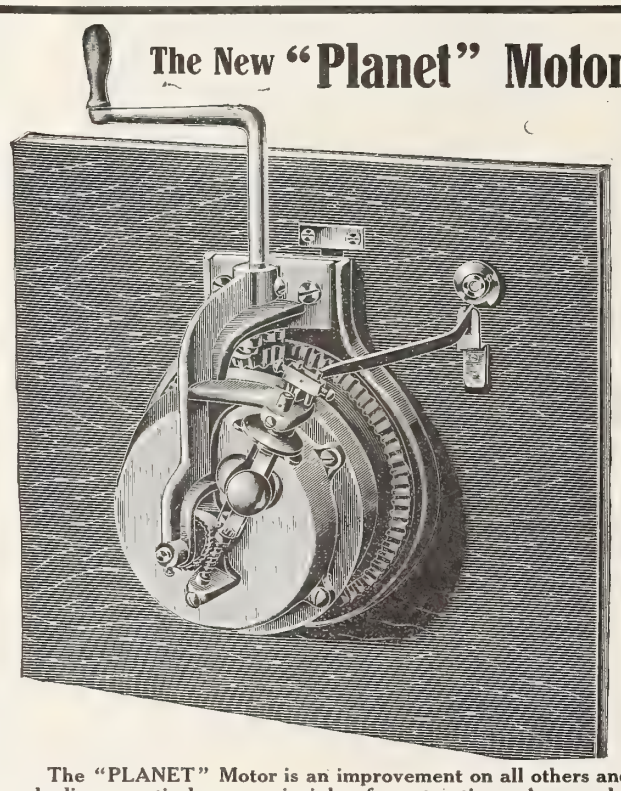
The New "RENA" MACHINES

"RENA" MACHINE, No. 4, £5 10s.

Cabinet: Solid Oak, size 16 in. by 16 in. by 8½ in. Fitted with "PLANET" 16-minute Motor. Self-regulating SPEED INDICATOR. Nickeled Aluminum TAPERED TONE ARM. Improved Sound-Box, fitted with Patent Needle Clip.

Prices range from £2 10s. to £11 10s.

The New "Planet" Motor



The "PLANET" Motor is an improvement on all others and embodies an entirely new principle of construction. As may be seen above, the gearing is horizontal, running parallel with the turntable and so minimizing friction. All the gearing is encased and runs in a GREASE BATH. It is DUST-PROOF, therefore always CLEAN and SILENT-RUNNING. It is also CLIMATE-PROOF. So simple that there is nothing to go wrong. All "PLANET" Motors are guaranteed. "PLANET" Motors are fitted "RENA" Machines from £3 10s. upwards.

Rena Double Sided RECORD

The Records that are known by "Every Record a Picked One!"

10″ double sided 2/6

RENA

12″ double sided 4/-

The biggest sellers in England.

No records have ever achieved so instantaneous and huge a success, wherever they have been introduced, the sales have been phenomenal and steady. Rena Records are more musical, of better tone, superior volume, and infinitely more understandable than the records of the past. People say they wonder how they can be made for the money. The latest success is the Rena.

12″ double sided Record at 4/-. The Artistes presented on this magnificent series include: Miss Ruth Vincent, Mr. David Bispham, Miss Margaret Lewys, Mr. John Bardsley, etc. etc.

Such value, indeed, such wholly remarkable records are absolutely unprecedented in the history of the trade.

Catalogs of 10″ and 12″ Rena Records will be sent post free upon application.

WRITE FOR FULLY ILLUSTRATED LISTS.

"The Motor That Runs In Grease."

FROM OUR LONDON HEADQUARTERS—(Continued).

at first I took to be a fine talking machine advertisement. Investigating further I found it was an advertisement for Maypole Tea. Underneath the heading, "Maypole T Speaks for Itself' was displayed an illustration of a machine, complete in all details, having for the case a packet of tea. True, the tone arm looked a bit rocky and the sound box appeared to be of rather doubtful construction, so much so as to raise grave doubts of its ability to give forth any speech whatever, but there it was. I'm a strong advocate of tea for talking machine traders, so think what you like of the designer of this illustration, but don't blame the tea. Another cup, please!

Some Popular Selections.

Zonophone records, especially the 12-inch issues, have been the object of much praise by the trade generally, and the November list, rich in all that is best from the world of music, apparently tops the lot. Here are a few selections: 12-inch, "Doctrinen Waltz" (Strauss), played by the Zonophone Concert Band; "The Tale of Paris," by Billy Williams, 10-inch; "Bonnie Leezie Lindsay," Harry Lauder; "'Tis the Day," Ernest Pike; Tosti's "Good-Bye," delightfully rendered by Mme. Deering; and "Roses of the South," by the Black Diamonds Band.

A Matter of Detail.

An interesting action came to light in the courts recently, where Justice Warrington had for hearing the case of the Gramophone Co. against the Magazine Holder Co., of Leeds. Plaintiffs alleged an infringement of a cabinet design, which defendants denied. After the usual arguments by counsel, his lordship said he found that there were sufficiently substantial differences between the defendants' cabinet and the registered design to prevent him holding that the defendants had applied to their article the plaintiffs' design or any obvious imitation thereof. There would be judgment for the defendants with costs.

Rena Co.'s Batch of Records.

The Rena Co. send me for review a batch of records from their current lists, to which that now well-known catchphrase "Every Record a Picked One" is particularly applicable. In point of quality, too, Rena records are exemplary, inasmuch as for purity of tone they are unexcelled. And it is no wonder therefore that although the 12-inch double-sided disc was issued as recently as October 5, their success has been instantaneous. I note with pleasure that in strong contrast to the all too common practice of issuing good records in flimsy paper coverings, the Rena 12-inch is put up in a thick but neat envelope made to stand ordinary wear and tear of usage.

Notwithstanding the issue of no less than 45 of the 12-inch double records last month, it has been found necessary to put up a special supplement for November, comprising six well-chosen records. And included in these is one of the most perfectly recorded selections I have ever heard, and truly "Barcarolle," from the "Tales of Hoffman" is indeed a wonderful record in all respects. The following are also recommended to dealers with every confidence that they will demand a big sale anywhere: 12-inch record, double, at 4s.—Overtures "1812" and "Rienzi," by the Royal Guards Band; "The Phantom Brigade" and "Virginia House Warming," by Hayden Orchestra; "Kathleen Mavourneen" and "Believe Me, If All Those Endearing Young Charms," by David Bispham; Schubert's "Serenade" and "At King's Lake," both by violin, harp and flute trio; "Lo, Hear the Gentle Lark" and "Sweet Bird," by Miss Ruth Vincent; "Thora" and "Roses," by John Bardsley. Ten-inch double at 2s. 6d.—"To My Mother, Serenade," and "The Herd Girl's Dream," violin, harp and flute trio; "Whispering Flowers" and "Spring Song" (Mendelssohn), by the Rena Orchestra; "Our Miss Gibbs," selections 1 and 2, by Empire Military Band; "Love's Treasure Waltz" and "Poppies," by the Empire Symphony Orchestra; two splendid organ solos of Mendelssohn's "Songs Without Words," in A and E; "Tell Me, Mary, How to Woo Thee," and "I Hear You Calling Me," by Thomas Jackson, completes a remarkably fine selection.

Meeting of Creditors.

H. Lange's Successors, Ltd. Notice was issued on October 23 calling a meeting of the creditors of this company to be held on November 5 at 58A Wells street, Oxford street, this city. Hicks, Arnold & Mozley, 35 King street, Covent Garden, W. C., solicitors for Frank Browning Wilson and Michael Kaiser, voluntary liquidators. I understand that a scheme of reorganization is to be proposed at this meeting.

Fleet & Rees (Joseph William Fleet and David John Rees), 84 Pentonville Road, London, phonographic record and accessories manufacturers, August 26. Debts by D. J. Rees.

No Longer Connected.

Karl Maurice is no longer connected with H. Lange's Successors.

Messrs. Lockwoods Have Removed.

Messrs. Lockwoods, the only exclusive Twin and Zonophone factors, have removed from Moorfields to 43 City Road—the old premises of the Zonophone Co.

Catalog for Colonial Trade.

A new illustrated catalg, replete with all the latest in talking machines and accessories, etc., has just been issued for the Colonial trade by Barnett Samuel & Sons, Ltd.

Records of "The Merry Peasant."

The first records yet issued of selections from "The Merry Peasant," which was produced at the Strand Theater on October 23, have just been issued by the Rena Co. in their November list of 10-inch records. They comprise the inevitable waltz, which seems to have become a standard feature of this class of musical comedy, and the peasant march from the play. It is interesting to note that "The Merry Peasant" has for his composer Leo Fall, who was responsible for the music of "The Dollar Princess," and further, its author is the writer of the book of "The Merry Widow."

FROM OUR LONDON HEADQUARTERS—(Continued.)

"Ebonoid" 10-inch disc, as was to be expected, is meeting with big sales, and indeed they deserve to. With this line traders have something which has never before been attempted on a disc record. It is double-sided and sells at 3s. retail. A generous percentage is allowed to dealers, and those in the colonies are losing money by not handling this line. Application should be made immediately, as agencies are now being fixed up. Address the company at The Point, Wandsworth, London, S. W.

Record by Dr. Cook.

Dr. Cook, of North Pole fame, has made a very interesting Gramophone record which will be on sale shortly.

Print Words of Songs.

In pursuance of their accustomed policy, the Rena Co. this month give the printed words of no less than four songs included in their November 10-inch supplement. Among these songs we note Wilkie Bard's "Top Note" and "Truly Rural."

North Pole March Appears.

We observe in the November list of 10-inch Rena records a selection entitled "The North Pole March." This is described as being of a particularly dashing character—which we can quite understand—and though it is hardly necessary, the manufacturers aver that the march has none of those characteristics of discord which mark the narrations of the alleged Pole discoverers, Cook and Peary.

Courant with Pathe Freres.

S. P. Turner, of Pathé Frères, this city, writes as follows:

"Dear Sir—We regret to note in your issue of October 15 that you have mentioned L. H. Courant is severing his connection with Pathé Frères. As Mr. Courant has only retired from the London business, and is still with the firm, will you please see that this is corrected prominently in your next issue. We enclose you herewith a small booklet of our "Majestic Grand Concert" Pathéphone. The demand for this machine and the new 20-inch records has been enormous, and we have large orders in hand which will be impossible to execute for some weeks to come."

Some Popular Edison Records.

Among the recent Amberol records issued by the National Phonograph Co. which have won a large measure of success are a special group for dancing purposes, made by the New York Military Band. These are very timely in view of the opening of the indoor or dancing season, and will be found most convenient for dealers desiring to feature such numbers. They are listed as follows: 260, "Ange D'Amour" (Waldteufel); 261, "Confidence" ("Blue Bell"), waltz (Waldteufel); 263, "Gypsy Baron" "Treasure" Waltz (Strauss); 264, "Good-night Waltz"; 268, "Petunia Quadrille," 1st and 2d figures; 269, ditto, 3d and 4th figures; 270, ditto, 5th figure and waltz; 271, "To the Front" (Karasek), two-step; 272, "Dixie Blossoms" (Wenrich); 273, "The Whitewash Man Medley," two-step; 274, "Dublin Daisies" (Wenrich), two-step; 275, "Lucky Moon" (Stevens), three-step; 276, "Animation Schottische" (Heed), and 277, "How'dy, Hiram" (Friedman), barn dance. Other late issues of the National Co. which are steadily gaining in popularity are the following: Ballet music from "Faust" (Gounod), 241, parts 1 and 2, by the Edison Concert Band; "Second Hungarian Rhapsody" (Liszt), part 2, by the Edison Concert Band, 206; selection, "Pagliacci" (Leoncavallo), 12085, by the National Military Band; "The Lost Chord" (Sullivan), 202, sung by Reed Miller (tenor), with orch. accom.; "Banjo Medley," 250, by V. L. Ossman, with orch. accom. (introduces "Wildflower," "The Whitewash Man" and "Yankiana Rag"; overture, "Merry Wives of Windsor" (Nicolai), 12076, by the National Military Band; "Bonnie Leezie Lindsay" (Lauder), 12080, sung by Harry Lauder, with orch. accom.; "The Midshipmite" (Adams), 12084, sung by Peter Dawson, with orch. accom.; "Hungarian Dance," G minor and A major (Brahms-Joachim), 203, violin solo, by Albert Spalding; "I Will Sing of My Redeemer" (McGranahan), 208, sung by the Edison Mixed Quartet, with organ accom.; selections from "Maritana" (Wallace), 220, by the Edison Concert Band; "Dream of the Tyrolienne" (Labitsky), 232, by the Edison Venetian Trio (originally issued as a "Standard" (No. 8349), and as a violin and flute duet, it is here presented as a trio for violin, flute and harp); "When the Sunset Turns the Ocean's Blue to Gold" (Petrie), 256, sung by Byron G. Harlan, with orch. accom.; "Staunch and True March" (Teike), 214; "Old Comrades March" (Teike), 226, by the United States Marine Band; "The Vacant Chair" (Root), 12081, sung by Ernest Pike and Peter Dawson, with orch. accom.; "The Two Grenadiers" (Schumann), 251, sung by Earl Cartwright, baritone, with orch. accom.

Standard—"Oriental Dance" (Herbert), 10217, by the Victor Herbert Orchestra; "Lola Waltz" (Friedman), 10228, by the United States Marine Band; "When the Moon with Glory Brightens," march (Arbuckle), 13887, by the National Military Band; "Santa Lucia," 10230, by the Whitney "Grand Republic," 10236, by the New York Military Band; "Santa Lucia," 10230, by the Whitney Bros. Quartet, unaccompanied; "Sweet Hour of Prayer" (Bradbury), by the Edison Mixed Quartet, unaccompanied, 10222; "Two Old Songs," 10232, bells solo, played by Albert Benzler, with orch. accom., "Suwanee River" and "Blue Bells of Scotland"; "My Dearie" (Farrells), 13895, sung by Peter Dawson, with orch. accom.; "Jackanapes Polka" (Lowthian), 13893, concertina solo, by Alex. Prince; "The Nightingale" (Seymour), 13891, duet, by Herbert Payne and Joe Belmont, with orch. accom.; "Gallopade" (Cammeyer), 13890, banjo solo, played by Olly Oakley, with orch. accom.; "Girls, Wives, and Kids," 13894, sung by Arthur Osmond, with orch. accom.; "Everybody Went Roundabout" (Pelham and Rule), 13888, sung by Florrie Forde.

NOTES ON GERMAN COPYRIGHT.

Developments in Copyright Law Still Interest Talking Machine Trade—Imperial Court of Law Invites Trade Representatives to Attend Conferences—To Pattern After American Law—Special Meeting of Talking Machine Trade Held and Resolution Adopted.

(Special to The Talking Machine World.)

Berlin, Germany, Nov. 3, 1909.

The development of the law dealing with copyright still occupies a prominent position in general interest. The situation at the time of writing is as follows: A year ago an international convention was held in Berlin which recognized in principle that music-rolls, discs and records should be liable to the payment of royalty. In view of the fact that these decisions are chiefly to be attributed to the recommendations put forward by the German Government, the latter is morally obliged to bring the German laws as quickly as possible in accord with the principles laid down at this convention. The Imperial Court of Law is therefore now engaged in working out a new German copyright law and has invited leading representatives of the automatic musical instrument industry to attend the deliberations. An agreement has been arrived at between the Government and the representatives of the trade that under no circumstances should a monopoly of any composition by a certain firm or firms be permissible. To bring about the desired results in this direction, the Government has recommended that the law should give the composer the right to decide in each case whether he will grant any firm permission to make use of his composition for the purpose of mechanical repetition, or whether he will forbid such reproduction altogether. However, should he once have accorded this permission to any firm, all other firms should have the right to also make use of the said composition "upon payment of a reasonable license." In actual practice this last clause will probably lead to impossible conditions, because such an elastic idea as "reasonable license" renders it possible for a composer to demand such a high fee that the first firm would really hold the monopoly; it would only be necessary for the composer to maintain that the records are so inferior in quality that he could regard only an exceptionally high amount as a reasonable recompense. The most convenient solution of this difficult question would doubtless be the fixing of a definite sum as license, as is done in America. However, in this country it is regarded by the majority as contrary to the constitution that a certain sum of money should be fixed by law for the transfer of such rights to a third party. At all events the measure proposed by the Government has met with the keenest opposition on the part of the trade.

The fear that the Government's proposition might be accepted was so great that a special meeting of the talking machine trade was held in Berlin and was very well attended. The protest of those present at this meeting was recorded in the following resolution:

"The Congress of the Talking Machine Trade, attended by manufacturers, wholesale and retail dealers, and others engaged in this branch, wishes to express to the Government its firm expectation that in the law now in preparation dealing with the extension of copyright to mechanical instruments and their accessories, the interests of the industry and trade will be sufficiently cared for. The congress declares that all decisions are ruinous and consequently untenable, which leave the trade and industry at the mercy of the owners of copyright and their legal successors, or which force the trade into innumerable legal actions, also such decisions which render any form of monopoly possible. For this reason the congress most urgently petitions the Government to bring about conditions by means of the new law, which are firm, clear, above the arbitrary actions of individuals, and conducive to the development of the industry and trade."

It was also decided to establish an office in Berlin, to which suggestions or wishes may be addressed and which will then bring such suggestions and wishes to the notice of the Government in suitable form.

In order to prevent the delivery of goods to unauthorized dealers, the congress passed the following resolution:

"The congress declares that an effective fight against the practice of cutting prices can only be maintained if the following conditions of sale are strictly adhered to by all manufacturers and wholesale dealers.

"1. Delivery is only to be made against signature of an undertaking to adhere to the selling prices.

"2. First orders are only to be executed at dealers' prices, providing sufficiently large orders are placed, unless the party placing such order is known to be a dealer, or can prove his bona fides as such.

"3. The so-called 'giving away business' and mail order business with spurious advertising must be combated in every way possible."

Finally this resolution was passed:

"The congress of the talking-machine trade most strongly condemns the illegal copying of discs and records, considering the same a severe violation of the good customs and comparable only to theft. It regrets that under the present legal conditions the parties guilty of such copying cannot be brought to book, and expresses its firm expectation that the Imperial Government, in accordance with the definite promises it has made, will without loss of time recommend to the bodies formulating the laws heavy penalties for offenses of this nature.

"The position is the same as in the case of illegal drawing of electric current, for which a penalty was fixed by special law, after it was realized that such action was tantamount to theft, but was beyond the reach of the laws already in force."

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Nov. 9, 1909.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

OCTOBER 14.

Berlin, 40 pkgs., $1,080; Buenos Ayres, 226 pkgs., $7,315; Callao, 9 pkgs. $1,000; Corinto, 6 pkgs., $398; Demerara, 9 pkgs., $376; Havana, 7 pkgs., $437; Havre, 114 pkgs., $1,191; Iquitos, 2 pkgs., $134; Leicester, 30 pkgs., $195; Limon, 8 pkgs., $503; Liverpool, 10 pkgs., $315; London, 6 pkgs., $319; 170 pkgs., $4,200; Melbourne, 466 pkgs., $7,659; Port au Prince, 7 pkgs., $166; Puerto, 2 pkgs., $166; Rio de Janeiro, 29 pkgs., $1,001; Savanilla, 13 pkgs., $445; Trinidad, 4 pkgs., $159; Vera Cruz, 61 pkgs., $1,053.

OCTOBER 21.

Berlize, 10 pkgs., $687; Berlin, 2 pkgs., $100; Colon, 7 pkgs. $251; Guayaquil, 5 pkgs., $200; Hamburg, 26 pkgs., $241; Havana, 31 pkgs., $420; 35 pkgs., $542; Klein, 16 pkgs., $2,500; London, 18 pkgs., $1,918; 248 pkgs., $5,639; Manila, 29 pkgs., $1,901; Santos, 9 pkgs., $552; Tampico, 3 pkgs., $1,785; Vera Cruz, 316 pkgs., $6,511; Yokohama, 14 pkgs., $928.

OCTOBER 28.

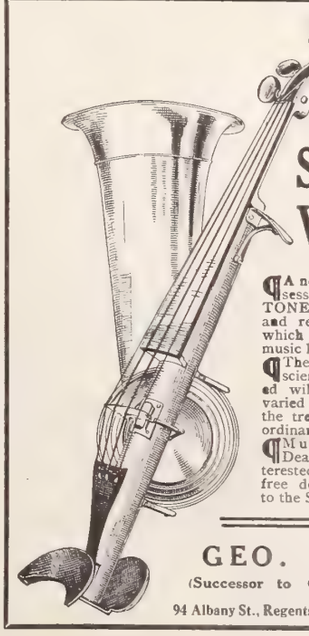
Belfast, 15 pkgs., $113; Berlin, 24 pkgs., $639; Brussels, 32 pkgs., $185; Colon, 12 pkgs., $146; Demerara, 6 pkgs., $324; Havana, 5 pkgs., $415; Havre, 6 pkgs., $270; La Guaira, 7 pkgs., $363; London, 235 pkgs., $5,955; 3 pkgs., $711; Milan, 2 pkgs., $200; Para, 8 pkgs., $545; Puerto Barrios, 9 pkgs., $487; Rio de Janeiro, 3 pkgs., $444; Savanilla, 9 pkgs., $396; Sydney, 20 pkgs., $173; Tampico, 4 pkgs., $174; 258 pkgs., $6,631; Valparaiso, 8 pkgs., $490; Vera Cruz, 284 pkgs., $3,-124.

NOVEMBER 3.

Algoa Bay, 45 pkgs., $2,251; Belfast, 1,070 pkgs., $13,106; Berlin, 42 pkgs., $701; Buenos Ayres, 59 pkgs., $2,493; 13 pkgs., $537; 198 pkgs., $10,745; Calcutta, 26 pkgs., $1,135; Callao, 1 pkg., $127; Cardiff, 25 pkgs., $162; Genoa, 5 pkgs., $500; Hamburg, 2 pkgs., $110; 8 pkgs., $220; Havana, 9 pkgs., $258; 16 pkgs., $385; Havre, 5 pkgs., $191; Jamaica, 2 pkgs., $147; Liverpool, 32 pkgs., $208; London, 701 pkgs., $8,147; 4 pkgs., $600; 2 pkgs., $122; Matanzas, 5 pkgs., $179; Rio de Janeiro, 5 pkgs., $228; Rotterdam, 4 pkgs., $1,600; Stockholm, 15 pkgs., $731; Tampico, 43 pkgs., $1,901; Valparaiso, 11 pkgs., $450; 16 pkgs., $969; Vera Cruz, 148 pkgs., $3,723; 157 pkgs., $4,-135.

NOVEMBER 10.

Belize, 6 pkgs., $86; Berlin, 23 pkgs., $515; Callao, 2 pkgs., $50; Havana, 46 pkgs., $1,765; 10 pkgs., $397; Hong Kong, 33 pkgs., $1,580; Liverpool, 53 pkgs., $490; London, 23 pkgs., $2,-800; 964 pkgs., $17,505; Manila, 28 pkgs., $2,597; Newcastle, 24 pkgs., $156; Para, 7 pkgs., $455; Pernambuco, 7 pkgs., $646; Rio de Janeiro, 50 pkgs., $2,246; Singapore, 7 pkgs., $183; Southampton, 1 pkg., $2,555; Sydney, 451 pkgs., $12,-316; Tampico, 3 pkgs., $1,017; Vera Cruz, 321 pkgs., $11,472.



The
STROH
VIOLIN

¶A new instrument possessing a VIOLIN TONE of great beauty and remarkable power, which will appeal to all music lovers.

¶The Stroh Violin being scientifically constructed will withstand the varied temperatures of the tropics, where the ordinary violin is useless.

¶Musical Instrument Dealers and others interested should write for free descriptive booklet to the Sole Maker.

THE SOUTHERN CALIFORNIA TRADE.

Active Preparations for Holiday Business—B. Kennedy Buys Out Fiske & Co.—J. B. Brown Music Co. Now in Handsome New Quarters—Sherman, Clay & Co. Receiving Big Shipments—Dr. Cook Records Sell Well—Southern California Music Co. Remodel Department—Some Recent Visitors—Holmes Music Co. Improvements—Chinese Dealer in Larger Store—Good Report from Santa Barbara.

(Special to The Talking Machine World.)

Los Angeles, Cal., Nov. 1, 1909.

Trade circles in southern California have seen a number of changes in the past thirty days. Many preparations for the holidays are noticeable, and prospects for a big business increase daily. In Los Angeles a notable change has just been announced by Fiske & Co., who have sold their entire business to B. Kennedy, who will continue to operate the store, with no apparent change, at least for the present. The name of Fiske & Co. has been closely connected with the Edison business for a number of years, that firm having been the city's pioneer house. Wm. Fiske is one of the best-known Edison men on the coast, and it is regretted much that he is leaving the trade.

The J. B. Brown Music Co. have moved two doors north of their old location on Broadway, and by this time are entertaining their old customers in their handsome new salesrooms. Much more space has been added to the talking machine department, and a large show window is to be devoted entirely to this section of their establishment. They have made their first appearance with a splendid Victor window which has attracted much attention.

Sherman Clay & Co. are receiving their holiday shipments in carloads. Their warerooms are filled with more Victor goods than they have had heretofore at any time. Manager Charles Ruggles has returned from a trip to San Francisco, where he attended the Portola festivities which took place in that city last month. The new Victor and Victrola cabinets have been received in samples and the regular shipments of the same are expected daily.

The Dr. Cook record has been a chief topic among Victor dealers, and a big demand for the same has been witnessed as a result of some clever advertising on the part of the dealers. Several of the leading dealers are using Victor ready-made displays in their show windows, and are to be complimented on the artistic effects they have derived from them.

The Southern California Music Co. have been the scene of much activity, having remodeled the wholesale Edison department so as to afford better facilities in handling their trade. The entire basement of their building is now devoted to Edison goods and large shipments for the same are arriving.

The announcement of the new "Amberols" is of great interest, and the trade is anxiously waiting its arrival.

John H. Gill, representative of the National Phonograph Co., has visited this section as well as Arizona and New Mexico. He has good reports from all parts and is much pleased with future prospects. Many good results have come from a trip among dealers by W. J. Reynard, who has been with the company for several years. Since his return Mr. Reynard has undergone an operation which has kept him out of the trade for a short time. The Edison business phonograph has made a strong gain in the commercial department. Edwin B. Bostwick has visited this section and finds Los Angeles has a high station in sales records for the past month. A window display, consisting of an operating office using the business phonograph, was a great attraction in one of the Broadway windows last month and resulted in several goodly sales of commercial outfits.

The Fitzgerald Music Co. have had the local management for Sousa and his band and have taken advantage of the many opportunities presented to advertise the Victor in connection with the band. Much attention has been drawn to their talking machine department by this means and also an exclusive Sousa show window.

The Geo. J. Birkel Music Co. have made a special of the Dr. Cook records, having featured the same in their newspaper advertisements. The Victor record by Frederick Gunster has also been an important item with them lately, owing to the fact that Mr. Gunster is a Los Angelean and a former customer of the Birkel Co.'s Victor department.

The Holmes Music Co. have added several features to their department, such as a ventilation system and a cash-carrier system. They have also advertised the Victor records of Ellen Beach Yaw with good results.

Geo. W. Lyle, of the Columbia Phonograph Co., has been a visitor in this city, together with W. L. Gray, coast manager for the same concern. Their views of trade possibilities are pleasant and the business of the company's local branch, under the management of Wm. F. Stidham, is in fair shape.

Max Landay, general manager of the Talking Machine Supply Co., New York, visited this city as well as others along the route of his trip. He has been meeting some very prosperous dealers along his route, particularly on the Pacific coast, where he has done a splendid business.

Sing Chung, the talking machine dealer of the local Chinatown, has just placed a large order for Columbia double discs, of which he carries a complete catalog. He has lately moved to his present store at 344 Apablaya street, where he has devoted double space to his talking machine business. Chung's store is a very interesting point to visitors in Chinatown, most of whom are not aware of the fact that the Chinese are talker enthusiasts. On the street approaching his store one is first greeted by the sound of an Oriental air played with all the reality imaginable, which, until you learn it is coming through a horn, is taken for the real thing. His store is systematically arranged and conducted on up-to-date plans.

From San Diego comes news of good trade for the past month and better prospects for the fall than ever before. The Wiley B. Allen Co. are in receipt of a large shipment of Victor goods, including several Victrolas.

The Southern California Music Co. have enlarged their talking machine department to double its former size, giving it in all eight large salesrooms and 75 feet of record racks. Edward Borgum, who was in charge of the department and who superintended operations during alterations, has resigned his position to take the management of Eiler's talking machine department. On his way north he will stop at Los Angeles and San Francisco to see his trade mates in those cities.

Santa Barbara is livening up some in the last days of the month of October. The Brown Music Co. have made a handsome Victor display with a Victor ready-made outfit which was received some time ago. Burson & Buelna have been unfortunate lately, having had an accident at their factory which damaged several costly discs. New ones are being made, and they expect to send shipments of their new brake to the trade before long.

Julian Johnson, music and drama critic of the Los Angeles Times, has gained much admiration among the dealers of southern California as a result of his criticisms given through the columns of his paper in regard to new issues of talking machine records. Talking machine owners watch them with as great interest as though they were of some performer before the local audiences.

Another noticeable good bit of advertising in favor of the talking machine is that which results in the use of a Victor Auxetophone by the Balfour-La Bonte-MacDonald Trio in a series of recitals given in important cities of the southwestern States from Texas to California. The successful use of the Auxetophone by these musicians has served as an excellent demonstration of the higher class musical entertainment possible through the Victor.

The Southern California Music Co. are using a large new auto truck for delivery of goods from the wholesale department.

DEATH OF D. C. McEWEN.

One of the Earliest Men to Become Connected with the Development of the Talking Machine in This Country.

Daniel Church McEwen, whose death occurred at his home in Brooklyn, N. Y., on November 1 of pneumonia, at the ripe age of 66 years, was one of the earliest men to become interested in the development of the talking machine in this country, in connection with the graphophone of the Columbia Phonograph Co. He was a lifetime friend of the late Andrew Devine, senior vice-president of the American Graphophone Co. at the time of his death on May 4 of this year.

Mr. Devine, it will be recalled, acquired the Bell and Tainter patent, the basic invention of the present talking machine, and shortly afterward Mr. McEwan became interested, in association with Frederick J. Warburton, E. V. Murphy, dean of the United States Senate stenographic corps; Edward D. Easton, president of the Columbia Phonograph Co., General; Roland F. Cromelin, deceased, brother of Paul H. Cromelin, vice-president of the Columbia Co., and others. Mr. McEwen was a director of the American Graphophone Co. for many years, taking an active interest in its affairs until his retirement about two years ago. He was one of the heaviest stockholders in the company at the time of his death.

At one time he was private secretary to the Hon. William H. Seward, when Secretary of State during the administration of President Lincoln, being an expert stenographer. Afterward Mr. McEwen was in the editorial department of the New York Tribune two years, while

John Russell Young was the managing editor. His intention had been to become a lawyer and he studied law at the Columbia law school and was later admitted to the bar. But in 1869 he was appointed official stenographer of the New York Supreme Court, second judicial district, and in the interests of efficiency to the courts and the economy of the State, he had full charge of the Supreme Court official reporting in nine counties, employing his own assistants. This position he held for thirty-five years, when he retired from active business, and has since devoted himself to family and social life. He was a member of the Montauk and Crescent Athletic Clubs, the Thousand Island Yacht Club and the Thousand Island Golf Club.

GOOD BUSINESS IN BALTIMORE.

October Proves Banner Month and November Opens Up with a Rush—New Columbia Co. Manager Active—Sanders & Stayman's Good Report—Other Dealers Pleased with Situation Thus Far This Fall.

(Special to The Talking Machine World.)

Baltimore, Md., Nov. 9, 1909.

October was the banner month for the talking machine dealers in this city and November has started in with a rush. In fact, during the past week, according to statements made by dealers, there has been more business done wholesale and retail than has been experienced here at any one period for many months past. This is not regarded by the dealers as the advance of the Christmas trade, for they express the opinion that December will break all records. Among those who are having a great sale of the various lines of talking machine goods are the department stores of the city who have set aside separate departments for this line of business.

One of the busiest men of the past week has been Morris Silverstein, the new and genial manager of the local office of the Columbia Phonograph Co. He is thoroughly convinced by his short experience here that Baltimore is an excellent field for his line of business for he has been kept on the go ever since he arrived Monday a week ago. Mr. Silverstein was transferred from the Louisville office of the firm, where he had been in the capacity of manager for several years, to succeed M. E. Lyle, who has been transferred to the executive office of the company in New York. Among the things that Mr. Silverstein brought with him from Louisville is a newspaper clipping from one of the dailies of that town which contained a glowing account of the farewell dinner given to him at the Hotel Seelbach by his many friends of that city.

Manager Silverstein has made a number of changes about the local establishment which causes one to imagine that he is entering an entirely new store. It is being freshly papered and the windows have been arranged entirely different than before so that the displays are shown to a better advantage. The local store has had a great demand for literature and many inquiries about the new De Luxe and Regent Grafonolas, which indicate, according to Mr. Silverstein that these latest productions of the Columbia Co. are going to prove good sellers and have a good run in this city.

Manager Albert Bowden, of the talking machine department of Sanders & Stayman, reports that business for October has been far above the average and that there is every indication of a record-breaking Christmas trade. The high-priced Victors and Columbias, both of which are handled by Sanders & Stayman, have been in the greatest demand and several good sales have been made. The request for the "Red Seal" records have also been heavy.

E. F. Droop & Sons Co., headquarters for Victor and Edison machines, have also had a good business with these two lines, while the records have been in the usual healthy demand. Similar encouraging reports concerning the Victors are made by Cohan & Hughes, H. R. Eisenbrandt Sons and Isaac Benesch & Sons.

MAKING A GOOD RECORD.

Manager Semels, of the Talking Machine Department of Ludwig Baumann & Co., Building Up an Excellent Business with Victors and Edisons.

S. Semels, well known for the past ten years in the talking machine and musical instrument trade, has been appointed manager of the talking machine department of Ludwig Baumann & Co., 8th avenue and 35th street, New York, where a full line of Victor talking machines and Edison

S. SEMELS.

phonographs, records and supplies as well as musical instruments, are carried. Mr. Semels reports that he has more than trebled the business of 1908; in fact the volume of trade transacted is far ahead of any period on record in this department. He predicts that the business for the holidays will be of large proportions and excel that transacted in any previous year. Mr. Semels is a gentleman who believes that the best results are secured by hard work.

DINNEEN TO OPEN STORE.

William Dinneen will shortly open a new store in Geneva, Neb., for the sale of pianos, organs, small goods, sheet music, sewing machines, etc., under the title of the Dinneen Music Co. W. P. McCall will handle a complete line of talking machines in the same store.

The Oesstereich department store, Milwaukee, Wis., have installed a talking machine department, handling the Columbia Co. line.

JOS. ZIMMERMANN

Needle and Pin Works

AACHEN, GERMANY

THE MULTINOLA IN NEW YORK.

An Automatic Continuous Multiple Phonograph the Invention of Dr. Geo. S. Iddings, of Cleveland, Wins a High Degree of Favor in the Metropolis—A Marvel of Construction and Effectiveness—Tone Results Most Satisfactory—A Remarkable Instrument.

An "automatic continuous multiple phonograph," of which two views are herewith presented, has been exhibited for the past few weeks at the Hoffman House, New York, by Dr. George S. Iddings, the inventor, of Cleveland, O. It has been shown a large number of people—musicians, record experts, newspaper men and the general public—and the demonstrations conducted by the doctor have resulted in the highest praise for its marvelous reproduction of sound, particularly its fine quality—mellowness and softness of tone, yet loud and brilliant, and with the entire elimination of "blast" and mechanical harshness.

In point of construction it is a beautiful piece of work, being encased in a cabinet 4½ feet high by 2 feet broad. The cuts depict the machine with the glass doors, giving one a clear idea of the record carrier, operated by an endless chain, and the details of the controlling mechanism on top. The other illustration presents a closed and covered cabinet with Dr. Iddings alongside his invention. The utility of slot machines has heretofore been confined to public places, amusement halls, etc., but the entertainment furnished compares poorly with the ordinary talking machine. On the other hand, the Iddings "automatic continuous multiple phonograph" has splendid reproductive powers, and therefore is adapted for the home as well as for the purposes mentioned.

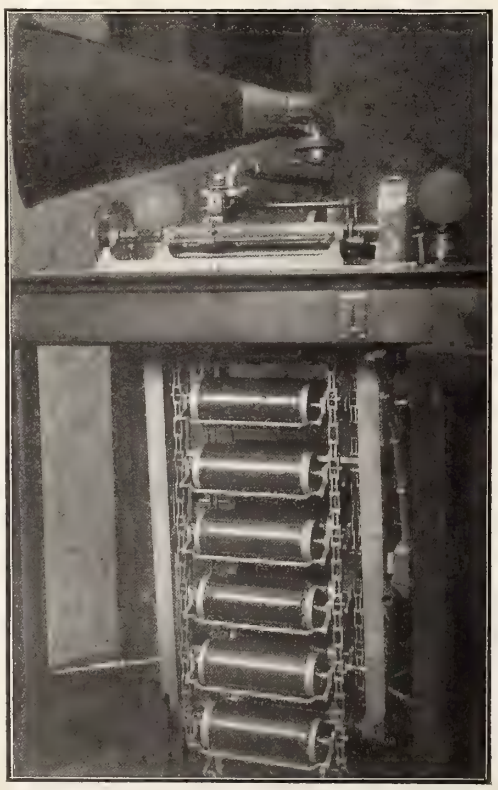
Aside from the number of mechanical improvements introduced in the construction of his machine by the doctor, the essential or capital improvement is in the "speaker." The mechanism of the reproducer differs to a certain extent from those familiar to the trade in the "limiting" and the "float," which are covered by special patents already allowed, it is said, in the face of a severe interference fight in the Patent Office. A "shutter" on the reproducer cap eliminates the "blast" and softens the tone, and which may be regulated at will. The diaphragm of the sound box is of corrguated metal, and a ball or button sapphire point, as may be desired, is used. As experts know, a volume could be written as to which gave the best satisfaction, the ball or button point, and the choice is therefore left to the choice or preference of the individual, for there is room for a vast yet honest difference of opinion regarding the two. The amplifying horn is attached to a straightaway tone arm, with only a couple of turned elbows, that materially aid in the clear conveyance of the sound, and which is also claimed to be modified and improved.

The mechanical parts of the machine differ materially from those employed on the ordinary slot machine. A drop mandrel, on two endless revolving chains, is controlled by a series of cams and springs. Two governors on the machine bed plate drop the mandrel and wind the springs, which are placed in the rear of the record carrier. The record carrier, as may be noticed in the cut, working on twin endless chains, conveys the record, presenting each in turn as its predecessors finish playing. By means of a dial, on top, and seen to the right in front of the small electric bulb, regulated by a small crank on the side, any particular record may be selected by number and played; or it may be repeated indefinitely by touching a button. When running regularly, as each record is completed it drops from under the reproducer, descending and taking its place in the carrier, another coming up and presenting itself automatically, with only an interval of about 20 seconds. The records are easily removed or inserted without stopping the machine or interfering the slightest with its operation in any way. The present machine is built to accommodate sixteen records, but by lengthening the carrier a much larger number can be provided for.

SHOWING MULTINOLA CABINET READY FOR OPERATION. THE INVENTOR, DR. IDDINGS, IS SHOWN SIDE OF CABINET.

An electric current from an ordinary light will operate the Iddings "automatic continuous multiple record phonograph," or by means of springs, the mechanism being started by the regular slot appliance and a coin. Doctor Iddings is emphatic that he can read his patent title clear, as he says forty-one claims on his invention have been allowed by the Patent Office.

Of course, the ridiculous statement of the daily newspaper writers that this machine "will revolutionize the talking machine business" is sheer nonsense. That is the way they describe everything the least out of the common run of things. It is certain, however, an improvement is presented for the consideration of those whom it may concern that is worth attention, inspection and consideration. A private demonstration for the benefit and enlightenment of representatives of the New York daily newspapers and talking machine men is scheduled to be given by Dr. Iddings at the Hoffman House November 16. with the usual social courtesies and accompaniments.



PHOTOGRAPH OF MULTINOLA SHOWING ARRANGEMENT OF RECORDS.

VICTOR CO.'S GREAT TRADE.

October Business Showed an Increase of 100 Per Cent. as Compared with the Same Month Last Year, While November Is Making a Still Better Record—Difficulty in Filling Orders Owing to Delay in Completing New Cabinet Factory.

Business with the Victor Talking Machine Co., Camden, N. J., has now not only reached the very best records of past years, but is rapidly far exceeding them. It is clear now that Louis F. Geissler, general manager of the Victor Talking Machine Co., must take rank as a true prophet for the predictions he made in 1907, when the hard times struck us—that we had entered into a panic of about two years' duration; that the summer of the second year therein would show a healthy return to prosperity to the extent probably of 33⅓ or 50 per cent.; that the second fall would show us back to a prosperous condition again—have been more than fulfilled.

September of this year was the largest September in point of sales in the Western Hemisphere that this company has ever had, and we understand that had not Europe been slightly behind it would have been the largest September in the business history of this company the world over.

October business with the Victor Co. is 100 per cent. ahead of the same month of last year, and while not up to date the best October with this company it is certainly a record to be proud of.

On inquiry we find that so far in November the Victor orders are coming in with such rapidity and in such volume that they are actually far beyond the capacity of the plant. In this connection General Manager Geissler said to The World:

"There will be a dearth of Victor goods during December, January and February. Unfortunately for us, our new cabinet factory is almost three months behind in delivery of the date that it was promised to us. The contractors are paying us $100 per day for this deficiency. Had this cabinet factory been completed on June 29, as promised us, it would have, in all probability, meant the sale and delivery of several million dollars' worth more Victors.

ADVERTISING THAT CATCHES THE EYE.

It is generally believed that good advertising should be attractive, at least to the extent of drawing the reader's attention to same. On page 37 of this issue an advertisement of the Blackman Talking Machine Co., headed "How do you order dinner?" is perhaps a good illustration.

To some in the trade who are inclined to look on the humorous side of life they would immediately reply that this question could best be answered after knowing who is to pay for the dinner. It would probably be better, however, to read more than the headline of the above advertisement.

WHY THE CONDOR NEEDLES SELL.

Jos. Zimmermann, of Aachen, Germany, has long made a specialty of all kinds of needles, particularly those for talking machines, and the Condor needles which he manufactures have won a splendid reputation in talking machine circles throughout the world for their fine quality. It is maintained by Mr. Zimmermann that a needle must not only be satisfactory exteriorly, but it must be of uniform quality throughout, otherwise when the friction causes the polishing to be taken off its interior grain digs into the record and breaks the fine walls, thus damaging the disc irreparably. Dealers in the United States should make it a point to investigate the Condor needles as well as the special claims made for them.

All the property of the United Phonograph Co., Wilmington, Del., has been disposed of at private sale by the assignee.

NEW RECORDS BY CARUSO.

The Great Operatic Tenor Makes a Further Contribution to the Valuable List Now Put Out by the Victor Talking Machine Co.—Other Valuable Records Recently Made by Leading Operatic Artists.

Sig. Enrico Caruso, the great operatic tenor, has been a visitor at the Victor laboratory in Camden, N. J., during the past week, and, as a result, has made for the Victor Co. some of the most magnificent records that they have ever had of his voice. To have secured him before the advent of the operatic season, when his voice is fresh and rested, insures the Victor hearers the very best that there is in him. The selections that he has made for the Victor Co. this year are very desirable and are bound to have an enormous sale.

Sig. Caruso expressed himself as keenly delighted with the results obtained from the Victor Co.'s laboratory workers in the recording of his voice, and complimented all those present on the tremendous advance made in the quality of the records generally and the perfection of results attained all round.

The Victor Co. have recently had a number of important records made by Miss Farrar, Mme. Homer, Sig. Scotti, Mme. Schumann-Heink and Mme. Sembrich, which will be listed at an early date. They will be eagerly awaited by the trade and will mark a new era of activity in the sales for the distributer and dealer.

The piano, organ, phonograph and musical merchandise store of the O. F. Kauffman estate, 48 North Eighth street, Reading, Pa., has been taken over by E. A. Gicker and Elmer L. Henne, enterprising young men who were in the employ of the former owners for years. Besides an extensive line of pianos and small goods, a complete stock of Edison phonographs and records are carried.

IMPORTANT AUSTRIAN DECISION.

The Supreme Court of Austria Again Passes on Copyright Question and Decides in Favor of Disc Manufacturers.

The Supreme Court of Austria has given the following decision regarding "Gramophones and the Copyright Law," which settles the repeated suits regarding the infringement upon copyright by gramophones. A talking machine manufacturer was sued because he manufactured discs with parts of music and songs from light operas, for which the complainant had acquired the copyright from the composer and author of the libretto, as well as the exclusive right of reproduction and commercial distribution. While the Court of First Instance found for the complainant, the Court of Appeals and the Supreme Court dismissed the complaint. Among the grounds given was: That the freedom to reproduce copyrighted music mechanically enacted in the copyright law applies to gramophones, which is declared to be a mechanical reproduction of the music recorded. The disc of the gramophone is not the actual instrument of reproduction, as it is not readable, and technically has no separate existence; but with the gramophone it forms a unity. The latter is, without doubt, an instrument for mechanical reproduction of musical works, and this reproduction creates a desire to attend a real performance; it makes the composition popular, therefore is useful to the composer and to the author of the words, and as far as the latter is concerned, the gramophone does not make books containing the libretto any more unnecessary than the real performance.

When Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, was seen by The World regarding the foregoing decision he said:

"This last decision of the Austrian Supreme Court involving the copyright question in its relation to mechanical reproduction settles the question definitely in Austria unless a new law is passed. You will recall that Austria is not a member of the Berne Union. Under the present Austrian law freedom to reproduce copyrighted music on mechanical devices is expressly permitted. Notwithstanding this, numerous suits have arisen involving the alleged rights and composers, and heretofore the final decisions have always been in favor of the makers of mechanical devices. In this last suit the Supreme Court was called on to consider whether the talking machine was a mechanical device within the meaning of the law and whether the use of the words constituted infringement. The decision is a sweeping victory for the manufacturers."

LEEDS & CATLIN CO. AFFAIRS.

Wm. Allen, referee in bankruptcy, before whom the bankruptcy proceedings of the Leeds & Catlin Co., New York, are now pending, stated to The World recently that the affairs of the defunct firm were in a very unsatisfactory condition, and the present outlook was that the creditors would realize very little. The transference of the company's property from Middletown, Conn., to the jurisdiction of the District Court of the United States, New York, was still pending, but that ultimately it would be accomplished.

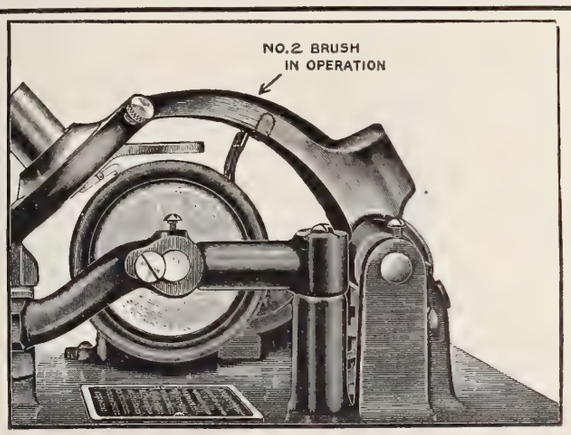
A prominent and popular artist, whose name is known throughout the country as a maker of fast selling records, in chatting with The World recently said: "There are some new things in the way of sound reproduction that will soon be coming along which will revolutionize present methods. I have assisted in making some records that will be a revelation when placed on sale in commercial quantities. As yet the work is confined to the laboratory, but the time is short when the trade will have the finished goods to judge for themselves."

SAVE THE LIFE OF YOUR RECORDS

BY USING **THE PLACE AUTOMATIC RECORD BRUSH**

FOR EDISON PHONOGRAPHS AND VICTOR TALKING MACHINES.

PATENTED { September 25 and October 2, 1906 and September 10, 1907.



PRICE, 15 CENTS

CAN BE USED ON ALL PHONOGRAPHS

Removes lint and dust from record automatically. Saves Sapphire from wearing flat and prevents rasping sound. Insures a perfect playing record. It is equally as efficient when recording. It is too cheap to be without.

MANUFACTURED BY **BLACKMAN TALKING MACHINE CO.**

97 CHAMBERS STREET, NEW YORK

J. NEWCOMB BLACKMAN
President
"The White Blackman"

CONDITIONS AS VIEWED BY A JOBBER.

J. N. Blackman Relates, in Interesting Manner, His Experiences While Calling on Dealers in Territory Adjacent to New York—Why Some Dealers Suffer from "Poor Business"—Lack of Ginger the Chief Cause Together with Carelessness in Keeping Stock—Remarks Worth Digesting.

At the request of a World representative, J. Newcomb Blackman, president of the Blackman Talking Machine Co., New York, and vice-president of the National Association of Talking Machine Jobbers, explained conditions as he found them recently, when calling on a number of talking machine dealers, as follows:

"In preparing for the fall and winter campaign I decided it would be well for me to personally call on a number of dealers in different territories to determine, if possible, existing conditions and how they might be improved among our dealers. Generally speaking, I found that dealers conceded a steady though slow improvement in business, but they lacked enthusiasm, as is usually the case during dull times.

"It is remarkable how we can make use of the spare time we appear to have during dull times if we would only look into every feature of our business, and by placing ourselves in the position of a customer, endeavor to find out where improvements could be introduced.

"Poor business is usually excused by bad business conditions, but it is surprising to what extent we can either contribute toward these conditions or remove them by improved methods and better representation.

"I called on a dealer in a good-sized town where he practically had the field to himself at the present time on both the Edison and Victor line, for his only competitor carried very little stock and only handled one of the above lines. That this dealer had been successful in the past cannot be denied, but he was carried along by the momentum of prosperity, whereas recent business conditions had caused him to neglect his talking machine business, which was simply one of his departments. He had a good stock of records and a fair stock of machines, but through lack of a proper system of racking his records, I found them lying around on counters, on the floor in boxes, and a general state showing a lack of order. He explained this condition by stating he had no more room to give to the talking machine business and did not feel encouraged to keep putting in more stock without proper racking facilities.

"The talking machine department was located in a portion of the store where furniture, carpets and general household goods were carried, and I asked the dealer to place himself in the position of a prospective phonograph customer or record buyer. I asked him whether the customer for the house furnishing goods would not be in the way and interfere with one for phonograph goods; in fact, questioned him as to whether the customer would not be impressed unfavorably with his lack of facilities for accommodating talking machine customers.

"We had one of those 'heart to heart' talks, wherein I convinced the dealer that he should provide better accommodations for talking machine customers, if he hoped to increase his business and hold what trade he had. The result was that between us we figured where we could actually accomplish the desired results with less space than he was using at the present time, by consolidating his records and yet retaining the good features of the tray and label system which he used. We figured out a corner of the store where he agreed to build a display booth, into which customers could be ushered and feel at home. This dealer, I feel, now realizes that there is ample opportunity in his town for a much larger business, and that his prosperity will be regulated very largely by his own methods.

"Another dealer met me with the usual complaint that business had been very poor, and whereas the customers used to come in often and buy records, they now seldom appeared. This seemed strange to me at first, as I quickly observed his stock of Edison records totaled not less than 1,000 and his Victor stock in number was quite imposing. As he did not seem to volunteer any reason for the change of patronage I began to investigate and found while this man had no opposition in town and had considerable invested in Edison goods, he had not yet put a combination attachment in stock, an Amberol record, or even any of the new monthly records for several months.

"Is it any wonder that his customers were going elsewhere when he did not apparently show his confidence in new goods by having them to display to prospective buyers? In the past he used to mail a list of monthly supplements to a list of customers each month, but he had discontinued that some time ago, relying on the fact that customers should know new records were issued each month, and if they wanted any should come in. He did not seem to realize the importance of letting the customer know what the new records were, and more important, that by failing to bring customers into the store for new records he was very largely removing his chances of selling regular stock records.

"I must give this dealer credit, however, for agreeing that he really could not expect much patronage under the conditions as they existed with him, so he finally stated that perhaps he would sell out. I promptly stated this was the proper thing to do, unless he proposed to advertise among his townspeople the fact that he was in the business and would keep them posted, and be prepared to display up-to-date goods.

"The peculiar part of his selling out is that in this case, like in others, my offer to try and find a customer, if he would not be a little more up-to-date, made him question whether he did want to sell out after all, and he finally decided that the business was really better than might be expected, and that the real trouble was his lack of facilities, which we then arranged to improve.

"I approached another dealer who did not know me personally and appeared in his store as a prospective customer. My request for a catalog, after some delay, brought the response that he did not seem to have any on hand. An inquiry for the latest record list was the same. He finally produced a supplement list of Victor records three or four months old, and I asked to hear a certain record. I watched his face to see if he received this request kindly, and noticed he gave evidence of nervousness. Mr. Dealer, however, reached over to a shelf, after my telling him this particular record was a band piece, and proceeded to shuffle the records somewhat in the manner that cards are dealt. After consuming about ten minutes of time he was not sure, but he did not appear to have that record in stock; however, if I wanted to order one he could get it for me in a day or two.

"To avoid a repetition I asked for a record which I had noticed was in the pile, which, however, he was not aware of until he had repeated the shuffling act. Mr. Dealer then produced a dust rag and proceeded to make the record look like new. Having noticed this, I told him I was in the habit of buying new records, whereas his seemed to be second-hand and looked shop-worn.

"The record was not played for me, as I then told him my time was limited and that I would have to come in again. He did not urge me to stay and hear some records he had in stock and thought I might like, but his manner was entirely indifferent and impressed me that it really made little difference whether I bought anything or not.

"How many cases of this kind could we find among both Edison and Victor dealers, and how easy it is to reason how such a dealer will never make a success of the business.

"In this same town there was a dealer who carried a good stock of Victor goods and could immediately respond to any inquiry. His stock

VICTOR, EDISON AND REGINA JOBBERS

Cincinnati **Chicago**

☞ *Two points of supply; order from the nearer.*

was kept in envelopes, and if they had been in stock for some time you could not determine it, as in the former case, by the appearance. He carried his records by number, and if he did not have one in stock that I ordered he was ready to offer some similar selection, which at his invitation I would probably hear and perhaps buy. This up-to-date dealer sends the record supplements each month, whereas the other dealer did not. He kept in stock a good supply of the latest catalogs, and when he was favored by having a prospective customer enter his store he showed him he wanted his business by giving him every attention.

"Now, both these dealers sold Victor records; the first man's stock was dusty and he did not seem to care whether you wanted to buy. The other man was up-to-date; he wanted your business; showed it by his manner, and, by the way, also had a neat booth in which to play the records.

"The records in both stores are sold at the same price, but in one store you get what you want. Can it be that anybody would question why the up-to-date dealer in this town was doing the business and the other man was always finding fault.

"Edison phonographs and Victor talking machines, records and supplies are sold at the same price by the small dealer as well as by the large one, by the dealer who encourages patronage as well as the one who does not. Competition is purely a matter of service and in letting people know where you are and what you have to offer them. How important it is, therefore, for every dealer to use the most up-to-date methods, to encourage patronage, for he must admit that at the same price he would patronize the dealer who offered the best accommodations.

"The factories depend on their jobbers and dealers to handle the business. Jobbers are supposed to carry a satisfactory stock to enable them to make prompt shipments, as well as be equipped in all departments to help the dealer thoroughly understand all branches of the business. The dealer is expected to be properly equipped by stock and methods to make a sale to the prospective customer.

"Territories are being reasonably restricted, in accordance with the representation put forth, by Edison and Victor dealers, and the fact that some dealers may be giving up the line should be welcomed by those in their territory, who realize the possibilities.

"I know of many cases where towns are represented by one live, up-to-date dealer, who has a complete stock and satisfactory accommodations, and the results are better for all concerned. Anybody in such a town has no difficulty in obtaining the latest records, whereas under former conditions there may have been three or four dealers, none of them having a satisfactory stock or proper facilities to encourage continued patronage.

"Some of the dealers who complain about their neighbors going to a larger city to buy would do well to investibate their facilities, as compared with the man who is drawing the business away from them, and place themselves in the position of the prospective buyer and see whether they, under the same conditions, would not do likewise.

"My experience, as above, has been given, not for the purpose of criticizing, but simply to point out to many dealers who may not be doing a satisfactory business on Edison or Victor goods some of the conditions that exist with others and perhaps with them.

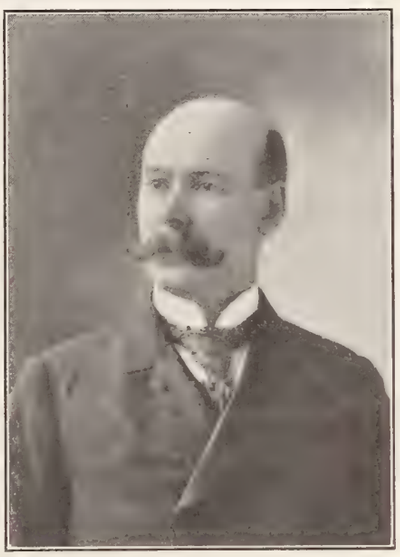
"We are always ready and willing as jobbers to explain to our dealers methods we know have proved successful. Any jobber can sell talking machines and records as cheap as his competitor, and all dealers can sell at the same price at retail, but this is not all—it is a matter of service and treatment thath builds a business or tears it down in this line.

"Think this over very seriously, Mr. Dealer, place yourself in the position of your customer, and it will not be hard for you to find out where your competitor is gaining on you. We can all improve and should learn something every day. When we have become perfect our usefulness on earth is ended, and it is time for us to depart."

J. P. BRADT NOW CANADIAN MANAGER

For Columbia Phonograph Co.—In Charge of Canadian Business with Offices in Toronto.

James P. Bradt, for many years connected with the Columbia Phonograph Co., General, is the new general manager of the company's entire Canadian business, with offices in Toronto. He succeeds A. F. Tero and assumed the position November 8. Wednesday of last week Marion Dorian, auditor of the company, went to Toronto with Mr. Bradt to make the change, and he is expected back in New York Monday. Mr. Bradt is not only highly popular with everyone in the



JAMES P. BRADT.

Columbia service, but is regarded as one of the ablest members of the managerial staff of the branch houses.

About six years ago Mr. Bradt was in charge of the Columbia office in Baltimore, Md. Then he was sent to Berlin, Germany, succeeding Paul H. Cromelin, now vice-president of the company, as manager, later occupying the same office in London, Eng., to which John A. B. Cromelin was the successor in the spring, and who is now the general manager of the entire European business. About a month ago Mr. Bradt returned from Europe. From his varied experience, sturdy strength of character and general all-round fitness, especially that acquired as head of the London office, great things are expected of Mr. Bradt in Canada, and there is not the slightest doubt but that he will make good and measure up to his previous high standard.

REVISION OF RECORD PRICES.

National Phonograph Co. Increase Wholesale Record Prices Owing to Heavier Expenses and Copyright Royalties—Allowance for Breakage Partly Equalizes Prices.

The sales department of the National Phonograph Co., Orange, N. J., under date of November 1, announces a revision in the price of Edison records and a proposition making a special allowance to cover any possible breakage of records in transit. Both become effective on January 1, 1910. The circular in part is as follows:

"Due to causes hereinafter stated we find it necessary to slightly advance the prices of Edison records of all types to the dealer, but in no case is the advance sufficient to justify a change in retail prices, which remain as heretofore. The principal reason for the increase in price is the fact that the recent copyright law, which went into effect July 1, 1909, for the first time extends the protection of copyright to phonograph records, so that in the future we shall be required to pay large sums as royalties to authors and composers.

"We anticipate that these royalties will amount to about two cents on each copyright record, and although the proportion of copyright records used has been small so far, it undoubtedly will be necessary for us to use large numbers of copyrights in the future. Furthermore, we shall be required to pay these royalties even if many of the copyrighted records are later returned under our exchange proposition, so that from this source alone there will be a probable additional heavy loss." Another reason for the advance is the additional expense for "talent" as well as for special artists. A third reason for the increase is that of the higher cost of raw materials and factory operations. The prices, that go into effect January 1, are: Edison Standard records, 21 cents; Amberol, 30 cents; grand opera (two-minute), 47 cents. The list price remains unchanged.

"Notwithstanding this fact, however, we propose to make a radically new proposition and will assume a part of the increase by making a very liberal allowance for breakage in each case, whereby the net prices will be only very slightly higher than at present. By making this allowance the annoyance of adjusting claims for breakage between ourselves and dealers, and between jobbers and their dealers, will be entirely removed. The allowance for breakage we propose to make to dealers is 3⅛ per cent., this allowance to be also made by jobbers in transactions with their dealers."

J. C. Roush, of the Standard Talking Machine Co., Pittsburg, Pa., and secretary of the National Association of Talking Machine Jobbers, was in New York last week, having come East chiefly for the purpose of visiting the Edison and Victor factories and placing orders for early delivery. Mr. Roush took advantage of the opportunity to call on several prominent members of the association in New York and Philadelphia. He had an excellent report to make regarding business.

HORNS FOR SALE.

For Sale or Exchange—Allen Horns and Phono Arms. Will exchange for disc or cylinder records in any quantity at a low price. Address Allen, care Talking Machine World, 1 Madison Avenue, New York.

BUSINESS FOR SALE.

A good musical and jewelry store in a town of about 7,000; no competition; also have an optical department doing good business; just the repair bench pays for all the expenses; have a complete stock of Edison goods; also a good stock of Victors and other musical goods. The store was started with a capital of $100, and two years later it invoiced $10,000. As I have other stores, I find that it is too much work for me and would like to dispose of one of them. Have reduced it down to $8,000. Do not answer unless you mean business; no job lot. I am willing to give full particulars. Address Jeweler, 1728 I street, Granite City, Ill.

CAN YOU USE ME?

A live wire with over ten years experience as manager in the Talking Machine business. Well acquainted throughout Great Britain and would like to locate there. Can you use an experienced man of high class ability, one who is resourceful and can build business. Address "LIVE WIRE," care of Talking Machine World, 1 Madison Avenue, New York.

Salesman Wanted At Once!

An experienced floor salesman, one who is familiar with high-class trade; good position to the right man; salary no object; all correspondence confidential.

Apply by letter only.

LANDAY BROS.,
400 Fifth Avenue, New York.

New York, Nov. 11, 1909

TO THE TRADE

Gentlemen:—Our attention has just been called to a circular letter issued by the Victor Company under date of November 8th in which they refer to our line of Grafonolas.

Item No. 1—Legal Protection

The whole letter is so wide of the facts that it can hardly be considered seriously, except one addled paragraph concerning "infringement of patents." We wish to assure every dealer in and user of Columbia Grafonolas, as well as our esteemed competitors, that the Grafonola is absolutely clear of any infringement, and that we shall hold our dealers and customers harmless from legal trouble or expense. We stand squarely behind our product, as always, and as our competitors have peculiarly good reason to know.

Item No. 2—Quality

The climax of our broad advertising of the Grafonola is a frank request to the reader to make comparisons—to see the Victor hornless machine and hear it, and do likewise with the Grafonola. The Grafonola superiority is unmistakable—and that's why our Grafonola announcements hurt so much. Likewise with our entire product of machines and records: out at the Alaska-Yukon-Pacific Exposition the Jury of Awards has been making some disinterested comparisons, and COLUMBIA DISC RECORDS AND MACHINES RECEIVED HIGHEST GRAND AWARD OVER ALL. (Victor disc machines and records were awarded second-prize gold medal.)

Item No. 3—Litigation

One paragraph of the Victor Company's letter contains vague threats relative to future litigation. In view of its own statement of the results of past litigation, the whole thing reads like an unsolicited contribution to Puck, recalling the famous telegrams of the Russian Generals to the Czar during the recent quarrel with Japan, which usually proudly claimed "ANOTHER MASTERLY RETREAT."

Columbia Phonograph Company, Gen'l

Tribune Building, New York

N. B.—Do you know the history of the Talking Machine and the records of to-day? If you happen to be interested in getting the whole story and the exact truth of those basic patents, we shall be very glad to send you a pamphlet which is historically accurate and wholly unbiased.

TRADE NEWS FROM BOSTON.

The Hornless Era Has Arrived—Single vs. Double Faced Records Discussed—Murphy with Eastern Talking Machine Co.—Enjoyable Reunion—Ditson's Big Victrola Business—Columbia Grafonolas in Demand.

(Special to The Talking Machine World.)

Boston, Mass., Nov. 15, 1909.

"Everything is to be hornless in a short time" was the prediction along Talking Machine Row this week by one of the astute salesmen, and talks with other men familiar with the trade show that there is a falling off in the call for the old style of "with-a-horn" machines, while the demand for the hornless variety is very much on the upward jump. The great variety of styles in which these can now be bought is a factor in their favor, and the price does not seem to cause any delay in sales. In fact, the cost of the really good instruments is in their favor, for people are willing now to believe that the talking machine is worth considering, because it costs enough to attract their attention.

There is quite a little feeling manifested by the jobbers of this section of the country over the evident intention of the record-makers to eliminate as much of the single-faced record business as possible and concentrate on the double-faced records. But the increase in the sale of the double-faced records and a falling off in the sales of the single-faced may operate to make them change their minds. They object to the necessity of being obliged to carry a double stock.

The Eastern Talking Machine Co. did a very good stroke of business this week when it secured the branch office of the Boston Grand Opera House for its store at 177 Tremont street. Thomas J. Murphy, a very popular and very efficient ticket-seller, formerly connected with one of the local theaters, has been established in this office, and the business that it attracts has already proven to be a very good thing for the talking machine departments of the store.

The employes of the Eastern Talking Machine Co. had a very enjoyable dinner at the Lombardy Inn on October 28, and a feature of the meeting was a lecture by T. D. Duncan, of the Business Phonograph Co. The Eastern Talking Machine Co. is having fine new electric signs placed on the front of its building, and is featuring the grand opera records in its windows. General Manager Taft was recently presented with the head of a fine bull moose shot by a friend in the Maine woods. It will be given the place of honor on the wall of the store. Mr. Taft spent several days this week in New York.

A. W. Winkelman, manager of the talking machine department of the Oliver Ditson Co., was in New York during the past week, spending much time at the Ditson Co.'s store there and then going over to the Victor factory. Business in his department is reported as big, especially on the Victrola 12 and 16.

The local trade was greatly pleased this week to receive a visit from "Doc" O'Neil, who is just back from China. He says he is going back to the land of the poppy soon.

The Grafonola library table style just brought out by the Columbia Phonograph Co. is having everything its own way at the new warerooms of the company here. The salesmen make it a point to call the attention of everybody to it, whether the person buys a package of needles or a big instrument. The result is a rapid spreading of its fame.

At the Osgood Co. this month an especially big business on Victor records is reported and a corresponding big increase in the sale of Victor machines.

SCHUBERT'S EXTENSIBLE RECORD.

G. H. Schubert, 818 Madison street, Chicago, Ill., is having quite a demand for his extensible record rack, which is referred to in his advertisement elsewhere. He is sending out some interesting literature which can be had for the asking.

FREDERICK'S IMPORTANT MOVE.

Will Place a Line of Talking Machines in His Several Branches.

W. F. Frederick, the well-known Pennsylvania dealer, who has branches in many cities throughout Pennsylvania, has been investigating the talking machine business and proposes to take on talking machines in his great chain of stores.

Splendid exhibit rooms will be fitted up in the magnificent new Frederick building in Pittsburg, where the Victor and Edison lines will be fittingly displayed.

Mr. Frederick has made his arrangements with the Standard Talking Machine Co., of Pittsburg, and without doubt this new move will prove a successful one.

Trained talking machine men will be placed in charge, as it is not Mr. Frederick's intention to give any of his personal time to the development of this branch of the business.

It will be seen at a glance, however, that he is in a splendid position to build a talking machine trade of commanding proportions.

LYLE SUCCEEDS WILLSON

As Assistant to Geo. W. Lyle, General Manager of the Columbia Phonograph Co.

Merwin E. Lyle, a nephew of Geo. W. Lyle, general manager, and for the past two years manager of the Columbia Phonograph Co.'s office in Baltimore, Md., has been called into headquarters as an assistant to his uncle. Mr. Silverstein, previously in charge of the company's Louisville (Ky.) office, is now in charge at Baltimore, Md. Mr. Lyle has been in New York for a couple of weeks, making himself familiar with the duties formerly looked after by H. L. Willson, who vacates the position of the general manager's assistant to embark in another line of business in Philadelphia, Pa. Merwin E. Lyle formally assumes Mr. Willson's place on the 15th, when the latter's resignation takes place.

The future of Mr. Willson will be followed with considerable interest by his associates in the Columbia service, as his rise in the company has been rapid and on merit. About five years ago Mr. Willson became private secretary to President Easton. In twelve month's time he was sent to Chicago as a clerical assistant to John H. Dorian, then manager. When Mr. Dorian was drafted to New York and given charge of the chain of Columbia stores in the greater city, Mr. Willson succeeded him as the Chicago manager. Subsequently he was called to the executive office as assistant to General Manager Lyle, a post he filled with brilliancy, showing unusual executive ability for a young man with a decided inclination toward organization, and in a short time he would have been made assistant general manager of the company. Mr. Willson, however, has aspirations of his own elsewhere, and he embarks in business with a brother in Philadelphia with a concern interested in coal securities, developing a new field in the anthracite section of Pennsylvania, taking hold of the promotion end.

TO MAKE ARGENTINE RECORDS.

Messrs. Freiberg and Forbush Sailed Recently on This Mission.

William Freiberg, of the Columbia Phonograph Co.'s laboratory recording staff, accompanied by Gus Forbush as an assistant, sailed from New York October 20, via the Lambert & Holt line, for Buenos Ayres, Argentine, S. A., where they will arrive on November 20. They will make a line of Argentine records, vocal and instrumental. Mr. Freiberg will be in the most progressive South American republic about a month. The records are intended only for the export department list.

The company's export department recently issued their new catalog of "Discos Dobles Columbia Neuvas Selecciones Puerto Riquenas," about 60 or 120 numbers altogether.

VICTOR-COLUMBIA LITIGATION.

Victor Co. Brings Suit Against the American Graphophone Co. for Infringement of Patent—Columbia Co. State They Will Defend Suits and Protect Dealers—Letters Issued to the Trade.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 9, 1909.

The Victor Talking Machine Co., Camden, N. J., yesterday mailed an "Important Letter to the Trade on the Subject of Victrola Infringement." It is an interesting document, as it recites and summarizes the history of the company from 1895, when the "United States Gramophone Co. started, in a small way, to manufacture gramophones," to the company of to-day, which "now control the original Berliner basic patents, and have the gramophone developed to its present condition."

Then they say, "We chose to invade the field of no one, but have created an entirely new line of talking machines and records with new and distinctive features." This leads up to the invention of the Victrola, the history, purpose and success of which is given with considerable detail, concluding with the following announcement of a suit brought against the American Graphophone Co.:

"Our suit against the American Graphophone Co., on the said reissue patent was filed on October 5, 1909, in the United States Circuit Court for the Southern District of New York. * * * Also to make the situation clear to the trade that all negotiations between the Victor Co. and the American Graphophone Co. towards the matter of licensing the latter company to manufacture the 'Victrola' type are at an end."

* * * *

When this matter was brought to the attention of C. A. L. Massie, of the legal department of the American Graphophone Co. (Columbia Phonograph Co.) in New York, he said: "Oh, yes, we made our appearance on the first Monday of November, and will file our answer the first Monday in December. There is nothing to it. We expect to win out."

The Columbia Phonograph Co. have quickly met the issue by publishing a reply, which, although its principal message is protection to dealers, also contains some extraordinarily interesting history. The letter closes with the statement that "We will defend 'successfully and at our own expense' any patent suit brought by the Victor Co. against our Grafonolas."

To assist Victor dealers in bringing the Dr. Cook North Pole record to the attention of people of their community, the Victor Co. have designed a special Dr. Cook window display that is bound to attract considerable attention. This display is a fac-simile, in miniature, of the John R. Bradley, the boat on which Dr. Cook left on his North Pole expedition. The ship is dressed in the colors of all nations, and on one of the masts appears a picture of the hemispheres, above which hangs Dr. Cook's Victor record. On the sails of the ship are invitations to come in and hear Dr. Cook tell how he discovered the North Pole. This display is sent to dealers at a nominal cost, and certainly should be taken advantage of by every dealer who desires to be up-to-date in the matter of window display.

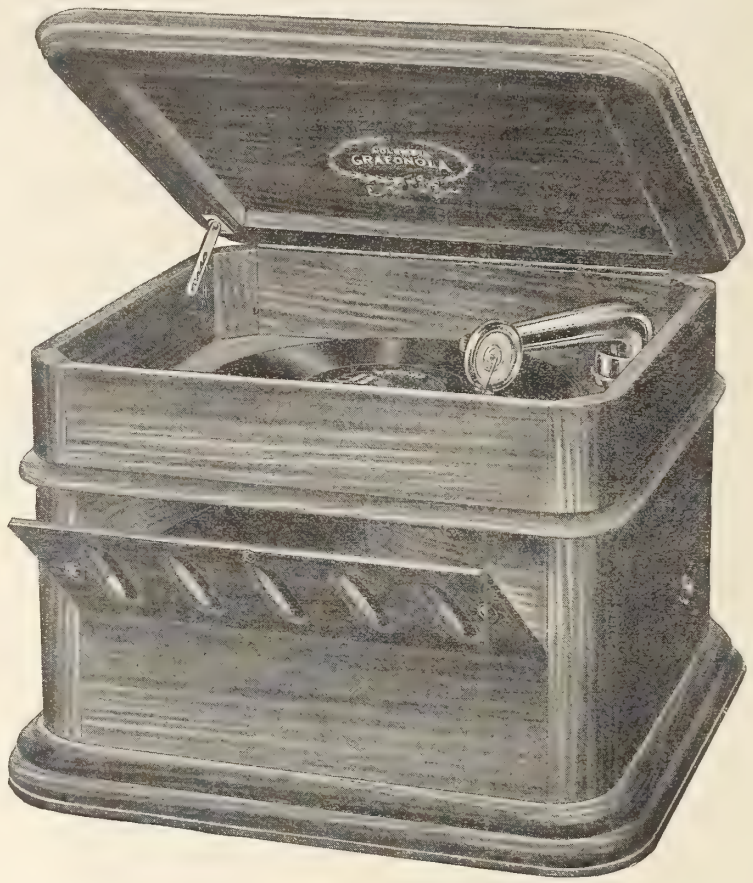
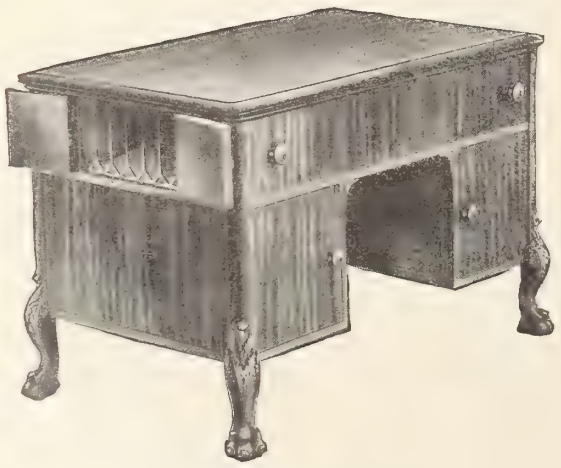
A Grafonola for



The Columbia Grafonola "Elite"—$100



The Grafonola "Regent"
Price, $200

The Grafonola
"De Luxe"—$200

a hundred dollars!

A Columbia Grafonola of entirely new shape, on the new principle of hornless reproduction; the FIRST hornless instrument ever offered at its price, the SMALLEST perfect cabinet machine yet introduced; the beginning of a new era in sound-reproducing instruments.

The Columbia Grafonola "Elite" introduces to the public the first of a new line of hornless instruments in which the acme of sound-reproducing capacity, flawless tonal qualities and unequaled neatness of design combine with economy of space and compactness of construction to a degree hitherto unknown in the art of sound-recording and reproduction.

First to be noted in the Grafonola "Elite" is the remarkable manner in which every atom of space is utilized for the production of a complete and perfect musical instrument in the smallest possible compass. When is considered the volume of tone the instrument gives forth, it must be universally acknowledged that the Grafonola "Elite" by far surpasses any product of the "talking machine" industry introduced up to this time.

Embodied in the Grafonola "Elite," and forming one of its chief features of attractiveness, is the new principle of leading the tone from the record through the reproducer and tone-arm downward into a semi-circular tone chamber, so designed as to be acoustically perfect. The tone, amplified and reinforced to a very high degree in this chamber, pours out through a series of elliptical openings in a door at the front of the instrument. Controlling the orifices of these openings is the sliding modulator panel—by which the volume of music may be reduced or augmented at will. If a maximum volume of tone is desired, the entire door—which hinges at the bottom—may be let down, thus allowing free escapement of all the tone produced.

The reproducer—the vital part of all sound-reproducing instruments—is of a new type and its reproducing capacity, sweetness, brilliance and power, are unique—faithful, natural and accurate.

In the section of the instrument immediately above the tone-chamber are the reproducing parts and the turn-table. The latter is full twelve inches in diameter, playing any make or size of disc record. Above these parts is the cover, which is usually let down when the instrument is playing. In the section below the tone-chamber is placed the motor—one of the most powerful of the four-spring type in existence. As in all other Columbia instruments the motor may be wound while running.

When closed, the Grafonola "Elite" is in shape almost a perfect square, with corners rounded throughout and the base slightly expanded for symmetrical effect. The total absence of horn and all mechanical suggestion lends to the instrument an attractiveness impossible to overlook. Only the finest selected genuine mahogany, hand-rubbed and brilliantly polished, is used in the wood part of its construction.

How would you like to have the exclusive selling rights for all the Grafonolas in your territory? Maybe they are open. Write and ask.

COLUMBIA PHONOGRAPH CO., Gen'l

Tribune Building New York City

TIMELY TALKS ON TIMELY TOPICS

As will be noted in the four-page advertisements of the National Phonograph Co., Orange, N. J., in this issue of The World, they have inaugurated one of the greatest campaigns of publicity and exploitation of their products known in the talking machine trade. Daily newspapers in all parts of the country are being used, samples of the advertisements being exhibited, with the size, date of insertion, etc. In the magazines double pages will be employed, in the choicest positions, many covers being under contract. By this extraordinary and stupendous expenditure of money the Edison phonograph and its manifold advantages of entertainment will reach "55,000,000 people and 16,000,000 homes nine times every month." This may well be termed the opening gun for the holiday trade, and such a magnificent undertaking on the part of the National Co. to popularize their goods and create a substantial market is solely in the interest of the dealer. It is therefore up to the dealer to second and aid this splendid work by following it up with local advertising. Every effort should be made by Edison dealers to reap the full benefit of this great and effective campaign in every way possible at their command. Trade is brought directly to their doors, and it remains for them to "close the deal."

Observers of passing events in the trade will note that the talking machine business is gradually but surely getting into better hands, so far as jobbers and dealers are concerned. Concerns which are vitally interested in the business from an investment point of view, and not as an expedient or an experiment, are coming to the front as the influential factors. Persons who have no capital to speak of and who depend on working their so-called "credit for all it is worth," and often more by sharp practice and chicanery, are really "undesirables." Therefore the sooner the distributers and jobbers, aided by the factories, if necessary, cut off the supplies of this class of dealer and place them on the "suspended list," the better it will be for those who give the lines true representation by carrying adequate stock and exert every effort to keep it moving. The trade has reached that stage of development where there is no longer room or toleration for "dead ones."

Perhaps something of this kind was in the mind of a particularly observant correspondent who has a wide acquaintance with the trade, its personnel and methods, when in Texas. Of his experience he writes, possibly in a slightly sarcastic vein, but evidently knowing what he was writing about, in part as follows: "The talking machine business in Texas is the poorest I have ever come across. It may be possible that the poor crops the State had in the past year may be mainly responsible for this condition. It was also apparent that a number of jobbers in the State are not alive to their opportunities, no traveling men being employed by but few of them; and it seems to me this condition should be carefully taken note of by the factories." There's the rub; the "milk in the cocoanut"—"not alive to their opportunities." One need look no further for an explanation why trade languishes elsewhere besides in Texas.

But the correspondent does not stop with criticizing the weakness of Texan methods and the only too apparent delinquencies of the Lone Star State trade. He "hands a few" to the South in general, which will doubtless be resented in quarters where the "shoe pinches," to wit: "The need of a few live jobbers in the South seems almost a necessity for the future welfare of the talking machine industry. The chief reasons for the quiet state of the business in the South may be attributed to the following: First, insufficiency of stock; second, window display could be somewhat improved; third, lack of suitable space for demonstration purposes; fourth, no advertising; fifth, poor salesmen." This is, indeed, hot shot and what may also be termed "straight goods." The question arises, is it deserved? It may be added that the foregoing strictures were written in no spirit of malice. On the contrary, the traveler was sorely disappointed in what he encountered, hence his remedial suggestions, given with the best intention and in a spirit of entire good nature.

Does anyone realize, beyond those cognizant of the inside facts, what tremendous progress has been made in the talking machine trade within fifteen years? The topic, always one of absorbing interest, was under discussion for the'steenth time by a bunch of old-timers recently, when one of them casually remarked: "In 1894 the entire yearly product of the Edison factory could have been bought on a showing of $10,000!" Presumably, this was also true of the other great manufacturers of the present day. However, everybody caught their breath when this statement was made and then probably ruminated on the potentialities of wealth.

A leading manufacturer remarked the other day that he found the utmost difficulty in securing road salesmen. The question of price or salary did not figure so much as competency. To be sure, a small army of men could be had for the asking, as it were; but "green ones" were not desired. They did more harm than good. No objection is urged against training men who have natural selling ability; but no patience is exercised in dealing with "dead ones." It is the dearth of adaptable men which is complained of, especially so that their services are so badly needed just now when business is springing up again.

Quite a compliment—and a deserved one—was paid the Eastern Talking Machine Co., of Boston, Mass., by a traveling man who had made his first trip through New England for the wholesale end of a prominent machine and record manufacturer. On reporting to his chief the road man remarked, after turning in a very good statement: "By Jove! I found the Eastern Talking Machine Co. strong wherever I went. I had the hardest work creating jobbers for our line against the Eastern. The dealers had such confidence in Mr. Taft that I could not budge them to any other way of thinking. The Eastern take such good care of orders that I failed to meet a dealer in that entire territory who had an account with them who did not say they were 'aces.' They seemed to have the goods and their shipments are right up to the minute. While I was in competition, I must take my hat off to Mr. Taft."

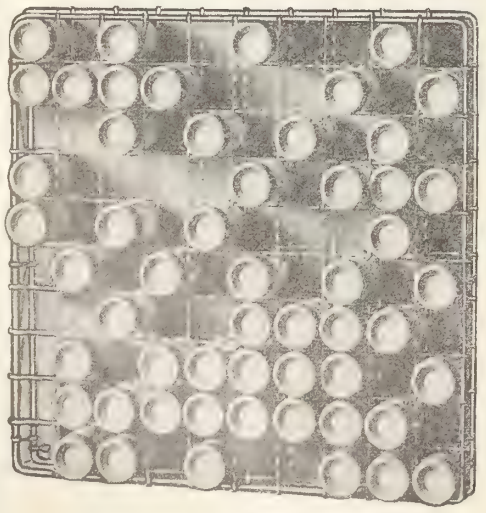
With the phenomenal prosperity attending the motion picture proposition and its immense popularity with the public, the so-called "knowing ones" in the trade pretend to trace a certain lack of interest in talking machines. Perhaps there may be something in this assertion from a superficial point of view as regards low-price machines and records; but the great demand in evidence for the high-grade goods offsets this alleged diversion of trade. Those most particularly concerned in manufacturing and marketing talking machines have recognized that improvement in the tone quality of records, variety, extent and superiority of repertoire, not to mention perfection in the machine itself, are now the backbone of the business. To be sure, low-price lines will always have a market, but the most satisfactory and profitable goods now before the trade are of the highest grade. The masses are all right, but it is the people with money, who can afford to indulge in the luxuries or near-luxuries of life, to whom the trade may appeal successfully with goods that measure up to the highest standards.

Another avenue is opened to the enterprising dealer who will make a specialty of lullaby records for "tired mothers." A newspaper writer recites the story of how the substitution of the talking machine for a wearied mother's none too musical voice, in lulling the baby to sleep, turned the trick. Of course, it was the wisdom of the father who suggested the innovation, and the music of the lullaby from the record of a high-class artist had the essential soothing effect of transporting the little one to the Land of Nod. This is a point for the dealer, and perhaps a special list of sleep-producing lullabys, warranted to produce the desired slumbrous effect, may be looked for. It is also a tip to Ada Jones, but with Len Spencer—well, Len might talk one to sleep if he had a fair chance; but his voice is too robust for the lullaby business.

Less knowledge than judgment will always have the advantage upon the injudicious knowing man.

Extra Profit from Record Sales is Possible

By Selling Record Buyers the HEISE SYSTEM WIRE RACKS



Just the thing for the home. Small Racks for 100 and 150 records made upon the same plan as our store Racks which have proven so popular with dealers.

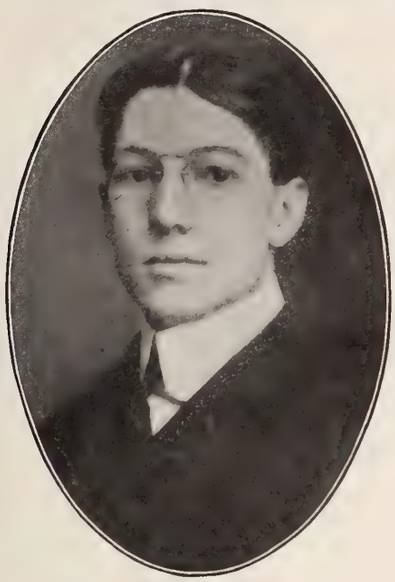
FAREWELL DINNER TO H. L. WILLSON.

The Entire Staff of the Columbia Phonograph Co. Entertain H. L. Willson at a Testimonial Dinner at the Waldorf-Astoria—His Loyalty Praised—Presented with a Magnificent Diamond.

H. L. Willson, assistant to Geo. W. Lyle, general manager of the Columbia Phonograph Co., was tendered a dinner at the Waldorf-Astoria, in New York, on the evening of November 9, by the officers of the company, the occasion being his forthcoming entry into the financial department of large coal mining properties in Pennsylvania and West Virginia, in which he has long been interested. Mr. Willson's record with the Co-



H. L. WILLSON.

lumbia Phonograph Co. is one that both he and his employers have been proud of, and only the pressure of investments that call for a great amount of detailed attention could have persuaded him to separate himself from the affairs of the Columbia Co., or could have induced that organization to consent.

During the evening President Easton, in behalf of the Columbia Phonograph Co., presented Mr. Willson with a magnificent diamond which, in his presentation speech, he described as being absolutely flawless, and typical of Mr. Willson's loyal service. Those present at the dinner were the following officers and members of the executive staff: Edward D. Easton, George W. Lyle, Thos. R. White, Sr., Frederick J. Warburton, Walter P. Phillips, T. H. Macdonald, Paul H. Cromelin, George P. Metzger, V. H. Emerson, H. A. Yerkes, H. Sheble, Irby W. Reid, C. W. Woddrop, Edmond F. Sause, W. D. F. Baker, Mervin E. Lyle, John C. Button, Frank Dorian.

Edward N. Burns, vice-president of the American Graphophone Co., and general manager of the Columbia Phonograph Co.'s export department, returned from Europe November 10 on the Princess Irene, the North German liner. He was accompanied by his family and has been away since July 24. The Carlsbad Springs claimed the greater part of his time. Mr. Burns comes back in splendid condition, the result of his rest, and is prepared to take hold of the foreign end with more energy and vigor than ever. Edmond F. Sause, his capable and affable assistant, willingly relinquishes the onerous duties of the position to his chief, though he has kept everything right up to the mark.

SALESMEN WANTED.

Outside salesman to call on New York City and local trade representing jobber. Also one for retail department. Good chance for right man. Give experience, reference, salary wanted, etc. Address "Energetic," care The Talking Machine World, 1 Madison avenue, New York City.

CONCERTS AS A MEANS OF ATTRACTING CUSTOMERS.

Dealers Could Adopt No Better Plan During the Fall and Winter Than Giving Recitals in Their Warerooms or Studios—Never Fails to Attract Customers and Is Always Profitable—How L. J. Gerson Is Winning Out Along These Lines.

The value of concerts as a means of attracting the best class of customers to the store is now widely recognized not only in the music trade, where eminent concerns like the Aeolian Co., John Wanamaker, and many others announce programs of exceeding merit during the musical season, but it is just as valuable, if not more so, in the talking machine trade. The great advantage possessed by the talking machine man, and that, too, in the line of economy, is that he has noted orchestras and all the great artists of the world at his disposal, without any extra expense.

All that is necessary is to prepare his special rooms or store; send out invitations to a selected number of people, and then arrange his program. He will find that all invited will come, and he will thus stimulate new interest in whatever line he handles, whether it be talking machines, phonographs, or graphophones.

These concerts continued weekly, and invitations sent to new people all of the time, must result in dealers reaching the very best class of people, and reaching them in a manner impossible by any other means.

These concerts may be termed "publicity" of the very best kind, and should prove a paying educational campaign. Should the dealer choose, he might make some remarks at the opening of the concert on the exact functions of the talking machine its tremendous advance and perfection, or on the fact that all the great artists of the world can now be heard by means of this machine—in fact, to the clever talker there is a splendid opportunity for an interesting discourse.

There is no town so small that it will not yield satisfactory results from concerts of this kind. It only needs a little enterprise to win out.

There is one thing clear, that the talking machine dealer who intends to remain in this industry, and to make it a success, must be up and doing. This is no time for laggards or for those who view the business indifferently. People of that ilk naturally see nothing in the talking machine business and are continually kicking about its lack of opportunities. Nevertheless, the opportunities are there, but the people must prepare themselves to take advantage of them. There is no use in sitting down and complaining. Trade will never come to a dealer who does not seek it—and seek it along original lines. The old commonplace, tried-and-found-wanting plan will not always obtain in selling talking machines. It needs the infusion of new ideas in the way of publicity to bring about results. And to our way of thinking one of the most effective means to this end is the giving of concerts.

Think of the splendid opportunities there are of framing up a program for a concert at which a dealer has all the operatic artists of the world at his disposal, as well as leading conductors and bands. How easily he can stimulate the interest of the people of his city or town by carefully written readers in the local papers, apart from the regular advertisements, in which the fact is emphasized that Mme. So-and-So, who is now receiving so many thousand dollars for each performance at the Metropolitan Opera House, New York, can be heard right here in this town by merely attending a concert at the talking machine parlors of Mr. So-and-So.

Can anyone conceive of a better means of educating the public to a proper appreciation of the splendid product being put out to-day by the talking machine manufacturers, and of listing up a goodly roster of future customers among interested people?

The splendid campaign of publicity inaugurated by Louis J. Gerson, manager of the Wanamaker talking machine department in Philadelphia, Pa., during the operatic season, whereby special lectures and Victor recitals bearing upon the operas are given in the auditorium, is proving one of the features of the season. We understand that this plan of campaign is to be also undertaken at Wanamaker's in New York. It will be helpful to the entire industry and is a move well worthy consideration. This line of work is open to all. And it will pay.

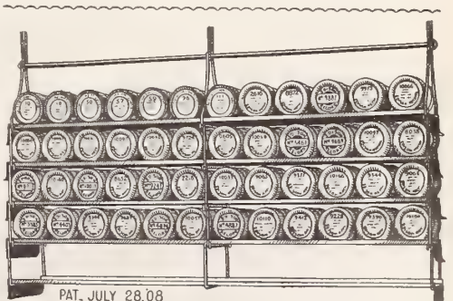
COLUMBIA WITH KOHLER & CHASE.

General Manager Lyle Closes a Big Deal on the Pacific Coast—Other Columbia Moves of Great Interest—Big Pacific Coast Concerns Represent the Columbia.

George W. Lyle, general manager of the Columbia Phonograph Co., was seen by The World on November 10, soon after he had attacked his first batch of mail upon his return from a five weeks' circuit of the country. Mr. Lyle was naturally more than busy, but he did take time to say some extremely interesting things. He visited many cities of importance in the United States during the trip. He found general business good and improving all along, and a decided improvement in the talking machine business. The improvement, according to his impression, has not been as rapid as many people at one time expected it to be, but there was an unmistakably steady and healthy increase in volume and interest.

Mr. Lyle stated that a little later he will have some interesting news for the trade, concerning important deals closed during his trip, but could only take time at the moment to report briefly that in addition to the Eilers Piano House, Spokane, Seattle and Tacoma, and the Southern California Music Co., in Los Angeles, Cal., one of the largest deals made in the talking machine business for some time was closed in the office of Kohler & Chase, of San Francisco. Kohler & Chase—a large music house known to everybody on the Coast—have just completed their new $200,000 establishment in the heart of the retail shopping center of the city, fitting up most elaborate rooms for display and sale of talking machines. They have installed a complete line of Columbia machines and records, giving a representation not excelled by that of any music house in the United States handling such goods. This arrangement also covers their Oakland store.

The talking machine department of the Simpson-Crawford Co., New York, one of the Henry Siegel chain of dry goods stores, have taken on the complete Columbia line, the contract being signed Saturday last, the initial order for machines, records, Grafonolas, etc., running into the thousands. The goods are to be delivered in ten days, and a special section will be set aside by W. C. Vogel, manager of the department, to properly display and exploit the line.



PAT. JULY 28,08

Mr. Dealer:

Are you handling Schubert Extensible Racks for keeping Cylinder Records in the home? Better send for dealer's discounts and Special Free Trial Plan. You can sell this rack for less than 3 cents a record.

G. H. Schubert, 818 Madison St., Chicago

First Announcement of Columbia

4-MINUTE Indestructible Records

"The ONLY 4-minute records that are right"

PRICE 50c.

They fit any make of phonograph or graphophone (with 200 thread attachment). They play the complete selection—averaging fully 4½ minutes—clearest, most brilliant tone you ever heard—and they NEVER BREAK and NEVER WEAR OUT!

At last a cylinder record which will play from four to five minutes, and which is at the same time *practical* and *unbreakable*, is an accomplished fact.

The one supreme obstacle in the way of producing a cylinder record of two hundred threads to the inch, instead of one hundred (the equipment of the ordinary two-minute record) and producing at the same time a record which would be commercially practicable and stand the test of wear, has so far lain in the extreme delicacy of the wax-like material ordinarily used, and the apparent impossibility of recording this astonishing number of threads without breaking down the walls, of almost inconceivable fineness, which separate the tone furrows from each other. This difficulty has been solved for all time by the production of the Columbia Indestructible 4-Minute Record.

What this means to cylinder record users is almost impossible to appreciate at a casual glance. The two-minute Columbia Indestructible Record at 35 cents, with its matchless tonal qualities and unbreakable texture, has been universally conceded to be the greatest boon to cylinder record users ever introduced. But the 4-Minute Indestructible Record at 50 cents will, it is safe to say, more than double the entertainment, economy, and profit of the two-minute record. The thinning of the tone walls, far from impairing the record in any manner whatsoever, has actually resulted in a finer, purer, clearer and more thoroughly musical tone—all this in addition to the principal gain, namely, the doubled length of the performance.

The First 20 Numbers

3001—American Patrol (Meacham).....Played by Lacalle's Band
3002—Selections from "Carmen" (Bizet).....Played by Lacalle's Band
3003—Medley of 1909 Hits (Arranged by Lacalle),
Played by Lacalle's Band
3004—Tres Jolie—Waltz (Waldteufel).....Played by Lacalle's Band
3005—Selections from "Havana" (Stuart).....Played by Lacalle's Band
3006—Dancing on the Housetop—Schottische (Christie),
Played by Lacalle's Band
3007—Selection from "Cavalleria Rusticana" (Mascagni),
Played by Lacalle's Orchestra
3008—Moraima—Spanish Caprice (Espinosa),
Played by Lacalle's Orchestra
3009—Salut d'Amour (Love's Greeting) (Elgar),
Violin Solo by W. Dorfman
3010—The Star of Bethlehem (Adams),
Tenor Solo by Henry Burr, Orchestra accompaniment
3011—Down Where the Big Bananas Grow (Barrom). Tenor and Baritone duet by Byron G. Harlan and Arthur Collins. Orchestra accompaniment.
3012—Carolina Minstrels No. 1.
3013—If I Had a Thousand Lives to Live (Solman). Tenor and baritone duet by Henry Burr and Frank C. Stanley. Orchestra accompaniment.
3014—Where the Sunset Turns the Ocean's Blue to Gold (Petrie),
Tenor solo by Byron G. Harlan. Orchestra accompaniment
3015—Medley of Plantation Songs...Quartette. Orchestra accompaniment
3016—Red Head (Franklin and Green),
Soprano solo by Ada Jones. Orchestra accompaniment
3017—When the Bell in the Lighthouse Rings, Ding, Dong (Solman),
Bass solo by Frank C. Stanley. Orchestra accompaniment
3018—Jesus, Lover of My Soul (Holbrook).....Sung by Choir
3019—What Makes the World Go Round? From "A Broken Idol." (Williams and Van Alstyne). Soprano and baritone duet by Elise Stevenson and Frank C. Stanley. Orchestra accompaniment
3020—The Arkansas Traveler.....Original Sketch by Len Spencer

Combination 4-Minute and 2-Minute Attachment for Columbia Cylinder Graphophones

Any phonograph equipped with a 200-thread attachment for 4-minute records will play Columbia Indestructible 4-minute records. The attachment for Columbia Cylinder Graphophones is a marvel of simplicity and efficiency—all you have to do is to shift a lever in order to play either 4-minute or the regular 2-minute Indestructible Records. **The same reproducer point plays both records.** $5 is to be added to the selling price of all new Columbia Cylinder Graphophones so equipped. Dealers will be able to equip Columbia Cylinder Graphophones with the 200-thread attachment for $7.50.

Columbia Phonograph Company, Gen'l

Tribune Building, New York

SUFFER FOR LACK OF FORESIGHT.

Jobbers and Distributers Although Cautioned by Victor Co. Cannot Get Orders Filled Now as They Would Wish—Failed to Order Early and Delays Are Now Inevitable—Situation Commented on by Mr. Geissler.

For many months past The World has been urging on distributers and jobbers the necessity of taking seriously to heart the requests of leading manufacturers to place orders for goods as early in the year as possible. Too many, unfortunately, have been so conservative in their tendencies that they have ignored these requests, although made repeatedly. For instance, on August 4, Louis F. Geissler, general manager of the Victor Talking Machine Co., sent out a letter, written forcefully and illuminatively, in which he emphasized the improving conditions of the industry and stated that in view of their being somewhat handicapped by extensions and building operations, which later will give them four times the capacity of their present plant, it would be wise for jobbers and distributers to order early in August the Victor goods required in October and November.

VIEW OF ASSEMBLING ROOM—NEW VICTOR CABINET FACTORY.

It is a well-known fact that the Victor Co. are not in the habit of issuing false alarms, and every remark made in this letter was made seriously, and should have been acted upon. It is true a great many distributers took the matter seriously and did anticipate their wants, but nevertheless others did not and orders are now rushing in to the Victor Co. in tremendous volume, just as usually occurs at this season of the year.

In the course of a chat with General Manager Geissler, he commented on the situation in this wise:

"One distributer has on order with us probably six or seven carloads of goods—four carloads just ordered within the last few days. He will probably only get two, or, perhaps, three, carloads between now and Christmas. I have no doubt he could have sold the seven had he ordered them in August or September, and thereby given us the opportunity of filling the order.

"Big speculators take big chances on the future. This company started $600,000 worth of extensions, which are just now nearing completion, right in the heart of the panic, knowing full well that their entire capacity would be needed by the time they were completed.

"In July and August, when we wanted our distributers to place orders, we began making up in our factories four times as many machines as surface indications at that date showed us would be needed, believing in the restoration of the trade, and now we are swamped.

"In spite of all we do in person and by correspondence to make our distributers realize that this business is one that must be studied seriously, an intelligent forecast must be made months in advance and that they should carry the stocks and not expect the factories to do so, it seems almost impossible for us to accomplish this with many of them."

These are timely words and distributers and dealers must make an effort to size up the market situation months ahead and prepare for every emergency. Meanwhile the Victor Co. are making all possible efforts to supply demands. The picture shown herewith is the assembling room temporarily arranged in the new cabinet factory. In addition to this they are still operating their old cabinet factory with double forces, working night and day.

BUY FLINT & BRICKETT CO.

The Pardee-Ellenberger Co. Purchase Springfield Dealers' Phonograph Stock—Steadily Expanding Their Business.

The Pardee-Ellenberger Co., of New Haven, Conn., have just purchased the entire phonograph stock of the Flint & Brickett Co., Springfield, Mass., and have taken over that portion of their business. This makes the Pardee-Ellenberger Co. the only Edison jobbers in that portion of New England.

The business of this company has been steadily expanding, due to the employment of up-to-date methods in every department. They are "live wires" in the talking machine field, and have built up a splendid jobbing trade. They make it a point to carry a large stock, to fill all orders quickly, and in every way to aid the dealers and advance their interests.

In the supply field the Pardee-Ellenberger Co. are having quite a demand for the Lin-O-Tone horns, which are especially adapted for Standard and Home machines. The Pardell folding boxes for holding cylinder records are also big sellers with this concern. They are most convenient for delivering records to customers and unquestionably help to sell more records—a point worth considering.

FOR FIRESIDE PHONOGRAPH.

The Place Automatic Brushes Can Now be Used on These Machines.

The Blackman Talking Machine Co., 97 Chambers street, New York, desire to announce to the trade that the No. 3 brush, formerly listed as fitting the Gem, should also be supplied on orders for brushes to fit the Edison Fireside phonograph. Suitable changes in the advertising matter will be made as soon as possible. It may be well for dealers and jobbers to refer to the advertisement of these brushes on page 27.

BIG FEES FOR MME. MELBA.

In Miss Agnes Murphy's biography of Mme. Melba some remarkable facts appear regarding the great sums of money paid her for her professional appearance. At her third concert in Sydney she received the net sum of $11,150. For appearing at a concert given by William Astor in London, Mme. Melba received 1,000 guineas ($6,250). Another item worth quoting relates to talking machine records made in New York. Here, on March 24, 1907, we read, "she was busy making records for a gramophone or talking machine company, who for the selections, which she easily completed within a week, paid her a cash bonus of 10,000 guineas ($52,500), with more to follow in the way of royalties."

Now for a great holiday trade.

HOW DO YOU ORDER DINNER?

You don't order part of your meal in one Restaurant, because they serve that portion to suit you, and the balance in another.

YOU EAT YOUR ENTIRE MEAL IN ONE PLACE

You select a Restaurant that will serve your entire meal to your taste and satisfaction. It is there you give your entire order.

BLACKMAN DON'T RUN A RESTAURANT

No; but BLACKMAN fills orders for the particular Dealers and serves them with EDISON and VICTOR goods as they want the order assorted, and the service is the best.

HOW DO YOU ORDER EDISON AND VICTOR GOODS

Are you ordering EDISON from one jobber and VICTOR from another, waiting for TWO shipments and paying TWO expressages? Stop it.

BE ECONOMICAL—ORDER FROM BLACKMAN

BLACKMAN keeps a FULL LINE of all EDISON and VICTOR goods, therefore SAVES YOU MONEY, for you need only make out ONE order, pay ONE expressage. Send in a trial order NOW and let BLACKMAN take care of your holiday requirements.

There is no worry on BLACKMAN'S part about "MAKING GOOD," and there will be none on your part after a trial, for "Satisfaction at Blackman's costs no more than dissatisfaction elsewhere."

Marked Activity in Talking Machine Field During Opening Months of Fall—Tendency Toward Purchasing Better Class of Goods—New Edison Amberola Displayed by C. E. Goodwin Throughout the West—Business Good with Talking Machine Co.—Sample Room at Lyon & Healy's—Orchestrelle Piano Casket Company Opening—Changes Among Managers and Salesmen in the Middle West—Record by Famous Evangelist—C. L. Wiswell Visits Factories—Salter Cabinets in Demand—The Wurlitzer Changes Completed

(Special to The Talking Machine World.)

Chicago, Ill., Nov. 6, 1909.

The marked activity noted during September has been maintained and further ground gained during October. While there is no tendency to speculate or overbuy, orders placed by the majority of dealers show decided confidence in the future. Dealers are preparing for an excellent trade, and conditions in the West all seem to assure a realization of their expectation. Locally, retail trade has been good. There is no question that the tendency is to the better class of goods all along the line. Especially encouraging are the reports of improving trade in the outlying districts of the city.

C. E. Goodwin Displays the Edison Amberola.

C. E. Goodwin, manager of traveling salesmen of the National Phonograph Co., was in Chicago for a few days the middle of last month, his first visit since he went East to cast his fortunes with the Edison people. He made his headquarters at the La Salle Hotel, and brought with him the first of the new Edison Amberolas to be seen here. All the local jobbers and several from other points inspected the new machine and were highly delighted with it. Everyone says that the promises made by the National Co. as to the tonal quality of the new machine are more than justified. Mr. Goodwin went from here to St. Paul and Minneapolis, and from thence went to Omaha, Kansas City, Des Moines and other points and as far west as Denver. The trip was an eminently successful one and the western jobbers were reported as having responded with most liberal orders. In fact, the output of the factory on the new $200 machine is said to be sold up for several months in advance. Local dealers and jobbers are eagerly awaiting the arrival of the new machines here, and quite a number of retail advance sales are already reported. Mr. Goodwin passed through Chicago on his return East this week.

C. E. Wilson's Coast Trip.

C. E. Wilson, general manager of the National Phonograph Co., passed through Chicago this week on his way to the Coast. He was accompanied by Mrs. Wilson.

Arthur D. Geissler's Cheery Report.

Arthur D. Geissler, general manager of the Talking Machine Co., is highly pleased with the volume of business during October and so far this month. "Current orders indicate that prosperity has returned to the talking machine trade in full measure," said Mr. Geissler. "October made a big gain as compared with last year, and we look for a very busy period between now and the holidays. The prospects are for a shortage on goods. My advices are that the Victor factory is working up to its limit and the orders from the jobbers keep pace with the output, and such a thing as accumulation of stock is impossible."

Lyon & Healy's New Sample Rooms.

Lyon & Healy have railed off an ample space in the wholesale talking machine department for a machine sample room. Samples of every Victor and Edison type, together with a fine display of cabinets, are shown for the benefit of visiting dealers. H. B. Hopkins, Manager Wiswell's chief assistant in the wholesale end, has his desk in the new sample room.

Joy in Solemn Environment.

Tom Clancy, manager of the automatic department of the Rudolph Wurlitzer Co., has always been known as a pretty live proposition, and it was perhaps perfectly natural that the National Casket Co. enlisted his aid when they opened their new warerooms, 385 Wabash avenue, the other day. There was a luncheon and doings, day and evening, and a Wurlitzer orchestrelle piano sent over by Clancy furnished spritely music the while. In spite of the imposing display of coffins there was not a "dead one" among the participants or the tunes played.

Herriman Again in Chicago.

A. D. Herriman, one of the valued members of the Columbia's western forces is "back home" again. He is now retail floor manager at the Chicago headquarters, 210 Wabash avenue. Mr. Herriman left the Chicago office four years ago and took charge of the Columbia branch at Davenport, Ia. From there he was promoted to the management of the Milwaukee store and very successfully conducted their business there until the latter part of last month, when the Milwaukee business was sold to A. J. Kundy, who has conducted an exclusive Columbia store in the northern part of that city for the year past. Mr. Kundy takes the former Milwaukee Columbia branch at 412 Grand avenue, buying the entire stock, fixtures, etc., and has the jobbing agency for Milwaukee county.

Guttenberger Takes Charge in Louisville.

E. W. Guttenberger, formerly retail floor manager for the Columbia Chicago store, has been made manager of the Louisville, Ky., branch, succeeding Morris Silverstein, who in turn takes charge of the Baltimore office, vice Merwin Lyle, who has gone to New York as secretary to General Manager George W. Lyle.

Gypsy Smith Makes Record.

Gypsy Smith, the famous evangelist, who last Sunday concluded a long series of revival services in this city, is reported as having made a phonograph record of the song, "I Shall Meet Him Face to Face," and which will be used in evangelistic services at St. James M. E. Church.

Skilton on Road for National Co.

Mr. Skilton, formerly manager of a talking machine business in Providence, R. I., is now traveling for the Edison people in Michigan and called on the local jobbers a few days ago.

Some Recent Visitors.

Walter Staats, chief accountant for the Victor Talking Machine Co., spent a day or two in Chicago this week. Among the visiting talking machine dealers the past month were John E. Moyer, Dixon, Ill.; Joseph J. Daynes and Edward E. Jenkins, of Daynes-Beebe Music Co., Salt Lake City, Utah.; Col. F. B. T. Hollenberg, Hollenberg Music Co., Little Rock, Ark.; M. M. Marin, Grand Rapids, Mich.; J. E. McCourt, Ludington, Mich.; Mr. Wookey, of the Wookey Music Co., Peoria, Ill.; Lawrence McGreal, Milwaukee, Wis.; C. A. Adams, Peoria, Ill.

Wiswell's Eastern Trip.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy, made a flying trip to the Victor and Edison factories the middle of last month. He found the former working overtime, especially in the Victrola department. The Edison plant was also rushed to the utmost and the officers were more than surprised at the demand for the machines equipped with the new Cygnet horn. Speaking of business, Mr. Wiswell stated that October on the whole made a gratifying showing. Business the first two weeks was exceptionally good. The third week of the month, both in retail and wholesale, was somewhat quiet, but the wind-up was strong. There was a good increase over September and a very big gain as compared with last year.

Phenomenal Victrola Business.

Speaking of Lyon & Healy, the phenomenal Victrola business being done at retail is a matter of general talk in the trade. It is said to be an actual fact that five Victrolas were sold within an hour recently. Of course, this was the result of fortuitous circumstances, but it simply illustrates in dramatic form the manner in which the fine old house attracts high-grade trade. They do not do it by resting on their oars, however, but by constant advertising campaigns conducted through various channels. One of the niftiest pieces of talking machine literature ever distributed by them is a booklet devoted to the Victrola, and the covers represent the machine described in the mahogany finish. The various parts are "cut-out." The doors concealing the catalog files are faithfully represented, and those to the concealed horn open, revealing the latter, which is illustrated on an inside page of the booklet. Of course, the text is forceful and peculiarly adapted to the temper of the devotees of grand opera music.

Dealers Ordering Salter Cabinets.

The Salter Mfg. Co., makers of talking machine cabinets, music cabinets, art furniture specialties, etc., report that their business is running ahead of 1907 and that their large factory is running overtime, and a large percentage of this activity is due to their fine line of horizontal, felt-lined disc cabinet, an innovation which is wonderfully popular. Their new style cylinder cabinet has also met with great favor.

Wurlitzer's Handsome Quarters.

The Rudolph Wurlitzer Co. are practically over the period during which they have been at the mercy of the carpenters and decorators. The main floor, which is devoted principally to the talking machine and small goods departments, has been widened by the addition of the space formerly occupied by the stairway. The windows have been enlarged and deepened, and a balcony above the show windows proper gives opportunity for display plainly visible from the trains of the elevated railway. The interior has been refinished in verdi oak, and beautiful new all-glass show cases and massive wall fixtures for small goods have been installed. To the left of the entrance a large space is enclosed as a reception room, and here, in addition to a few pianos, Victrolas in various finishes will be shown. This will considerably increase the space devoted to talking machines. The rear half of the floor is practically unchanged, and indeed the numerous and beautiful Edison and Victor booths and the excellent stock arrangement can scarcely be improved upon. The balcony formerly occupied by the offices is now devoted to player music. The new piano department occupies about two-thirds of the second floor, while the remainder is devoted to the automatic department, one beautiful room being given up to the Orchestrelle pianos and another to the large band organs, orchestrions, etc. The general offices occupy the front of the third floor, the balance is devoted entirely to the wholesale talking machine stock, which has double the space utilized in the former quarters, and greatly improved systems of stock arrangement. The small goods department is on the fourth floor.

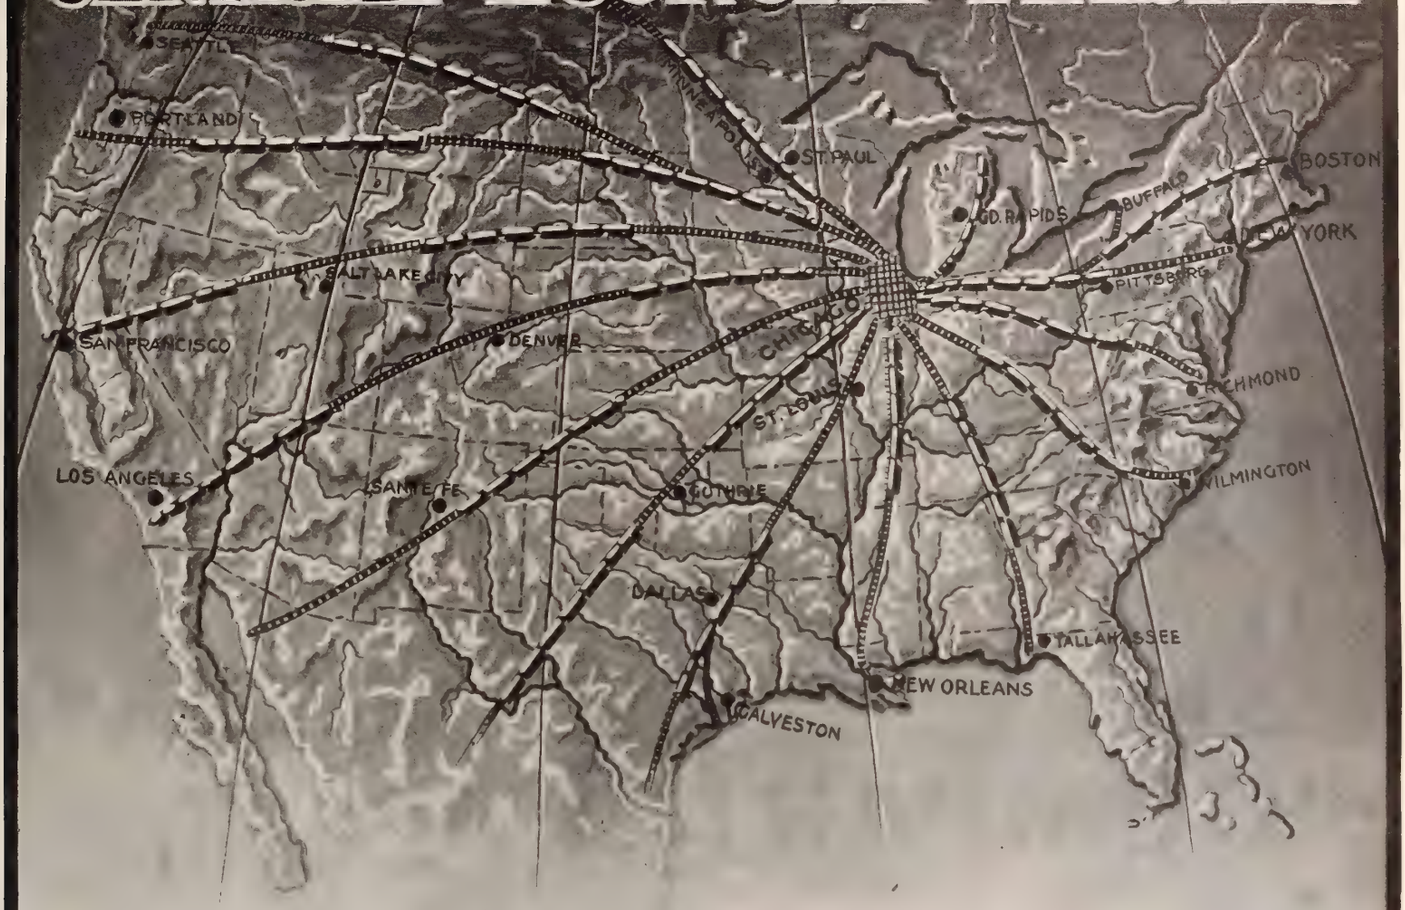
Rudolph Wurlitzer, Jr., has spent much of his time at the Chicago office during the past month, aiding Manager Uhl in supervising the completion of the new arrangements. The wholesale talking machine department of the Chicago house made an extremely fine showing during October on account of the consummation of several large new accounts.

Fuhri Visiting in the South.

District Manager W. C. Fuhri, of the Columbia Phonograph Co., and western Wholesale Manager E. C. Plume went to New Orleans this week to meet General Manager Geo. W. Lyle, who is on his return from his trip to the Coast. On Mr. Plume's arrival in New Orleans he was greeted with the sad news of the death of his uncle,

CHICAGO

The CENTRAL "ECONOMY" MARKET



Don't lose $70.00 profit on a *Victrola* sale.

Don't lose 40% or 40-10% profit on a Machine or a Red Seal Record sale, by not having, or not being able to get the goods.

Pay a little more freight or express than usual if necessary, ***but get the goods.***

Let distance and freight be no object when retail profits, prestige and service are at stake. ***Get the goods.***

The business arms of The Talking Machine Company stretch over the country from Maine to California and from Minnesota to Texas. They are the largest Talking Machine Jobbers in the world, and remember ***they wholesale exclusively.***

The Talking Machine Company
72 Wabash Avenue, Chicago, Illinois

S. W. Plume, a retired capitalist, who has been a prominent figure in the Crescent City for 25 years. The telegram announcing his death arrived in Chicago after his nephew's departure.

Bissell-Cowan's Artistic Quarters.

While the new talking machine department of the Bissell-Cowan Piano Co. has really only been opened for two weeks, President Arthur Bissell expresses himself as highly pleased with the outlook. Manager E. R. Sues has taken hold of the department in a manner that betrays his experience and ability. He has a capable assistant in O. C. Searles, formerly of Chicago and more recently in the talking machine business for himself in Oklahoma. The handsome mezzanine floor devoted to the department has been attractively fitted up and resembles more a clubroom than a formal business establishment. There are two booths, and both here and in the reception rooms Victrolas are used only for demonstrating purposes. Every type of Victor machine is carried, and Victrolas in all finishes. The Auxetophone concerts in Music Hall, adjoining the Bissell-Cowan warerooms, have been inaugurated and promise to be very successful. They are held on Tuesdays and Thursdays from 12.15 to 1 p. m., and admission is obtained only by application at the warerooms, where cards are issued exchangeable at the box office of Music Hall. Those who desire are urged to register permanently, and are mailed seats for each concert. The attendance so far has been from 150 to 300 at each recital. Music Hall has always been associated with the appearance of the very finest artists, and a particularly fine class of people are being attracted to these recitals.

Harry Salomon, manager of the talking machine, toy, sporting goods departments, etc., of Rothschild's, has returned from an eastern purchasing trip.

Inaugurating New System.

C. F. Baer, manager of the Chicago office of the Columbia Phonograph Co., is inaugurating a new system by which samples of every record in the catalog are carried in the demonstrating rooms. Above the cases will be cards emphasizing the fact that customers are not given used records; that every record bought is absolutely brand-new, and that the records in the case are used for demonstrating purposes only. Samples of the new four-minute Indestructible record have been received here and have been greeted with approval by those who have heard them. A necessary attachment for the machines will soon be ready, and a single reproducer will be used for both classes of records. The Columbia branch are having a fine demand for both the De Luxe and Regent Grafonolas, the concealed horn machines. One of the Regents (the library table style) occupies a central position in the show window.

Kreiling & Co.'s Best Month.

Kreiling & Co., manufacturers of the all-metal, ball-bearing horn connection for cylinder machines, report that October was one of the best months they have ever had. Orders from jobbers in all parts of the country show that dealers everywhere are awake to the merits of the excellent little device and are pushing it energetically.

A Fine Sporting Trip.

Arthur D. Geissler, general manager of the Talking Machine Co., and Roy Keith, sales manager, spent a few days week before last on a hunting and fishing expedition up in the vicinity of Manitowisch, Wis., near the Canadian line. They had engaged a guide but he turned up missing. Nevertheless, they made a good showing, bagged a number of duck and partridge, and Mr. Geissler landed a twenty-six-pound muskalonge.

Fibre Needles Grow in Favor.

The B. & H. Fibre Mfg. Co. have every reason to be gratified with the manner in which their efforts are being recognized by the trade. Orders for B. & H. fiber needles received during October were several times in excess of those of last year, a fact which speaks eloquently of the progress made by the wood needle. The company have any number of letters from dealers saying that the fiber needle has practically revolutionized their trade, that it has been the means of selling machines to people they could not have reached otherwise.

Starck's Department Winning Trade.

The new talking machine department of the P. A. Starck Piano Co. is having a nice trade. P. T. Starck, secretary of the company, expresses himself as decidedly pleased with the results so far. The department has a new manager in the person of H. D. Bentley, a young man of long experience in the music trade and who is thoroughly familiar with the Victor line. Two handsome demonstrating booths are being erected.

Samuel Goldsmith, who has charge of the Victor salesmen in the Middle West, spent a few days in Chicago this week.

Demand for Sectional Cabinets.

The Compartment Filing Cabinet Co., of this city, who have met with decided success on their sectional cabinets, have just brought out a new cabinet, the Compartola, which is illustrated in their advertisement appearing in this issue. It is made in two styles, one for disc and the other for cylinder cabinets. The compartment feature is the same as that in the sectional cabinet, the compartments in the disc cabinets having division walls inside separating the records, making them desirable for the double-faced proposition. The compartments in the similar cabinet are designed to receive the cartons, thus protecting the records, from which they can be conveniently slipped. The Compartolas are made in golden quarter-sawed oak or African mahogany. They have handsome art glass doors and resemble a fine bookcase. They are finished all around and can therefore be placed anywhere in the room. They make an exceedingly attractive cabinet, and the moderate price should commend them to the trade.

Improvements Under Way.

The fine quarters of the Talking Machine Co. are undergoing extensive improvements. The office is being newly decorated, and Manager Geissler's sanctorum has been enlarged and fitted with elegant mahogany desks, center table, chairs, setees, etc.

THESE MEN KNOW

that they are saving money, time and worry by placing their orders for Victor and Edison Talking Machines, Records and supplies with Lyon & Healy, where their wants always have best and prompt attention.

LET THEM TELL

how they are able to realize bigger profits and a more satisfactory business.

This Man from Northern Michigan SAYS:

Messrs. LYON & HEALY, Chicago, Ill.

Gentlemen:

Want to tell you how well pleased we were with the promptness with which our last order was filled. We have never had cause to complain to you in this regard, but this order in particular was one requiring quick and careful filling; a sale of large proportion bearing on prompt delivery. Needless to say we closed the deal without trouble. Again accept our thanks.

Yours truly,
WILLIAMS & McLOGAN,
Per J. C. McLogan.

This Man from Old Illinois SAYS:

Messrs. LYON & HEALY, Chicago, Ill.

Gentlemen: When in your house several days since, I intended asking you to explain thoroughly your system of filling orders, for I have never had so much satisfaction in having my orders handled quickly and without error, as on those placed with you.

I realize that my ability to keep all promises made to purchasers relative to delivery is important to the growth of my business, and I am glad to be able to say, thanks to your efficient service, I have never been obliged to disappoint customers. Wishing you continued success, I am,

Yours very truly,
W. S. WEST.

This Man from Far Away Mississippi SAYS:

Messrs. LYON & HEALY, Chicago, Ill.

Gentlemen: Our bookkeeper reports quite a reduction in freight cost since we began placing our orders for both Victor and Edison goods with you, even with an increase in our sales. We account for this saving through being able to combine our Victor and Edison orders, and you may be sure we appreciate this feature in buying from you. We have also been able to close several large sales through our ability to deliver the goods in record time. Accept our thanks for your past prompt attention. Very truly yours,

WACHENHEIM & MENGER FURN. CO.,
Per W. O. Menger.

Profit by the experience of these and hundreds of other dealers and place YOUR orders hereafter with Lyon & Healy. Let us emphasize the fact that our stock is complete in every detail, both in Victor and Edison lines, and orders are shipped in full on day of receipt.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 10, 1909.

If you are a pessimist and are looking rather at the seamy side of things, I would suggest that you pay a visit to the various large talking machine houses of Philadelphia, and if you don't change to the optimistic class before you get away, you are a rather curious human being. To find out just how the wind is blowing, don't climb to the sixth story of the Postoffice building and consult the weather bureau. Any of the talking machine men will tell you. And because they are called "talking machine men," don't for a minute believe that they are entitled to that name by way of sarcasm. They do the talking, it is true, but they have something to talk about that, and something that will talk back.

Every one of the Philadelphia talking machine men are in jubilant spirits these days. They are optimistic to a marked degree, and they have reason to be, for they have just closed the biggest October business in the history of the trade in Philadelphia, and from the prospects they already see before them, they expect to have also the biggest holiday business they have ever enjoyed.

There is every evidence that Philadelphia is music mad. The grand opera season in this city has begun, and on the opening night, November 9, our two big temples of music, the Academy of Music and the Philadelphia Opera House, entertained audiences limited to the capacity, with a disappointed crowd unable to get in that would have filled two equally large buildings. Six opera performances in one week, practically half as many as were sung here during an entire season only a few years ago, and the large army of opera goers are not only spending their money for the witnessing of the stage performance, but to carry these voices that they so much love into the home, to hear the divine music as they sit around the warm fireside on the cold fall and winter evenings, and to help entertain their friends.

It is this great wave of music that is sweeping over Philadelphia which has led the Victor Talking Machine Co., the Columbia Phonograph Co., Louis Buehn & Bro., the Penn Phonograph Co., the managers of Weymann & Son, and the managers of all the large department stores, as well as the smaller independent dealers to announce that they are having the greatest business they have ever enjoyed in these delightful instruments, and to foresee months of such prosperity ahead.

The head of the house of Louis Buehn & Bro., at 45 North Ninth street, says: "I have nothing to report but good business. Our October trade was most excellent and it was a better month than last year, in spite of the fact that last year we had certain salable novelties that ran our sales in October above what might ordinarily be expected.

"We are expecting very much from the new Edison Amberola. This machine is not on the market as yet, but the firm are sending out samples with their traveling men, and a few days ago we had a sample and we demonstrated it to a number of musicians and dealers, who were enthusiastic over its perfection, and we have received a number of orders for delivery as soon as they arrive. Our Victor business last month also shows a substantial gain.

"We have just gotten our catalog ready, which will be mailed to the trade within the next few days. We have enjoyed an exceptional sale of the Pegless cabinet. There are eleven different styles, ranging in price to suit all classes of customers. This cabinet is made by the Herzog Co., and we are the only people who are handling it here. We are expecting a carload shipment in a day or so, with which we hope to replenish our now depleted stock."

Among the out-of-town purchasers who called at the Buehn store the past week were: W. M. Koch, of Tamaqua, Pa., who made quite a purchase for the holiday trade, and Peter Prasch, of Paulsboro, N. J., who also left an order and reports business as very good in his section. The Buehn firm have three men on the road at present—Edmund D. Buehn, Robert Dungan, and Frank Reineck, who are traveling through the territory controlled by this firm, and have been sending in some good orders, although they did not leave until November 1.

L. L. Goodman, 327 Girard avenue, who handles talking machines extensively, is practically remodeling his entire store, and is introducing the tray system for his records. He will have one of the most up-to-date talking machine stores in Philadelphia.

The Penn Phonograph Co. also report that their business in October was very much better than last year, and they have already booked more than double the amount of holiday orders than they had at the same time a year ago. They have just received a big shipment of cabinets, and have been doing well with them. They have also received a heavy shipment of Victrolas, and are placing these instruments rapidly. "We are very optimistic regarding business," said the manager of the Penn Co., "for we have reason to be so from the flattering business that we have already done this fall and the bright prospects ahead." Charles Swartz, of York, Pa., and W. Yohn, of Yohn Bros., York, Pa., have been recent visitors to the Penn Co., during which time they purchased their holiday stock, and they report that prospects in their various sections for talking machines is very much better than it has ever before been. E. J. H. Smullem and Ralph Clarke are on the road for the firm, and have been doing very well. The Penn Phonograph Co. have had to take a warehouse at Eighth and Chestnut streets, which they expect to utilize as a carrying place for both machines and cabinets.

The Columbia Phonograph Co. are enjoying an unusual business on their hornless machines—the Grafonola Regent and Grafonola De Luxe. They have gotten back to their old home all of their old trade, and to that have been adding very much new trade, and consequently are doing the heaviest business at present in the history of the firm in Philadelphia. There is also a very large increase in the demand for the Indestructible records made by the Columbia Co., their merits being appreciated more and more every day by the trade. They are expecting a large shipment of their new four-minute Indestructible records within a few days. Their business in the grand opera records has been unusually heavy. They have been able recently to add to their line a number of new records of foreign singers yet to be heard in this country, and they really show some remarkable voices.

H. A. Yerkes, manager of the wholesale department of the Columbia Phonograph Co., of New York, was a recent visitor here; also M. Dorian, the auditor of the company. The firm have recently had some very beautiful window displays, and Manager Henderson seems to be a past master in this style of advertising.

John Wanamaker is this week starting an innovation in talking machine exploitation which will, no doubt, be appreciated by the public, and will be an excellent thing to demonstrate the great possibilities of that instrument. Louis Jay Gerson, who is in charge of the Philadelphia and New York departments, has secured the services of Joseph M. Rogers, of Philadelphia, who, now that the opera season has started, will lecture on the various operas to be given, and an expert from the talking machine department will produce records from the operas upon which he will talk. This will give the public who go to see and hear these operas a much better understanding of them, and it will also be of educational advantage to those who are not able to go to the opera.

Mr. Gerson reports that the October business of the Wanamaker talking machine department has run away ahead of last year. The sales have been almost double those of last year, and the department is at present making a drive on the Cygnet horns and the Amberola horns. Mr. Gerson has also had turned over to him the sheet music department at the New York Wanamaker store, and he is introducing good business methods into that department, and has already secured satisfactory results.

The Heppes have their improvements about finished, and all the various departments of their rearranged store are settling down in their new quarters. They have been highly complimented on the increased and commodious space that has been given to their talking machine department. They have begun a heavy advertising campaign in the suburban journals and magazines, and have been getting very good results. This is particularly so on the Victor talking machines. In these advertisements they offer to send a Victor on trial free. "You don't pay anything unless you keep it. Then pay us a small sum each month without interest. If you don't want it after trial, send it back at our expense." Such liberality is meeting with heavy mail at each period during the day, and they expect to have a tremendous business on this proposition from now on until after the holidays.

The Heppes have just received a complete line of the Victor Victrolas, in all the different styles of woods, and with these they will only be able partially to supply the names they now have on their books who desire these instruments, the Victor factory being unable to supply the great demand for the Victrolas. The talking machine salesmen of the Heppe house had their semi-monthly meeting on Friday evening last at the store, and D. D. O'Neill, the wholesale manager, lectured, and William Stiver read a paper on how to approach a customer. A very animated discussion followed.

He that has more knowledge than judgment, is made for another man's use rather than his own.

Kreiling & Company

Inventors and Sole Manufacturers

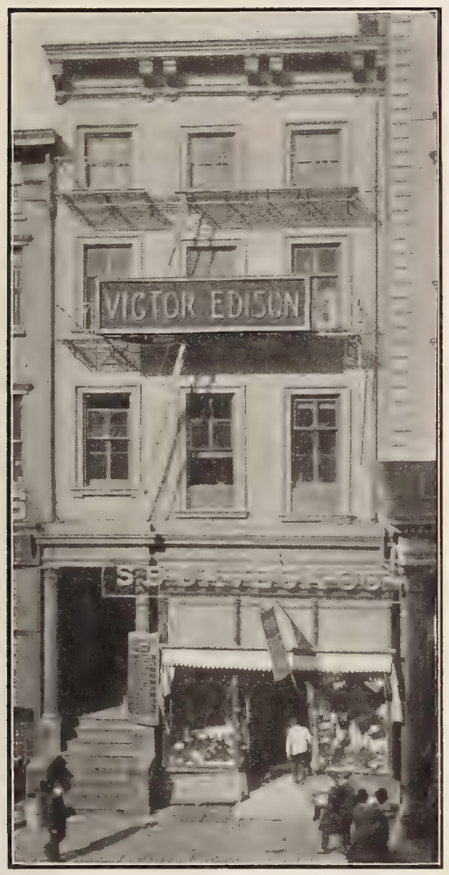
1504 NORTH 40th AVENUE

CHICAGO, U. S. A.

ENTERPRISING NEW YORK JOBBERS.

The S. B. Davega Co. Carry a Strong Line of Victor and Edison Machines, and of Supplies—Have Built a Fine Business.

As the oldest established jobbers in Greater New York, the S. B. Davega Co., 126 University place, New York, have long enjoyed the confidence of the trade. Their stock of Victor and Edison goods and miscellaneous lines of record cabinets, horns, general supplies, etc., is varied and complete, so that the dealer may have his order filled promptly and with despatch. They



THE S. B. DAVEGA HEADQUARTERS, NEW YORK.

specialize on several lines that it would be worth the while of the progressive dealer, the up-to-date kind, not to overlook. Among them may be mentioned their low-price cabinets for Victor O, I, II, III and IV, in oak and mahogany. As quick sellers their success has been little short of phenomenal. These cabinets have continuation tops and match the machines perfectly. The Davega Co.'s Magnetic needles are also commanding a ready sale. They come in three grades: double or multi-tone, loud tone, and mellow tone. Their fleece-lined rubber cover for Victrolas is an article originated by the S. B. Davega Co., and as a protector for this elegant Victor line are unequaled. The firm are now getting out a better quality cover, which will be ready for the holiday trade.

PERTINENT SUGGESTIONS FOR EMPLOYES.

To the man whose ambition is backed by cool determination, obstacles are only the stepping stones to success.

Read much and carefully; think deeply; and don't hesitate to make use of the ideas that other men have advanced.

The clerks who object to doing a thing because "I wasn't hired to do that," is a clerk who will not be very likely to be promoted to manager this year.

If you are going to be the independent sort that slams the goods down with a take-it-or-leave-it air, you might just as well begin looking for another job right now.

If the boss wants a certain line of goods pushed, push them even if it is a little more trouble. Your chief value to the house lies in your ability to help it make money.

If you want to become a trusted employe, one whom the boss will depend upon, you will have to do more than avoid evil; you will have to avoid the appearance of evil.

The fact that duty should come before pleasure doesn't mean that it is to take the place of pleasure. You need recreation as much as you need food. Take it regularly and in the open air.

The customer is the guest of the store. If you were properly brought up you know how a guest ought to be treated. Do you treat the people who come in as if you personally wanted them to come again?

BIG CALL FOR AMBEROLAS.

Initial Shop Order Already Taken—No Change in the Price of Records—Business Grows Better Every Day.

Orders for the new Amberola concealed horn cabinets have been received in such large numbers by the National Phonograph Co., Orange, N. J., that the entire initial shop order has been taken already.

Speaking of this, F. K. Dolbeer, general sales manager, said: "It is most surprising how the trade have taken hold of the Amberola. The demand has exceeded our most sanguine expectations and the sales will be tremendous. Business with us shows an improvement every day.

"There has been no change in the price of our records, excepting what may be decided upon in connection with the use of copyright music. It will be some time yet before that is definitely settled, and then, of course, the price will be higher. On our Standard and Amberol records now before the trade no change whatever in price is contemplated, excepting, as I said, in so far as they may be affected by royalty charges, and of that due announcement will be made."

MR. AND MRS. EDISON WERE GUESTS

Of Honor at the Opening of the New Theater on Last Monday Evening—Was One of the Great Events of the Year—Mr. Edison Fond of the Theater.

On Monday evening Thomas A. Edison and Mrs. Edison were guests of honor at the opening performance at the New Theater, New York, at which the leading people in social, scientific, musical and artistic circles were present. This magnificent temple of the drama has been made possible by the generous subscriptions of the cultured people who are interested in the development of the histrionic art along legitimate lines as opposed to the accepted term of commercialism. It is a subsidized institution for the production of the best in theatricals, and therefore the launching of the enterprise, something entirely new in this line, is a function of social importance second to no event in recent American artistic endeavor. Mr. Edison is very fond of the theater, especially of plays that tend to the amusing and entertaining kind, as a relief from his own absorbing and serious work, rather than of the problem order; and in music his taste inclines to the high-grade and classic description.

There can be no great success without the employment of human energy, the silent brain force that plans, initiates, drives and perseveres with indomitable strength until the project has been placed soundly upon its feet and in good running order.

Salesmanship is the fine art of making the other fellow feel as you do about the thing you have for sale.

MILWAUKEE'S ENCOURAGING REPORT

Fall Season Opens Up in Splendid Form—Herriman Leaves to Take Charge of the Columbia Chicago Store—Gimbel Bros.' Handsome Department—Talking Machine Exchange Inaugurated—The Talker in Wisconsin Schools—Dealers Urged to Join Association—Columbia Machine in Tuberculosis Campaign—An Interesting Budget of News.

(Special to The Talking Machine World.)

Milwaukee, Wis., Nov. 9, 1909.

The fall business seems to have taken Milwaukee jobbers and retailers by storm, judging from the increased activity displayed everywhere. The local retail trade, which has not been at its best, has developed in a wonderful way. Salesmen returning from about the State say that dealers outside of Milwaukee are reporting the best trade experienced in two years at least. Wisconsin is harvesting one of the "bumper" crops in its history this fall, and as a natural result money is more plentiful and general confidence is better. This accounts to a certain extent for the big increase in trade that talking machine dealers in the smaller towns are securing. In Milwaukee this wave of prosperity from the country district is also making itself felt. In addition, general manufacturing and industries of all kinds are fast returning to the normal stage, and people are finding themselves in possession of more money to invest in talking machines. Certain local dealers who make a specialty of working with the factory people say that they are more than pleased with the renewed prosperity that is making itself evident. The higher class of trade seems to be finding itself possessed of more affluence, as it is a peculiarity in the Milwaukee situation that demand for the higher priced machines is steadily on the increase. Dealers are predicting that business from now until Christmas will exceed anything experienced in the history of the local trade.

A natural sequence of the good retail trade is the fact that the wholesale business has taken on new life. Orders are coming in some cases at a greater rate than they can be handled, and jobbers are unable to meet demands for some of the newer models of machines. Dealers all over the State are rushing to stock up in preparation for the fall and Christmas trade.

A. D. Herriman, genial manager of the Milwaukee branch of the Columbia Phonograph Co., has resigned to become retail manager for the Chicago branch of the Columbia. Mr. Herriman has been succeeded at Milwaukee by A. G. Kunde, proprietor of a Columbia talking machine store at 1316 Fond du Lac avenue, who is already in charge of the downtown central store and is also maintaining the Fond du Lac avenue branch. The news of Mr. Herriman's promotion was not entirely unexpected to the Milwaukee trade, as it was known that in return for the excellent success which he has achieved in this city he was being considered for things higher up. While dealers were loath to lose him, to a man they are congratulating him upon his advancement. It is predicted that Mr. Herriman will meet in Chicago with the unusual success which has been his in Milwaukee. A. G. Kunde, the new Milwaukee manager, who has purchased the downtown central store of the Columbia, has been regarded as one of the Columbia Co.'s most enterprising Milwaukee dealers. Both Mr. and Mrs. Kunde have had wide experience in the talking machine business.

What is probably the finest talking machine establishment in any of the Milwaukee department stores has just been opened by Gimbel Bros. An extensive line of Victor machines, records and supplies is being offered to the trade. Gimbel Bros. conduct the largest department store in Milwaukee, and there seems to be no reason why an up-to-date talking machine department would not prove a most profitable phase of the business. The big store has carried a foreign line of machines in the past under the supervision of the toy department, and the business has not been pushed to any extent. The new talker department will be under the supervision of the piano department of the store, of which E. S. Bridge is manager. L. C. Parker will be in direct charge and will endeavor to make a big success of the new business. New quarters have been opened just adjoining the piano department, large and handsome booths have been installed, and the department puts on a decidedly up-to-date appearance. In addition to the regular line of Victors, ten Victrolas and an Auxetophone have been installed.

A talking machine exchange, something of an innovation in the smaller cities of Wisconsin, has been put into successful practice by Arthur Raab, an enterprising young dealer of the "chair city." Mr. Raab allows his trade to exchange their old records at any time for new ones upon the payment of a small fee. He is making the provision, of course, that the returned records must be in good condition and suitable for exchanging for others. The plan is proving to be decidedly popular, as it enables customers to enjoy a constant change of records at merely a nominal cost.

Indications are that the talking machine will hereafter play a prominent part in the "teaching of the young mind to shoot" in Wisconsin schools. Miss Annie B. McLenegan, a teacher of English in the high school at La Crosse, has installed a machine as a part of the regular teaching force in her school, and it is said that the machine is more than earning its salary. Miss McLenegan is teaching her pupils in the English department of the school to read Chaucer by means of the talker. The machine is placed in the recitation room, the pupils settle back in their seats, and the faithful talker reels off the correct and only pronunciation of the ancient and honorable English poet's work. The machine also aids in the interpretation of the music which forms the background of Chaucer's Canterbury Tales, and Miss McLenegan says the method is an ideal one to illustrate the old English ballads and lyrics. Added to this, the innovation is marking a new advance in the interest and work in the advanced English classes of the school.

The Vandenberg Music Co., of Marinette, Wis., have closed out their entire line of talking machines to W. B. Pryor, of Minneapolis, Minn.

The Edison business phonograph has been demonstrated about Wisconsin in a most able and successful manner recently by J. H. Becker, Jr., manager of the talking machine department of the Hoeffler Mfg. Co.

Lawrence McGreal is one of the leaders in a movement among business men of the city to organize a new retail merchants' association that will be representative of the business interests of the city as a whole, and which will operate along the lines of work carried on by the Chicago Association of Commerce.

As usual, this year finds the talking machine playing an important part in the great campaign of education that is being made about the State by the Wisconsin Anti-Tuberculosis Association. For the purpose of getting the message that consumption is both curable and preventable home to those who need it most the association is employing the services of a big Columbia machine. Every evening and during each day the demonstrator in charge of the exhibit gives an open-air concert of band and other instrumental numbers, interspersed at intervals by short, striking talks on the subject of tuberculosis, pointing out the dangers of spitting on the sidewalks and in public places, and outlining a system of training for the cure of the dread disease. The exhibit travels all over the State, and those in charge state that the services of the talking machine are indispensable.

William P. Hope, Wisconsin and Upper Michigan representative of the National Phonograph Co., has returned from a two months' tour of Canada. Mr. Hope organized several new agencies in the Canadian country and met with an excellent business. He is confident that Canada, with its phenomenal crops and its enormous resources in general, will prove a most fertile field for the talking machine business.

Letters have just been sent out to the members of the new Wisconsin Talking Machine Dealers' Association calling attention to the fact that a campaign for additional members among the dealers of the State will be started at once. Predictions are made that the total membership of the organization will be increased to at least one hundred by the close of the present year. The movement was put under way with a membership of fifty.

William Schmidt, Wisconsin representative of the Victor Talking Machine Co., was in Milwaukee a few days recently and reported a tremendous increase in trade.

Shipments of the Amberola, the new Edison model, are expected to reach Milwaukee by December 1. Dealers have become much interested in the new machine and have been placing some very good orders.

Weiss & Becker, of Two Rivers, Wis., have opened up with a complete line of Columbia machines and are already meeting with a good business.

Lawrence McGreal has purchased the stock of the Cream City Supply Co. at 438 National avenue, Milwaukee. The store will remain under the same management as in the past, with George Kramer in charge.

George C. Jewell, of Rhinelander, Wis., is preparing to open a new establishment and carry an extensive line of pianos and talking machines.

The novelty department of the Shadowtown Co.'s store at Baraboo, Wis., has been sold to I. Stinson. A. L. Thompson still retains the talking machine and jewelry departments.

Henry Fischer, enterprising dealer at Jefferson, Wis., is giving a series of afternoon and evening Victrola concerts.

The Hotel Bellis, at Berlin, Wis., has followed the example of hotels in many of the larger cities and is now offering Auxetophone concerts to its patrons.

W. S. PARKS NEW POST.

William S. Parks, who for a number of years has been retail manager of the Columbia Phonograph Co. at Atlanta, Ga., has severed his connection with that company and accepted a position with the recently reorganized M. R. Emmons Co., of the same city.

The Vandenberg Music Co., Marinette, Wis., have closed out their stock of talking machines and records.

THE TRADE IN TENNESSEE.

Last Few Weeks Marks Decided Improvement in the Talking Machine Business—Various Concerns Decorate for the Visit of President Taft—New Machines Win Popular Favor—Number of New Dealers—Some Recent Trade Visitors—What Jobbers and Dealers Have to Report.

(Special to The Talking Machine World.)

Memphis, Tenn., Nov. 7, 1909.

Trade in this section of the South has improved wonderfully in the past few weeks and the dealers are expecting an exceptionally heavy demand for machines and records.

The O. K. Houck Piano Co. during President Taft's visit to Memphis had their store handsomely decorated in the national colors, which were thoroughly in keeping with the gala appearance of the whole city.

A. L. Owen, manager of the talking machine department of this company, anticipates a heavy demand for the new "Cygnet" horns and cranes, of which they recently received their first shipment. These goods were sent to their dealers the same day they were received, and some difficulty was experienced for a while in filling orders; but they have received further shipments and are now in a position to supply the dealers in their territory with these new horns and cranes promptly.

The new Gem combination type phonograph has caught the popular favor, and the new Fireside machine, equipped with the Linotone horn, for which the O. K. Houck Piano Co. are jobbers, is proving very popular with the dealers, who are including this outfit and Amberol records with almost every order.

The Edison Amberola and the 28 new Amberol grand opera records recently announced by the National Phonograph Co. are anxiously awaited by the dealers, as they expect this machine to prove a big seller, as the people of this section already have Edison phonographs, and it will not require a change of records to use the new enclosed horn machine.

O. C. Stegmair, the O. K. Houck Co. traveler, is on a trip through northern Mississippi and reports that all the dealers in that part of the State are well pleased with the fall outlook.

A number of new dealers have been created in this territory in the last few months, and, with the price of cotton higher than it has been in years, the merchants are very optimistic, and it it is only necessary to show them the wonderful improvements made in the talking machine line in the last few months and point out to them the big advertising campaign which is being waged through the entire country by the manufacturers to stir up their enthusiasm.

Several trade visitors were in Memphis in the past month, among them A. C. Ireton, assistant manager of sales for the National Phonograph Co., who brought with him a sample of the new Edison Amberola, which was greatly admired and complimented by the visiting dealers.

Other visitors were F. E. Gage, of the National Phonograph Co.; Max Landay, general manager of the Talking Machine Supply Co., New York; F. H. Silliman, of the Pardee-Ellenberger Co., New Haven, Conn.; W. C. Wiley, of H. Artman & Son, Winona, Miss.; H. S. Shaw, dealer at Somerville, Tenn., and A. D. Welburn, of the O. K. Houck Piano Co., Nashville, Tenn.

Miss Maud Buford, of the O. K. Houck Piano Co. in this city, made a trip to Tishomingo, Okla., recently.

The E. E. Forbes Piano Co. are doing a fine business in the Victor line. More or less uneasiness is being felt regarding the supply of Victrolas for the holiday trade, but advices from Camden, N. J., are reassuring that every effort will be made to keep up with the demand by the factory.

The Southern Talking Machine Co., exclusive Columbia jobbers for this territory, report an excellent trade, locally and with the dealers. The sales of Columbia double-disc and Indestructible cylinder records are steadily growing. The call for the new Grafonola line is also a feature.

PROUD OF THE VICTOR.

How the Young Women's Christian Association of Camden Expressed Pride in the Products of Their Progressive City.

That enterprising little city in New Jersey which the Victor talking machine has made famous—Camden—possesses a number of residents who delight in spreading its fame broadcast. The members of the Young Women's Christian Association of that city who attended the conference at Silver Bay this summer repeated for their friends the other evening the stunt they gave at the conference on Association Day. On this day each association represented there presents in some original way the characteristics of their association, their town, or of some of the leading industries in which their members are employed. The Camden delegates had a marvelously constructed Victor talking machine, and each of the twelve delegates represented a record. With the wonderful similarity to the human voice, for which the Victor talking machine is noted the following song was given to a medley of patriotic airs:

(Tune Yankee Doodle.)

We are from old Camden town,
The town that people pity,
But friends, you do not know the debt
You owe to Camden City.

(Tramp, Tramp, Tramp.)

Hark, hark, hark, the Victor's singing
Everybody knows it's fine,
It's a splendid emblem, friends, of the town we now defend,
For Camden is a Victor every time.

(Red, White and Blue.)

Camden forever, hurrah for Camden town,
The home of the Victor that is known the world around.
We may not be record-breakers, but we're record-makers, friends.
Down in the old town of New Jersey.

(Marching Through Georgia.)

And it's down in Camden City, friends, that Campbell soups are made
To which the busy housewife oft a tribute glad has paid.
Just add hot water, serve, and only see how much you save
And there we score another point for Camden.

(Johnny Comes Marching Home.)

And just a few miles south of us our sister Gloucester stands,
She makes the Welsbach lights well known o'er all the lands.
We know of our city we've made a fuss
But if you'll have patience to listen to us
There is just one more thing we want to tell about
And that is our dearly loved Y. W. C. A.
With all its great pleasures, its joys and its blessings.

(Star Spangled Banner.)

We attest every time, though we have much that is fine,
That this, after all, is more in our line
And so often all friends we just want to say
The best thing that Camden has is its Y. W. C. A.

(Dixie.)

And when you think how much you need
A pen that stands hard wear and speed
Then I guess you will bless
Esterbrook for their pens.

A QUERY.

If soft music can be caught,
And in a rubber record wrought,
So that when we're in need of song
To ease the pressure of some wrong,
By winding up an instrument
We get the comfort therein pent,
Why may not some inventor make
A record Winter's breeze to take,
Fresh blown across the ice and snow,
To ease our superfervid woe
That August brings, and in our clime
Makes Fahrenheit work overtime?

Carlyle Smith in Ainslee's.

Edison Dealers in Dixie

We are the only jobbers in the South who can ship your Edison orders complete and ship the same day they are received.

This kind of service will help you to get retail business and place you in a position to cope with the big mail order houses of the North and East.

Service and Satisfaction

We can give you better service and satisfaction, because our large stock of Edison Phonographs and Records and perfect organization is devoted solely to your interest.

Sign a Contract with Us

Our warehouse is full to the brim of just the goods you are going to need in the next few months and if you haven't signed a contract with us, drop us a card to-day and we will send contracts for your signature.

That will put you on our mailing list and you can then get your share of the benefits that are sure to come to the dealer who gets what he orders and gets it just when he needs it.

Hear the New Records Each Month

Also tell us to send our representative to see you each month with the samples of the New Edison Records.

We will be glad to do this and it will help you a whole lot in placing your order for new records.

Let's get together for our mutual benefit.

WILLIAM F. NYE
NEW BEDFORD, MASS.

MAX LANDAY'S GREAT TRIP.

Popular Talking Machine Man Relates His Experiences and Impressions Gained Upon His Visit to the Pacific Coast—Found Dealers and Jobbers Alive All Along the Line—Talking Machine Business of Canada on the Increase and Future Very Promising—Victor Line Strong in Middle West—Texas Methods Might be Improved—Well Received and Extended All Courtesies in Every City Visited.

Max Landay, of the Talking Machine Supply Co., New York, who started away on September 15 for the most extensive trip he had ever undertaken for his concern, returned on November 3 greatly pleased with his experience and the business booked. When The World asked Mr. Landay about his journey and something of the people he met in the trade at the places he visited, he replied:

"Upon commencing my trip to the Pacific coast I started up through New York State, and in calling on the trade at Albany and Schenectady found that the jobbers were doing a comparatively good business in the Victor line and were anticipating a very heavy fall business for Thanksgiving and Christmas. At Utica conditions were not quite so good, as the summer trade in that city had been somewhat discouraging; but the jobbers, nevertheless, spoke in a hopeful vein and assured me that they were going to do their utmost to create a large demand for their respective lines that they represented this season, and spoke very optimistically regarding the results they expected to attain. At Syracuse, Rochester and Buffalo business was reported to me as being fairly good, with anticipations of a larger volume this fall, exceeding what they enjoyed last year.

"In Toronto, Canada, the leading jobbers have been doing a very large business all through the summer and were looking forward to still greater trade. It seems to me that the talking machine business in Canada is on the increase, and will no doubt continue so for several years to come. Returning to Cleveland, O., by way of Buffalo, I found that the leading jobbers in that city were quite pleased with the outlook, and claimed that this fall their business will easily equal that of last year, and would not be surprised if it exceeded it by a good, round figure. Business at the time I called there was very encouraging, especially in Red Seals and Victrolas, of which they were selling three and four times as many as they sold in the same time last year.

"At Detroit, Chicago, Dubuque, St. Paul and Minneapolis trade was still better than in the previous cities that I passed through, especially in the Victor line. An exceptionally heavy business is being done in Victrolas and Red Seal records. The outlook in these cities is bright, and from the information received from all of the jobbers an enormous trade will be done in November and December.

"My route thereafter led me through Des Moines, Omaha, Lincoln, St. Joseph and Kansas City, and I found business to be steadily on the increase, with every expectancy of a still further expansion right along. While in Kansas City I was shown through the new building of the Schmelzer Arms Co., on Grand street, in which an entire floor has been set aside and fitted up in the most elaborate manner for the sale of Victor goods. The retail quarters, in which eight handsome rooms for demonstration purposes were built, are the finest I have seen. That such a large amount of money should be spent for fixtures was not surprising to me, as the Schmelzer Arms Co. are great believers in the talking machine business, not only of the present, but the future also. In calling upon the J. W. Jenkins Sons Music Co., of the same city, I learned they had made a number of changes and increased their talking machine department by erecting four splendidly equipped demonstration rooms on the main floor, at the same time continuing to use the entire third floor of their building for the wholesale end of the business.

"Stopping at Denver I found trade good, and, upon calling on the Knight-Campbell Music Co., I ascertained that a number of changes in their talking machine department was being made, as their business has been growing and required larger space. The demand for high-class records and machines encouraged them to erect most elaborate quarters for demonstration purposes, which were just being finished at the time of my visit. The remainder of the jobbers in that city reported a good, steady business. At Salt Lake City still more activity in the enlarging and fitting up of spacious and elaborate quarters for the handling and demonstration of high-class goods was noticeable. The most enthusiastic concern there is the Consolidated Music Co., formerly the Clayton-Daynes Music Co. These people have lately added the Victor line, from the jobbing point of view, and are most optimistic as to the amount of business they will do in the coming holiday trade.

"My route thereafter led me through Spokane, Seattle, Portland and San Francisco, and, upon calling on the leading distributers of talking machine in these cities, was surprised at the enormous amount of business that was being done in the Victor line, and which, in my estimation, was about the healthiest condition of the business that I had run across on my trip so far. The demand in general was for high-priced outfits, especially Victrolas and Red Seal records. The people on the coast are great lovers of high-grade music, and therefore the demand for high-grade machines and records was not surprising. All along the coast the question that seemed to be uppermost was whether they could get enough goods for the coming holiday trade. I remained some time at San Francisco on account of the many friends in the business whom I have there, and the city in itself made such an impression upon me that I was reluctant to leave. At Los Angeles there is an extraordinary large demand for high-grade machines and records, and the various talking machine establishments possess elaborate quarters for the demonstration of their goods, which accounts for the heavy sales.

"So far as Texas is concerned, trade is not what it should be. I do not wish to make any unfavorable criticism, for it is not my function to pass judgment on matters of this kind, as the jobbers and dealers in that great State doubtless know their own business best and how it should be done from their own viewpoint. However, their establishments and the manner in which trade is handled does not compare favorably with other places I have visited en route. I could, of course, offer a few remedial suggestions, but as I was courteously received and kindly treated I will refrain. In New Orleans, Memphis and other southern cities business was better than in Texas, but still it was not up to the mark. Some of the jobbers, however, are doing a moderate business and pushing the Victor lines in the most energetic manner. Altogether, I was pleasantly received everywhere, and for the many courtesies extended me I wish to express my sincere thanks; for when any of the gentlemen, to whom I am greatly indebted for the kind manner in which I was treated, visit New York it will afford me much pleasure to reciprocate."

MAX LANDAY.

CATCH TALKING MACHINE THIEVES.

Boston Police Make Several Arrests in Connection with Looting of Eastern Talking Machine Co.'s Stock—Losses May Amount to $1,500.

(Special to The Talking Machine World.)
Boston, Mass., Nov. 3, 1909.

In the arrest last week by Inspectors Linton and Gleavey of two men, one for larceny of phonograph records and the other for receiving stolen records, a systematic looting of the Eastern Talking Machine Co. has been uncovered, according to the police, and there is a strong possibility that more arrests will follow.

The men arrested are William J. McGee, 38, of 132 Selwin street, Roslindale, on the charge of larceny of records to the value of $75 on October 13, and Henry Farwell, 45, of 26 Cortes street, for receiving stolen records to the value of $30 on April 15.

This is the third arrest in the case, as the same inspectors arrested E. J. Thiessen on October 22 for the larceny of records from the company. Thiessen was in the employ of the company. It is thought that the larcenies will aggregate $1,500.

It is alleged by the police that Farwell approached Thiessen and told him that if he would ship records to a certain address he would find a buyer for them. This Thiessen is alleged to have done, and the police base their claim of receiving stolen goods on this action.

It is also claimed that in October McGee went to Thiessen and told him that he had a customer who had been buying records from Farwell and who would buy all that Thiessen would let him have. He advised Thiessen to send the records to a certain address, and the police claim that McGee received these records and disposed of them, receiving the money.

The inspectors say that they have located teamsters who have bought these records, but it is doubtful if action will be taken in their case, as there is some doubt of their intentional guilt. A phonograph cabinet, owned by the company, which disappeared, has been located, and it is claimed that a Roxbury man may be arrested in the case.

Unless your financial affairs are under complete control, you are walking on the brink. Don't keep putting money in faster than you can get it. A small business well controlled is better than a big one that shakes above your head.

IMPROVEMENT IN CLEVELAND.

Trade in Better Shape Than Since 1907—Several Dealers Remodeling Stores—Good Reports from Jobbers—On Trail of Defaulter—New Store Opened by Chas. I. Davis—Change in Ownership of Arcade Store—What Various Houses Have to Report Anent Conditions in Cleveland and Locality.

(Special to The Talking Machine World.)

Cleveland, O., Nov. 4, 1909.

More apparent during the past month than since the fall of 1907, the general improvement in business conditions is having its healthful effect on all lines of trade, and is especially noticeable in the talking machine trade. Many of the dealers are remodeling, decorating and refitting their stores, and laying in an ample supply of goods in preparation for the advent of a good holiday business.

Jobbers report increasing activity, both locally and from outside localities, and are busy filling orders. Practically all the local dealers report a continued increase in trade, and are quite optimistic in their views as to the future of business.

Frequent eulogistic mention is heard of the new Columbia Grafonolas and the Edison Amberola, and dealers anticipate their popularity will result in many sales to the select class of customers, and greatly increase the popularity of the talking machine. The local representatives of the Columbia Co. are having many inquiries regarding the Grafonolas, which leads them to the conclusion they will prove exceptionally popular.

Louis Devineau, inventor of the Ideal horn and biophone, an ingenious machine, to play a disc on a cylinder record machine, who was secretary of the sinking fund commission of Cleveland, whose accounts were found short after he had forwarded his resignation from Europe last January, has been traced to Switzerland by bonding company detectives. It is believed he will be captured and returned to this city, where indictments charging him with forgery and embezzlement to the extent of $12,800 await him.

A. F. Peebles has withdrawn from the Akron Graphophone Co., and engaged with the Diamond Rubber Co., of that city.

The new tore of Chas. I. Davis, 418 Euclid avenue, was opened to the public October 23, with a complete line of Victor and Edison goods. The store is large and elegantly fitted up, with fine demonstration rooms. The location is next the Opera House in the business center of the city. In connection with the talking machine business a large space is devoted to sheet music, much of it Mr. Davis' own publication, demonstrations being given throughout the day to the accompaniment of piano and voice. The talking machine department is in charge of Elsie M. Wicks, who for the past three years was in charge at McMillin's. She is thoroughly versed in the talking machine business. Mr. Davis is a young man of energy and experience and is making a success of his enterprises.

C. H. Denslow has sold the Talking Machine Store in the Taylor arcade to A. C. Parsons, formerly with B. L. Robbins & Co. When asked as to his future move, Mr. Denslow said: "Just at this time I do not desire to state, but I have two or three propositions up my sleeve, and within the next few days you will find me again in the retail trade, with a larger and finer store than before."

The Eclipse Musical Co. report an excellent jobbing trade. "The fall business has opened up briskly," said Mr. Lowell, manager, "and we are now fairly rushed with orders for machines, records and cabinets. Retailers generally throughout this section are replenishing their stock in preparation for the holiday trade, and indications are that it will prove very profitable. We have received many inquiries regarding the new Edison Amberola, and it unquestionably will attract many buyers."

The Geo. J. Probeck Co. report excellent sales of Columbia graphophones and are busy in both the wholesale and retail departments. A. W. Robertson, of the firm, said: "Although October is usually rather a quiet month with us, this year our sales ran considerably ahead of the same period a year ago. The steady improvement in financial conditions is partially the cause, and the other reason is the increasing demand for Columbia double-disc and indestructible cylinder records. Our older customers are 'regulars,' and coming in between are many new faces—new users of the Columbia products. We look forward with confidence to a large holiday and winter trade in machines of all types from the 'library table' Grafonola down."

"There has been considerable improvement in business in the past two weeks," said Phil Dorn, manager of Collister & Sayle. "Business generally, in both the wholesale and retail trade, is improving, and was very good all during October. There is an expanding demand for the higher-priced—the best grade of machines, covering the entire line of Victrolas. And the same is true in regard to records. We are having increasing sales of Red Seals, while the double-faced records are growing in popularity. Our patrons are delighted with the new list of Victor November records and they are finding ready sales."

Business during October at the store of the W. J. Roberts, Jr., Co. is reported to have been very good. "There has been some increase in trade from day to day during the past month," said Andrew V. Businger, "and November has started in very promisingly. The last day of October was the best since opening up here in our handsome store. Record sales have been good, with several good sales of high-grade outfits. There is a steady, growing demand for machines, cabinets and records, also many inquiries on complete outfits. Our repair department is kept busy cleaning and overhauling machines for winter use."

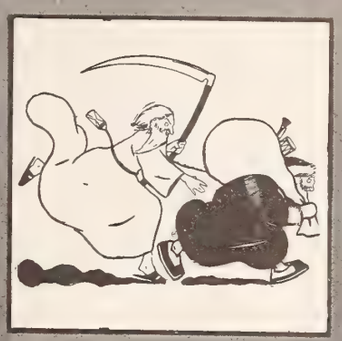
"Trade is improving very materially," said W. H. Buescher, of Buescher & Sons, "especially in all the better lines of goods. We are making good sales of Victrolas and there is an excellent demand for all the first-class records. It is a little early to prognosticate, but I look for a fine holiday trade, and we are making ample preparations to meet it."

Evan Williams, the noted American tenor, called at the store of Buescher & Sons a few days ago, and listened to some of his new Victor records. He stated that they were perfect productions.

John Reiling, proprietor of the West Side Columbia talking machine store, says business is picking up, and has considerably increased in the past two or three weeks. He stated he was selling machines right along and having a good record trade, but was still experiencing trouble in getting foreign records from the factory. A large number of his customers are foreigners, and while they buy all kinds of records, are partial to their mother tongue.

The Bailey Co. are still putting finishing touches to the new equipment of the music department. Hanging some fine paintings in the demonstration rooms, laying new rugs, gilding moldings and lintels and gold-lettering the doors of the various rooms. "Our business for the month of October," said Mr. Friedlander, manager, "was a big improvement over any previous month this year. There is an increasing call for Victrolas, and in fact for all the higher-grade goods. We are selling a good many Zonophones, and the new combination type Edison machine with cygnet horn, is proving very popular. Since this horn came out it has been selected on all the Edison machines we have sold. I think the volume of trade will expand from now on indefinitely."

At the close of six months' business since their opening last April, Mr. Goodman, of the Goodman Piano Co., expressed himself well pleased with results. The company have drawn a large clientele to both their piano and talking machine business and feel quite proud of their achievement. They are also receiving many in-



Christmas isn't far ahead

The biggest selling-time of the year is here right now.

How are you stocked up on Victor goods?

We don't need to remind you of the need of having a full assortment on display; you're too big a business man for that.

What we *do* want to remind you of is:

You can send us your "last minute" Christmas order, large or small, and we'll guarantee to ship every item the same day we get the order, and not an extra cent to pay.

We're "minute men." We've got on hand an enormous stock of Victors, Victrolas, Victor Records, record cabinets, horns, fibre cases, needles, repaired parts and supplies—we never have to send to the factory to finish out an order. And, handling nothing but Victor goods, we can get out our shipments more quickly and accurately than a jobber who handles more than one line.

Don't run any risks of losing profit this Christmas through a slow jobber. You don't have to. Let us prove how fast and accurate and accommodating we are.

No doubt you're having holiday calls for record cabinets. We make cabinets which exactly match each style Victor. These and all our other Victor goods are clearly described in our handsome catalogues. You ought to send for them to-day.

New York Talking Machine Co.
83 Chambers Street
New York
Successors to
Victor Distributing and Export Co.

quiries for the Reginaphone, which is proving a very popular instrument.

H. L. Tinker, manager of the May Co.'s talking machine department, reports a fine trade during October and good prospects. Their Victrola trade is great. They are getting in a complete line of Music Master horns and some new style cabinets.

Aldrich, Howey & Co., who carry the Columbia graphophones, report improving business.

The Hueter Jewelry Co. are devoting considerable space to the talking machine department, finding it a most profitable adjunct to their business.

Flesheim & Smith carry a line of Victor machines and Zonophones and records, and say their patrons are highly pleased with both. "The up-to-date product," said Manager Mull, "and the enterprise of the Victor Talking Machine Co., in presenting the public with high-standard instruments, and a repertoire of high-class music, together with their elaborate scheme of publicity, is giving life and impetus to the business. As employment increases demand for popular-priced machines also grows."

E. E. Kellogg, formerly with the Scott & Jones Co., of Youngstown, O., has just taken charge of the talking machine department at McMillin's.

Trade is reported improving right along at the store of B. L. Robbins & Co. "We are making sales of XII and XVI Victrolas, and the demand for higher-grade goods is excellent," said Mr. Robbins. "Our record trade is daily increasing, and I expect a great holiday trade, especially in the best lines of machines, cabinets and records."

The Coblitz Bros., who handle the Victor and Edison lines, are building up a good business and have quite a call for foreign records.

Brown Bros., who handle the Columbia disc graphophones and records exclusively, with L. H. Byrne in charge, report a marked improvement in business, as does H. E. McMillin, who states that the call is principally for higher-grade goods.

B. L. Robins & Co., report some excellent sales of Victrolas—XII. and XVI.

The Gottdiner & Wicht Co. are making a fine display of Victor and Edison machines in their music department, which is being developed with success.

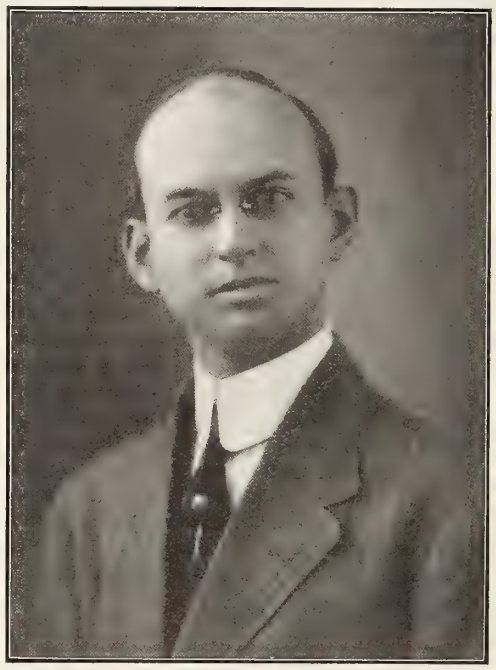
D. D. O'NEILL WITH HEPPE.

Doing Good Work as Manager of the Talking Machine Department of C. J. Heppe & Son, Philadelphia—An Experienced Man.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 6, 1909.

D. D. O'Neill, whose portrait is here reproduced, has assumed the management of the wholesale talking machine department of C. J. Heppe & Son in this city. He was formerly assistant traveling sales-manager for the Victor Talking Machine Co., and has a wide acquaintance in the trade. He is planning some important moves, whereby the Heppe business will be materially augmented. He is a gentleman of pleasing appearance, good executive ability and is a distinct acquisition to the Heppe forces.



D. D. O'NEILL.

MRS. EDISON GETS LOST RING.

Lucky Day for Finder When He Returns It After Six Years.

Mrs. Thomas A. Edison, wife of the famous inventor, recently recovered a diamond ring worth $1,100 which she gave up as lost six years ago. The young man who found it at that time and had kept it ever since, believing it to be without value, was rewarded with a good-sized check and the promise of a job, something he has been in want of lately.

Robert F. McCarthy, of 52 Mount Vernon avenue, Orange, was the lucky man. Six years ago, when he was still a student in St. John's School, he was chestnut hunting in Llewellyn Park, not far from the Edison mansion, when he found the ring among the leaves. He thought, because of the size of the stone, it must be imitation. He showed it to friends, who thought the same way about it. He tried to sell it for anything anyone was willing to give time and again, but none would buy. Several times he loaned it to friends who wanted to adorn themselves.

Only a few days ago McCarthy was told by an acquaintance that it was a real diamond. Then he decided to make a house-to-house canvass of the park. He began with the Edison house.

Another large batch of Columbia dealers is reported as having been signed up during the past week, and H. A. Yerkes, manager of the wholesale department, is greatly pleased at the way in which the trade are taking up their proposition.

THE WAY OUR DEALERS LOOK AT IT

No. 517. Height 34 in., Width 19 in., Depth 17½ in. Golden Quartered Oak, top, front and back. Will hold 125 Cylinder Records in the Original Flannel Lined Cartons.

They tell us that **UDELL CABINETS** outsell others simply because the customer sees wherein **UDELL CABINETS** excel.

One of our Jobbers says when we show a **UDELL CABINET** we feel sure that the customer will not find anything to criticise, and as **UDELL CABINETS** don't cost us any more than others the sale is usually made.

Another point in favor of buying **UDELL CABINETS** is that you have so many patterns to select from.

For the trade's benefit we have recently issued a beautiful 32-page catalog arranged primarily as a **Sales Help** to the dealer using it.

Many Cabinets will be sold in November and December, and the number you sell will only be limited by the energy and salesmanship that you and your employees possess.

If the cabinets handled are **UDELL CABINETS** your sales will be greatly accelerated.

Of course the first thing to do is write for the Catalog.

DOINGS IN INDIANAPOLIS.

Business in Fair Condition—Tax-Paying Hurts Trade—Busy Winter in Prospect—Auxetophone in Hotel English—Geo. W. Lyle a Visitor—Wulschner-Stewart Music Co. in New Quarters—New Grafonola Models Attract Attention—Moving Picture Houses Score Point in Sunday Opening.

(Special to The Talking Machine World.)

Indianapolis, Ind., Nov. 6, 1909.

The talking machine business in Indianapolis is in fair condition. Local jobbers report a nice increase in business during the last month, and predict that the jobbing business for the fall and winter will be good. City business has been rather dull for the last month, this being due largely to the fact that it is tax-paying time and that a city political campaign has been on in Indianapolis. Dealers do not see, though, why after a few weeks the retail business should not be good, and in fact they are looking forward to a good fall and winter business in the retail line.

Mr. Hugg, the representative of the National Phonograph Co., spent a day or two in Indianapolis introducing the Amberola—the new hornless Edison.

The cafe at the Hotel English, one of the largest hotels in the city, and named for former Congressman W. E. English, is using an Auxetophone. The instrument is making a big hit with the patrons of the cafe, and talking machine dealers believe it will give the managers of some other cafes some ideas which may be worth while.

General Manager George W. Lyle, of the Columbia Co., stopped off in Indianapolis for a day or two recently, with Mr. Devine, manager of the Columbia Co. store in this city. Mr. Lyle was on his way to the western coast.

The Wulschner-Stewart Music Co. have moved into their large new home farther north in Pennsylvania street. The talking machine department of the store is one of the features of this institution, and it will be in the charge of a man specially trained in this business. The company will retail and job the Victor and Edison lines.

The Columbia branch store in North Pennsylvania street has been showing the Grafonola Regent and the Grafonola De Luxe. Both are meeting with a very cordial reception from the Indianapolis people who like music. Mr. Devine, of the Columbia store, predicts big things in a selling way for these instruments.

The owners of the moving picture shows in Indianapolis stole a march on the people of Indianapolis who oppose the opening of such shows on Sundays. According to the law here theaters may operate on Sunday only when a portion of the proceeds go to charity. This was tried and the newspapers and some of the ministers raised a howl. Then the moving picture show men opened their places on Sunday and charged no admission price, letting the patrons put whatever amount they wished in the contribution box. There was still wide objection, and it was intimated that charity was getting a very small proportion of the proceeds.

It was at this time that the moving picture show men showed their ingenuity by organizing a charity society of their own. They did this because they were unable to find any existing charity organization in the city that would permit them to use its name in giving the Sunday performances. The charity organization formed by the picture show men was called the Citizens' Charity Association, and articles of incorporation were filed for it at the office of the Secretary of State.

After this charity organization was formed all of the nine downtown houses opened on the following Sunday, and at the doors stood men wearing badges bearing the name "Citizens' Charity Association." These men called attention to the fact that a contribution box was waiting for donations. The donations varied from one cent to ten cents. Some of the best-known people in town were named as incorporators of the society. Officers have not been elected as yet, but Charles L. Sutherland, who owns a number of picture shows, says that an election will be held soon.

All of the moving picture shows in Indianapolis report a good business for the last month. The increase in business was noticed among the show houses in the outskirts of the city as well as in the downtown houses.

Building Inspector Winterrowd conducted an examination of applicants for licenses as operators in moving picture shows. There were nine applicants, and all except one passed a successful examination. One of the questions asked was, "What would you do in case of fire?" The correct answer was that the operator would first extinguish the lights in the machine and then try to put out the fire. One applicant answered that in case of fire he would try to put it out. This and answers to some other questions convinced the inspector that he should not have a license.

NO DANGER OF PUBLISHING.

Talking Machine Manufacturers Not Contemplating Entering Music Publishing Field Despite Reports.

The story is again revived that the record manufacturers were contemplating entering the music publishing business in order to circumvent the royalty charges designated in the copyright act. A paper given over to flippant remarks about things theatrical and musical dwells upon this matter as if there was something actually "in it." Neither one of the talking machine concerns have entertained such a proposition very seriously quite recently, and it now seems as if the copyright owners are realizing they have been handed a gold brick by the law. When a piece of music is worth recording—and there are a few—the record people are willing to pay the charges, but at the same time they have ceased listing junk.

C. H. WILSON TO PACIFIC COAST.

General Manager of the National Phonograph Co. on Combined Business and Pleasure Trip—To Visit Edison Jobbers en Route.

C. H. Wilson, general manager of the National Phonograph Co., Orange, N. J., left for a trip to the Coast and intermediate points, October 30. He is accompanied by Mrs. Wilson, and in lieu of the vacation which he was unable to take during the summer, the journey will be one of pleasure as well as of business. Mr. Wilson will call upon the Edison jobbers en route, and feel the pulse of trade, and will be away about two months.

The Universal Talking Machine Mfg. Co., Newark, N. J., report a very fair business, but slightly under the mark made for the fall trade. Improvement is being shown right along, remarked General Manager Macnabb, but it lacks briskness and activity.

MUNSON FOLDING HORN

FOR DISC AND CYLINDER MACHINES is the only one-piece indestructible Folding Horn on the market. Made of the finest quality of selected Leatherette—in plain solid colors—Gold, Black or Red, inside and out.

WHEN FOLDED AND CARTONED it occupies a space only 28 inches long by 3½ inches square.

THE MUNSON FOLDING HORN

Greatly improves the tone of the records and means increased record sales. Retails $7.00

Further Particulars and Discount Sheet on Application.

650-652 NINTH AVE. FOLDING PHONOGRAPHIC HORN CO., NEW YORK CITY

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., Nov. 10, 1909.

RECORD-HOLDER. William T. Long, Sumner, Wash. Patent No. 935,379.

The invention relates to phonographs, and its object is to provide a new and improved record-holder arranged to accurately and securely hold the record in central position, to accommodate records of different sizes, to compensate for variations of the inside diameter of the records, to hold the record against accidental shifting in an axial direction and to allow placing the record conveniently in position on the holder or removing it therefrom. For the purpose mentioned, the holder is provided with a plurality of bars for engagement with the inner surface of the record and mounted to swing in unison toward and from the axis of the holder, the bars being pressed in an outward direction by a spring device.

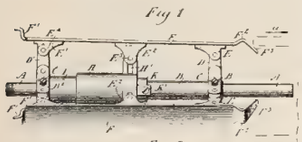

Fig. 1

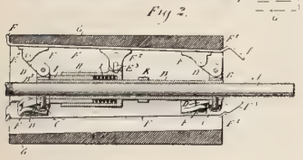

Fig. 2.

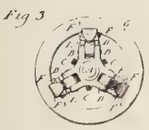

Fig. 3

Figure 1 is a side elevation of the improvement; Fig. 2 is a longitudinal central section of the same and showing the record in place; and Fig. 3 is a front end elevation of the same.

PHONOGRAPH. Peter Weber, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,266.

This invention relates to phonographs of the type wherein the sound box is carried on a traveling carriage to which a progressive movement is imparted by means of a rotating feed screw, so that the reproducer or recorder stylus traces a spiral path with respect to the record surface.

It has been the usual practice for many years to provide a feed screw of fine pitch which will advance the traveling carriage a distance of one one-hundredth of an inch for each revolution of the mandrel. More recently, however, it has been found possible to manufacture a sound record in which the record groove has two hundred turns or threads to the inch, so that it is desirable to provide a phonograph in which the feed of the carriage will be suitable for operating upon a record of this description. In view of the fact, however, that there are already thousands of phonographs in use in which the feed screw advances the carriage one one-hundredth of an inch per mandrel revolution, and a vast number of records are also in use having a pitch of one one-hundredth of an inch, it is desirable to provide means which may readily be applied to such phonographs whereby the carriage may be driven at one-half the speed at which it has been heretofore driven, such means also permitting the feeding of the carriage at its usual speed, so that the phonograph can be used interchangeably with sound records having either one hundred or two hundred threads per inch, and this invention has for its object the provision of interchangeable means of this character which may be readily applied to a phonograph and in which, when so applied, the parts may be readily shifted with respect to each other, so as to drive the carriage at the desired rate of speed.

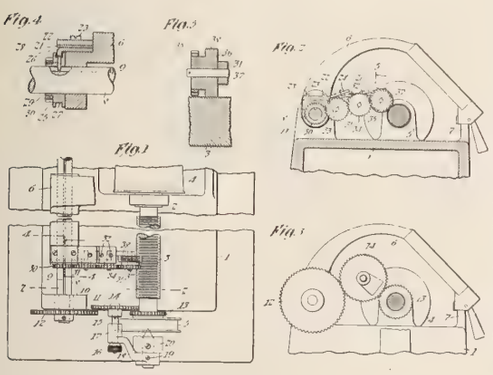

Fig. 4 Fig. 5 Fig. 7 Fig. 1 Fig. 8

Figure 1 is a plan of a portion of a phonograph to which my invention is applied; Fig. 2 is a section on line 2—2, Fig. 1; Fig. 3 is a side elevation of the phonograph, some of the parts being broken away; Fig. 4 is a section on line 4—4 of Fig. 1, and Fig. 5 is a section on line 5—5 of Fig. 2.

RECORD FOR SOUND-REPRODUCING MACHINES. Edgar M. Berliner, Washington, D. C. Patent No. 936,976.

This invention appertains to improvements in record discs and cylinders for sound-reproducing machines, the purpose of the invention being to provide sound records with a plurality of sound grooves and to provide each groove with perceptible means for indicating where the style or needle should be placed to enter a particular sound groove or record track, the means being of such a character that the operator may distinguish, either by sight or by touch, the position where the style or needle is to be placed in order that any one of the several selections on the record may be distinguished and played.

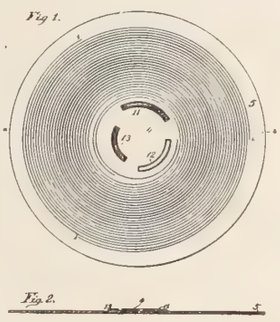

Fig. 1.

Fig. 2.

Prior to this invention it has been proposed to make records having a sound groove which is paralleled by a second sound groove. It is also old in the art to provide a record, having a single selection thereon, with an indented line or mark at the beginning or start of the sound groove, for the purpose of guiding the style or needle of the reproducer into the groove. In carrying the invention into practice, the perceptible means for distinguishing one sound groove or selection from another are differently colored and spaced and they are also positioed either above or below the plan of the sound grooves.

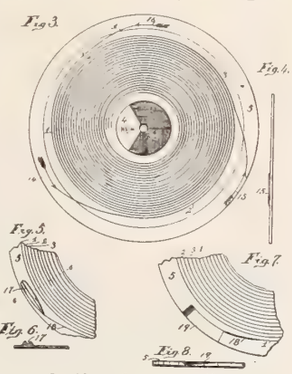

Fig. 3. Fig. 4. Fig. 5. Fig. 6. Fig. 7. Fig. 8.

In the drawings Figure 1 is a plan view of a disc record made in accord with the invention, the perceptible indicating means being within the space occupied by the sound grooves and positioned concentric to the center of the disc. Fig. 2 is a transverse section on the line a—b, of Fig. 1. Fig. 3 is a plan view of another form of my invention, the center of the disc being colored, and with this form of the invention the outer border will have raised indicators formed thereon. Fig. 4 is a side elevation of a part of the disc shown by Fig. 3. Fig. 5 is a fragmentary plan view of a further modification. Fig. 6 is a section on the line 6—6. Fig. 7 is a fragmentary plan view of another modification, and Fig. 8 is a side elevation of the construction shown by Fig. 7.

PHONOGRAPHIC REPRODUCER. Richard Bartholomew Smith, New York, assignor to the Indestructible Phonographic Record Co., Brooklyn, N. Y. Patent No. 936,826.

This invention comprehends a stylus lever balanced upon a pin by aid of a single ball joint, thus reducing friction to a minimum and enabling the lever to be more easily retained in balance. It further contemplates a stirrup which encircles the stylus lever and joint above mentioned, in order to hold the stylus lever in proper working relation to the ball. It still further contemplates means whereby the stylus lever, though encircled by said shoe and fitting the same neatly, turns upon the ball as a center and carries with it, as it turns, the stirrup.

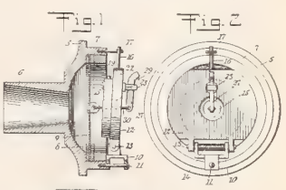

Fig. 1 Fig. 2

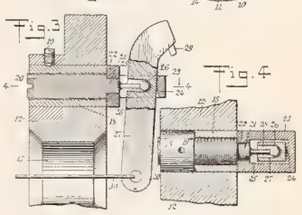

Fig. 3 Fig. 4

Figure 1 is a substantially central vertical section through a phonographic reproducer made in accordance with the invention, this view disclosing a movable weight and a stylus lever pivotally mounted relatively to said weight by aid of the improved ball joint; Fig. 2 is a rear elevation of the reproducer; Fig. 3 is an enlarged fragmentary section through the upper portion of the reproducer, showing the stylus lever and the improved mounting for the same; and Fig. 4 is a fragmentary section substantially upon the line 4—4 of Fig. 3.

GRAPHOPHONE. Thomas H. MacDonald, Bridgeport, Conn., assignor to American Graphophone Co., same place. Patent No. 936,646.

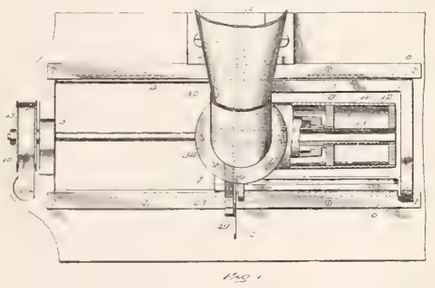

Fig. 1

This invention relates to graphophones, and has for its object to provide a machine with a direct connection from the sound box into the amplifying horn used in such machines, without any loose joints between the sound box and the horn; to provide a rigid horn support, and generally a more compact construction in that form of machine which employs a cylindrical record.

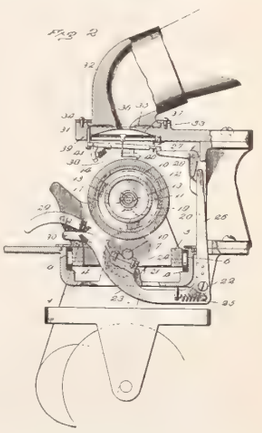

Fig. 2

Figure 1 is a top plan view with parts broken away; Fig. 2 is a cross-section on the line 2—2, Fig. 1; and Fig. 3 is a central longitudinal section.

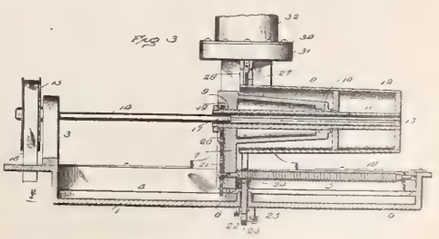

Fig. 3

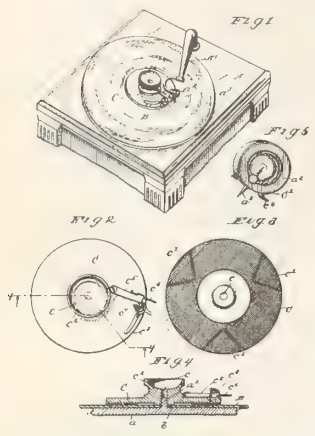
ATTACHMENT FOR PHONOGRAPHS. Louis H. Hays, Cleveland, O. Patent No. 936,534.

This invention relates to talking machines of the disc record type such as the Victor and Columbia, and the object is the provision of an inexpensive attachment to automatically stop the same when the end of the record has been reached.

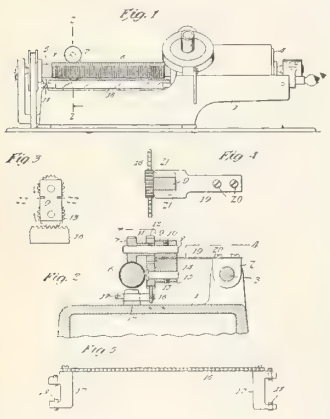
In said annexed drawing: Figure 1 is a broken perspective view of a talking machine of the type in hand, specifically a Victor Victrola, with the improved braking attachment mounted thereon; Fig. 2 is a top plan view of such attachment; Fig. 3 is a bottom plan view of the same; Fig. 4 is a transverse section therethrough on the line 4—4, Fig. 2; and Fig. 5 is a perspective view of a sound box such as is used in machines of the class in hand, together with a clip mounted thereon to co-operate with the braking attachment, as will presently appear.



FEED MECHANISM FOR PHONOGRAPHS AND OTHER MACHINES. Thomas A. Edison, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,267.

This invention relates to means for imparting a progressive movement to the carriage which carries the reproducer or recorder of a phonograph, whereby the same is fed transversely with respect to the direction of movement of the surface of the record, and the stylus traces upon the same a spiral path. In devices of this character it has been the usual practice heretofore to provide a feed screw cut with a very fine thread, such as one hundred threads to the inch, and to secure to the carriage a spring arm provided with a nut for engagement with said screw, thereby feeding the carriage forward a distance of one one-hundredth of an inch for each revolution of the feed screw.

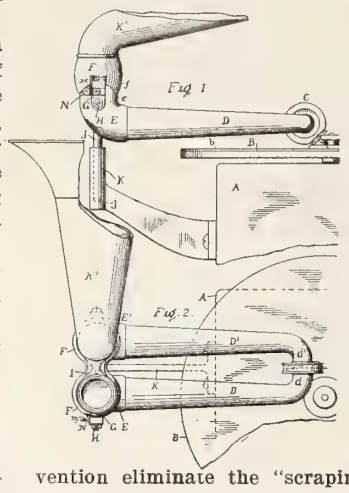
According to the present invention a very low rate of travel may be obtained for the carriage, such, for example, as would be produced by a feed screw having two hundred threads to the inch and operating in the usual way; and, in fact, if desired, this rate of feed may be obtained from a feed screw having less than one hundred threads to the inch. This result is accomplished by substituting for the feed nut referred to a worm gear carried by the carriage in engagement with the feed screw, being pivoted on an axis perpendicular thereto, and providing means which rotates with the worm gear, as, for example, a pinion, and fixed means which co-operates with said rotating means for imparting progressive movement to the carriage; for example, a rack fixed to the body of the instrument with which the pinion meshes.



Referring to the accompanying drawings, Figure 1 is a front elevation of a phonograph provided with a feed device constructed in accordance with the invention; Fig. 2 is a section on line 2—2 of Fig. 1; Fig. 3 is a detail front view of the spur gears which are carried by the traveling carriage and the fixed rack which co-operates therewith; Fig. 4 is a section on line 4—4 of Fig. 2, and Fig. 5 is a plan view of the rack and supporting clamps for securing the same to the phonograph body.

TALKING MACHINE. Robt. L. Gibson, Philadelphia, Pa., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 936,531.

The object of this invention is to provide a construction of sound-reproducing devices so arranged that the air upon each side of the diaphragm of the sound box shall be confined and delivered to independent horns through the media of jointed tubular arms adapted to swing vertically about pivots in the same transverse alinement and to swing horizontally upon a common vertical axis whereby the weight of the horns is removed from the record disc.



The specific objects of such invention eliminate the "scraping" or "grinding" noises of the stylus in the record groove which are apparent in instruments in which the diaphragm is exposed on one side, and secondly to increase the volume of sound given off from a given record disc, and to project said sound in any direction desired, irrespective of the position of the tubular jointed arms and sound box.

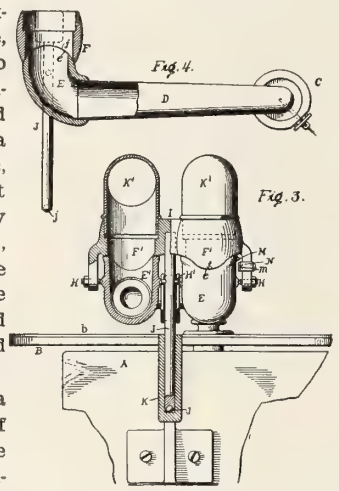


Figure 1 is a side elevation of a talking machine embodying the invention (with portions broken away); Fig. 2 is a plan view of same; Fig. 3 is a rear elevation with part in section; and Fig. 4 is a sectional elevation of the head and hinged tubular arms carrying the sound box.

AUTOMATIC NEEDLE-DISENGAGING AND STOP MECHANISM FOR SOUND-REPRODUCING MACHINES. George A. Oppenheimer, New Rochelle, N. Y., assignor to Louis H. Hays, Cleveland, O. Patent No. 936,348.

This invention relates to attachments for sound-reproducing machines having revoluble horizontal tables upon which are placed the disc records, and the object is to provide a mechanical device which will automatically disengage and lift the reproducer needle or stylus from the face of the record and stop the rotation of the record upon the completion of the reproduction of the matter inscribed upon the record, or at some other predetermined point in the rotation of the said record.

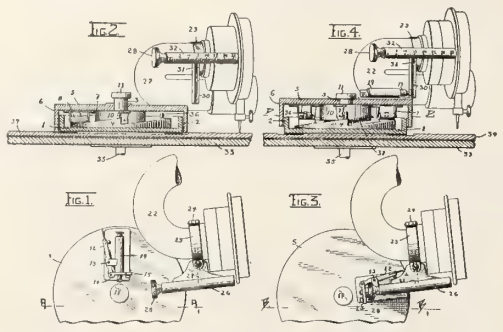

Figure 1 is a plan view of the engaging mechanism in position prior to engaging and lifting the reproducer needle. Fig. 2 is a side elevation of the attachment having a section of the casing removed along the line A A in Fig. 1, and showing a perspective view of the internal mechanism. Fig. 3 shows a plan view of the device in position of engagement with the projecting arm. Fig. 4 is a side elevation of the attachment in position corresponding to Fig. 3, having a section of the casing removed along the line B B, and showing a perspective view of the internal mechanism. Fig. 5 is a section through the line D D in Fig. 4. Fig. 6 is a detailed view in elevation of the bracket and projecting arm. Fig. 7 is a section in elevation through the line C C in Fig. 6. Fig. 8 is a detailed sectional view showing the end of the stop bolt engaging the projecting arm. Fig. 9 shows a detailed view of the stop bolt released. Fig. 10 is a detailed rear

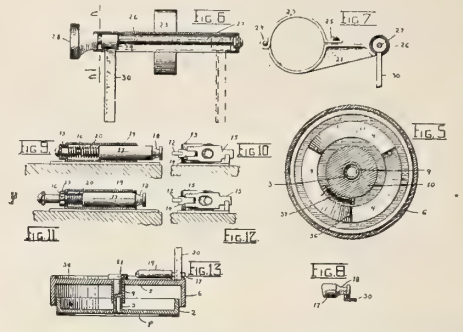
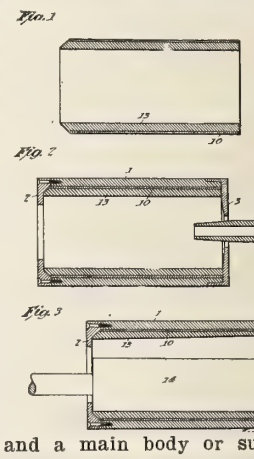


elevation of the part shown in Fig. 9. Fig. 11 shows a detailed view of the stop bolt restrained. Fig. 12 is a rear elevation of the part shown in Fig. 11. Fig. 13 is a sectional elevation through the center of the casing, and shows a modified form of the top portion thereof.

APPARATUS FOR MAKING DUPLICATE PHONOGRAPH RECORDS. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,275.

This invention relates to improved apparatus for the manufacture of duplicate phonograph records being particularly adapted for the production of an improved record which will be claimed in another application but which may be employed for the manufacture of records of other types. The improved record referred to is a composite cylindrical structure, having an outer layer of a tough, smooth, amorphous material, in which the record surface is formed and from which a smooth and brilliant reproduction can be obtained, and a main body or support therefor composed of a very cheap and tough material unsuitable itself for receiving a record surface, the two layers being welded together so as to constitute practically a single homogeneous structure.



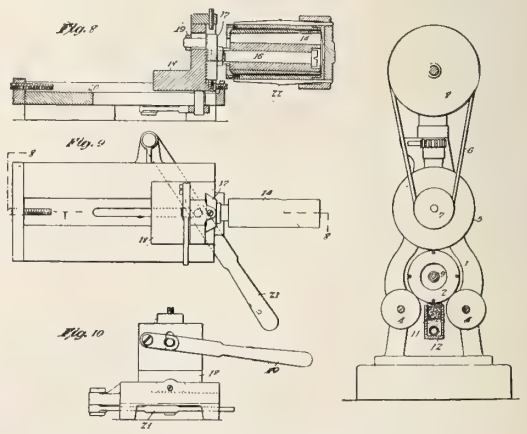


Figure 1 is a longitudinal sectional view of the improved duplicate phonograph record; Fig. 2, a similar view of the rotating mold, showing the formation of the record thereon; Fig. 3, a similar view illustrating the operation of tapering the bore of the record when desired, while still in a plastic condition within the mold; Fig. 4, a similar view illustrating the operation of forming the record on its bore with a series of concentric ribs; Fig. 5, a similar view, showing the reaming of the record, while cold, to taper its bore; Fig. 6, a section on the line 6—6 of Fig.

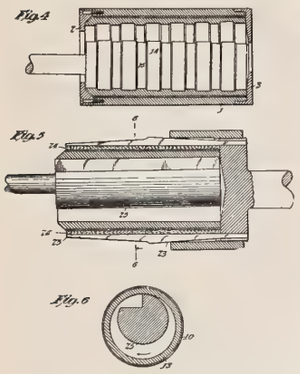
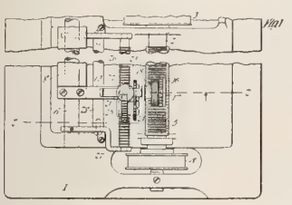


5; Fig. 7, an end view partly in section, showing convenient apparatus for rotating and cooling the mold; Fig. 8, a longitudinal sectional view of the apparatus used for finishing the bore of the record, while in a more or less plastic state within the mold, the section being taken on the line 8—8 of Fig. 9; Fig. 9, a plan view of the same with the mold and record removed, and Fig. 10, an end view.

FEED MECHANISM FOR PHONOGRAPHS. John F. Ott, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,270.

My invention relates particularly to means whereby the phonograph carriage may be fed with respect to the record or blank at two distinct rates of movement, corresponding preferably to one hundred threads per inch and two hundred threads per inch, respectively, and now designed for use with phonographs of the Home type.

The improved mechanism is of the type disclosed in application of Herman Wolke, filed September 12, 1907, Serial No. 392,480, wherein the faster movement of the carriage is effected by the direct feeding of a worm locked against rotation and engaged by a feed screw, so that the worm acts practically as a nut; while the slower movement is secured by a differential action, the worm being rotated by the feed screw, and effecting longitudinal movement with respect to a stationary abutment.



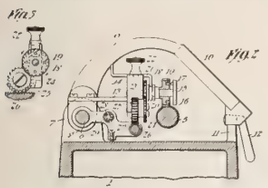


Figure 1 is a plan view of a portion of a Home phonograph, embodying the present improvements in their preferred form; Fig. 2, a cross-sectional view on the line 2—2 of Fig. 1; and Fig. 3, a front view of the worm and differential gearing.

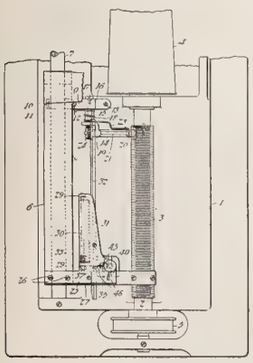
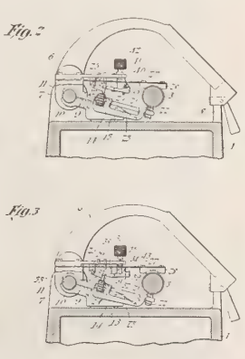
PHONOGRAPH. Herman Wolke, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,268.

This invention relates to phonographs of the type in which a progressive movement is imparted to the sound box carriage by means of a rotating feed screw, the carriage moving transversely to the direction of movement of the record surface so that the stylus of the recorder or reproducer will trace a spiral path on the record.



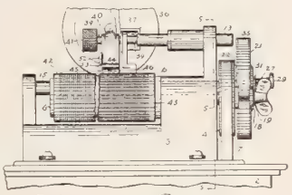


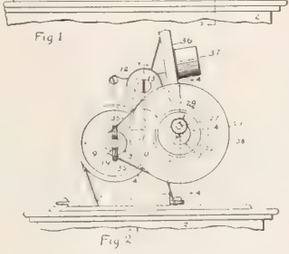
The object of the invention is the production of improved means whereby the carriage may be advanced by the feed screw at each revolution a distance equal to the pitch of the feed screw, as has hitherto been the usual practice, or whereby, at the will of the user, the carriage may be advanced at each revolution of the feed screw a distance bearing any desired ratio to the pitch of the feed screw. By these means a single instrument may be used for the recording or reproduction of records, the record grooves whereof have different pitches, as for example, the same instrument may be used for records having either one hundred or two hundred threads per inch.

Figure 1 is a plan view of a portion of a phonograph to which the invention is applied; Fig. 2 is a side view of the same, partly in section, showing the parts in position for feeding the carriage directly from the feed screw at a rate equal to the pitch thereof, and Fig. 3 is a similar view showing the parts arranged for feeding the carriage at a different rate, as when operating upon records having two hundred threads per inch.

SPEED-CHANGING MECHANISM FOR GRAPHOPHONES. Frederick F. Murdock, Syracuse, N. Y. Patent No. 937,459.

This invention relates to improvements in speed-changing mechanism for graphophones, and has for its object to provide an additional attachment or mechanism, by means of which both the old and the new machines may be readily adapted to play what is commonly called the standard two-minute record, and also a new four-minute record which has but recently been placed on the market.



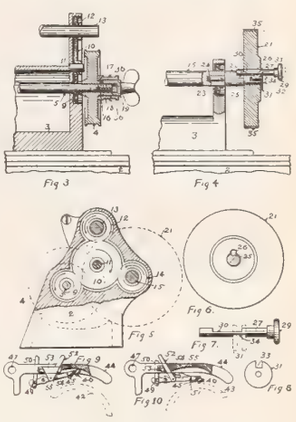


The present invention consists of a reduction gearing comprising a large and a small pulley, which are operatively connected by a belt, the smaller pulley being mounted on the old record driving pulley; the larger pulley being mounted upon the shaft which carries the sound box and other reproducing parts.

The invention further consists of a simple clutch mechanism and co-operating parts, by means of which the machine may be adjusted and set in a ready manner for playing either the long or short records without requiring any alteration of the machine.

The invention further consists of adjustably arranging two reproducing needles, one coarse and the other fine, by means of which either of the said records may be played without requiring the removal or replacing of the needles or any of the reproducing parts.

Figure 1 is a side elevation of a graphophone, showing the disposition and arrangement of the principal parts of the improvement; also showing portions of the old and the new records. Fig. 2 is a front end elevation of the machine. Fig. 3 is a sectional view substantially on line 3—3 of Fig. 2. Fig. 4 is a sectional view substantially on line 4—4 of Fig. 2. Fig. 5 is a sectional view substantially on line 5—5 of Fig. 1. Fig. 6 is a detail view of the large auxiliary pulley. Fig. 7 is an enlarged view of the clutch key. Fig. 8 is an enlarged detail view of the plate which holds the large pulley in place and also co-operates with the clutch key. Fig. 9 is an enlarged detail view of the needle support, showing the coarse and fine needles pivotally connected, and disposed in rest position. Fig. 10 is a similar view, showing the fine needle in engagement with the new record, the same being shifted and held in such position by the reversing of the operating lever.



NOTICE OF CREDITORS' MEETING.

Joseph Mellors, referee in bankruptcy, has sent out a notice in the matter of the Hawthorne & Sheble Mfg. Co., bankrupts, that a meeting of the creditors will be held at his office, 528 Walnut street, Philadelphia, on Monday, November 15th, at 10 a. m., for the purpose of considering the petition of a trustee for leave to sell a portion of the personal property of this estate at private sale, as well as to consider such other business as may come before the meeting.

THE SUCCESSFUL SALESMAN.

Some Pertinent Characteristics Woven in the Fabric of His Makeup.

When you see the successful salesman, be he store or road man, you are immediately impressed with one fact. He is aggressive, above all other qualities.

He is justifiably proud of the fact that it is a hard matter to turn him down. His arguments are concentrated around one object—what he is selling. He talks about the weather after he has the order in his book. He sizes up his prospect with a sharp, penetrating, unobservable glance, and knows about just what selling points will interest him. If he is in doubt he takes a chance and promulgates them in their entirety, and generally wins out.

He is at all times sane in his aggressiveness. You never see him foolishly reiterating a "stock" statement. When he finds repetition necessary he is not afraid to take a plunge and literally roll up his sleeves to prove that he is right.

This comes from confidence in what he is taking orders for; enthusiasm in his proposition, and a lot of clear grit behind it all.

He belongs to that class of men who are making good all over the world in every profession. Scorning the shallow-brained, insincere traveling "tourist" and shirking chair warmers, he gets up at 5 a. m., and plows through virgin territory opening up new accounts. He's the sort of man who ousts his competitors by sheer convincing personality, and ships an entire line of goods to the dealer who has used the other fellows' for the past twenty years.

You don't see his kind approaching the office with bleary eyes trying to scratch his head three or four inches outside his hat brim. He don't believe in having a "big" head because he realized long ago what his job meant to him. He had to drop one, and it wasn't his job.

In the words of the traditional prophet

"Go thou and do likewise."

THE ANGELUS A MONEY MAKER.

Talking Machine Dealers Will Find This Famous Player and Player-Piano a Proposition Worth Considering—Has Plenty of Prestige Back of It.

The Wilcox & White Co., manufacturers of the Angelus player-piano, Meriden, Conn., have long enjoyed the confidence of the trade and have been noted for their progressiveness and the reliability of their products. They have always been leaders in the player field, and they make a line of instruments which appeal to the purchasing public.

Talking machine dealers will find the Angelus a very interesting proposition to consider. In almost every small city there is outside of the home an increasing demand for music—in ice cream parlors, skating rinks, dancing schools, in fact, wherever music, whether classical or popular, is desired. The Angelus piano fills the bill admirably, and dealers should be able to work up an excellent trade with it in their locality. We would suggest writing the manufacturers at the earliest possible moment and look carefully into this proposition. It will be found a highly profitable one and well worth consideration.

TRADE ON BROAD PRINCIPLES.

Experienced Merchants as Well as Talking Machine Men Have Found That This Policy Is a Wise One to Cultivate—Some Comments Along This Line.

Smile in your mirror and it smiles back at you; look pleasantly at the world and it reflects your good-natured looks; cultivate a warm feeling toward all men and they radiate and give back the warmth. Deal justly. Trade on broad principles. Be not too jealous of your rights. The world—mankind—soon discovers where it is well treated and trades there.

The intense personal devotion that some men show toward the concerns by which they are employed is illustrated by the remark of a clerk who declared with the greatest emphasis:

"I have been in the service of my house for eleven years, and not once in that time—no, not once—have I missed a pay day!"

A clerk is not necessarily a salesman, but is in a position where he may easily become one. A clerk's salary is based on the work done by his hands. A salesman's salary is the same as the clerk's plus another salary for the work of his mind.

The "price" of what you sell is what you ought to get. Price is what you're entitled to; price is always right. If you fail to get that much then it's you that's wrong—not price.

There is just a little difference between firmness and obstinacy. When it's you, it's firmness; when it's the other fellow, it's obstinacy.

There is nothing else which will fix a floating life and prevent it from being tossed hither and thither like forming a habit of prompt decision.

No matter how small your window, no matter how small your stock, you cannot afford to put in an indifferent display.

A discourteous clerk should remain in your employ only long enough to write out his pay check.

All things worth having are nailed down nowadays. If you want to see anything turn up, you have got to use a crowbar.

When you strike a dead town don't knock it. Think of the advantages you have over the residents—you can leave it.

A clerk is seldom advanced without having given his employer some reason to advance him.

The early bird catches the worm; but what good that does the worm has never been clearly explained.

Yours may be just one in a hundred advertisements in to-morrow's paper—then make it stand out.

Lose no time—be always employed in something useful; avoid all unnecessary actions.

It is not enough to be industrious; so are the ants. What are you industrious about?

Be a man with ideas—an information bureau—and keep your information always on tap.

The impression created through good window displays are of a lasting quality.

SOME IRISH ADVERTISING

Done in the Pure Yankee Spirit by T. Edens Osborne, the Belfast Talking Machine Man.

The following notice appearing in the reading columns of a Belfast, Ireland, newspaper is an excellent example of the kind of live advertising which brings business to T. Edens Osborne, the well-known dealer of that city. The matter has a decidedly Yankee freshness as has all Mr. Osborne's publicity schemes:

"MUSICAL 'AT HOMES.'

"INTERESTING INNOVATION.—Evidently the Piano is being gradually superseded by the Gramophone, for when records such as those of Madame Clara Butt—which have just been issued by the Gramophone Co.—arrive at 4 Donegall Square West, Belfast, they are purchased freely by ladies who own Gramophones, and who desire to introduce 'pleasant surprises' on their 'At Home' evenings. Of course the records are bought from Mr. T. Edens Osborne, who holds by far the largest stock in Ulster, including Caruso's, Melba's, Patti's, Tetrazzini's, Verlet's, etc., etc."

EDISON BREAKS A RULE.

Inventor Takes a Few Hours Off to Entertain Jap Commission.

Thomas A. Edison, the inventor, one day last week broke a custom which he has maintained for many years by spending a few hours of the day out of his laboratories, when he personally conducted the members of the Japanese Commercial Commission through his phonograph, storage battery and electrical works in West Orange, N. J.

Afterward Mr. Edison entertained the investigators socially. They were particularly impressed with the laboratory and kept the inventor busy answering their volleys of questions and he talked more than he ordinarily does in weeks.

SOME LOGICAL CONCLUSIONS.

Show me the business man who gives no thoughts to his business, who neglects his trade or technical journal, and remains in ignorance of the important things going on in his line, and I'll show you a man who trusts somebody to do these things for him, or who will have some vain regrets when he wakes up.

Wright & Ditson, the well-known sporting goods house of Boston, Mass., have leased the entire building at 22 Warren street, this city, and will move their local branch to that location.

Popular priced watches are proving big sellers with side line specialists.

SIDE LINES HELP A BUSINESS.

An Opinion of Importance from a Talking Machine Man Who Has Gone Into This Matter Very Thoroughly—Finds Side Lines a Profitable Adjunct to His Business.

Talking recently with a talking machine man who has made a great success of side lines as an adjunct to his business, he said: "I believe that talking machine dealers will find a suitable and productive side line an excellent feature of their business. And admitting the need of a side line the question has always been presented, and never quite satisfactorily answered, as to what constitutes a suitable and productive side line—suitable as to combination, and productive enough to warrant the expenditure of time and money to permit its prosecution in connection with the main line, the talking machine business.

"Mature reflection has led me to the conclusion that sporting goods furnish the very best side line for several potent reasons. Such goods appeal to the same vast and varied class to which the talking machine business appeals—to the class which desires amusement, must have it, and is always willing to pay the price. The sporting goods line, moreover, is clean, compact, easily handled, with limited manufacturing competition; and it affords a good margin of profit to the retailer—a very important consideration in these days of close prices.

"I have also found small musical instruments such as the Hohner specialties, particularly harmonicas, to be excellent sellers. They are always attractively displayed and can be carried with a small expenditure of money, and always pay good profits. The same may be said of safety razors and watches. The manufacturers have arranged them so attractively that dealers have little to do to bring them to the attention of the public—in fact, they sell themselves. I am very pleased with my venture in the side line field, and find that it is stimulating to my regular talking machine business. It has brought in lots of new customers and broadened out the business materially."

THE VALUE OF GETTING TOGETHER.

Some Pointers on How It Pays for Employers to Get Into Close Touch with the Men Under Them—The Philosophy of Success.

An excellent sermonette in the form of a little folder, entitled "Getting Together," has been issued by E. C. Atkins & Co., of Indianapolis, as one of a series of "Talks to Retail Clerks." It is so "meaty" in the way of good things for the men who conduct talking-machine stores and for the men who sell these popular creations, that we print it herewith:

"Do you know that I think that the greatest pity in most business establishments is the imaginary big high stone wall that has been builded, dividing the 'head of the house' from the poor unfortunates who happen to be on their weary way towards the top of the ladder.

"Of course, this don't hit you, for I know there is the closest affiliation between your different departments and so I suppose this talk will not interest you.

"But for fear it may, for fear you are going to read and listen, and with the possibility that you, the head, and your salesman (the body of your business) may discover some truths in the necessity of getting better acquainted with each other, I am going to talk to you about 'Gittin'' together.

"I actually heard the head of a business say the other day that he thought he had the best, the most loyal bunch of boys in his sales department that could be found.

"Now, what do you think of that?

"That fellow was a big success.

"He said he made it his business to get in touch with his help, to study them, to learn their good points and their weaknesses, to bolster them up, as it were—to be one of them. And he had done all this without losing their respect either. In fact, I learned that these fellows regarded this marvel as the finest thing that ever happened.

"They told me their boss was a peach and that it was an actual pleasure to work with him, because they knew that their efforts would be appreciated. He spoke to them just like they were mortals, with souls and feelings, and when they made a good sale he told them that he appreciated it, and when they fell down he tried to show them how to do better the next time. They were not one bit afraid of him. They respected him and wanted to see him succeed and were only too glad of the opportunity of helping him to do so. I believe that this sort of an organization will win out under almost any condition. And I think I'm right about it.

"Here is an idea for you, Mr. Boss. Maybe, if you take this home with you and 'home to you,' that to-morrow morning you will feel like looking over on the other side of the fence, to the salesman's side, and see what you can do to make him more efficient.

"Let's look over on the salesman's side together. How can he help the boss? I believe every institution of any size has what I call, for lack of a better word, a 'groucherino.' That is, not just a common everyday grouch, but a groucherino — a double-distilled, back-action grouch. One who grumbles and kicks and fumes and tears his hair. He goes about among his associates and calls them to one side and tells them confidentially that everything is wrong. You know him—don't you? Well, cut him out. Don't let him inoculate you with the germs of discord. Pass him up. You can't cure him—he is hopeless, and harmless if you make him so.

"Then the salesman ought to be merciful to his boss. He don't know one-half what he has to contend with. He has no idea of the serious problems constantly confronting the head of the business. He cannot conceive the reasons for doing this that way, or of doing that this way. Because he does not know the real condition. For Heaven's sake don't kick and knock and criticize and make yourself ridiculous by telling how you would do it. You don't know whether you would or not, because you dont know the real conditions. Say to yourself, My Boss knows why, perhaps I would do the same thing if I knew, too, and then turn in and give him that loyal support that you would have him lend to you, were conditions reversed.

"The other boys in your department may not be as congenial as you would wish. They have their faults and weaknesses, just as you have yours. But they are your business associates and they are making good or they would not hold their jobs.

"Be philosophical, look upon their best side. They all have their good points. Find these things about them and overlook their weaknesses.

"Be broadminded, perhaps you yourself may have just as glaring defects as they. Get together—warm up to each other and work for the common good. It's the old case of the bundle of sticks after all.

"Get together, you bosses, if your boys are no good, fire them, there are thousands of others. If they are trying to do the right thing, encourage them—that's all. They have feelings just the same as you.

"Get together, you salesmen, your boss isn't half as bad a fellow as he might be. He is carrying a big load and doing his best to carry it intelligently and with patience. Have mercy on him and help him. He needs you.

"If you can't do this, then quit. There are other jobs where perhaps you may be permitted to dictate the policies of the concern without knowing any of the true conditions.

"Now, I have not said a word about salesmanship, but have talked rather of the foundation which will make intelligent salesmanship possible. I do want to say to you again, however—Sell quality merchandise. Show the other kind if you have to, but sell the quality goods."

MORE DEMAND FOR POST CARDS.

Some Dealers Caught Napping by New Tariff Law, Which Has Increased Prices Up to 345 Per Cent.—Foreign Views Supply Decreases.

The approach of the holidays finds the demand for illustrated post cards showing a pleasing tendency to grow in proportion to the supply. It would be more correct, perhaps, to say that the supply has decreased somewhat, and as the demand has increased the ratio is more nearly even than it has been for six months or more.

The heavy accumulation of all kinds of cards which had developed early in the summer, and which was especially noticeable in September, has been materially reduced. There is actually a shortage in some lines, as was indicated in last month's issue of The Talking Machine World. Failure to prepare for the effect of the new tariff law was responsible for this state of affairs.

Although some dealers, especially the importers, complain of a shortage, it must not be supposed, however, that there is any actual lack of supply. Some firms fear they have not a sufficient amount of cards on hand for their needs, but they all have some sort of a supply. It is true, none the less, that a number of houses will be unable to fill all their orders.

The principal pinch will come in foreign view cards. On some of these, as is widely known, the new tariff has increased prices by amounts running as high as 345 per cent. An expert in this line said, a few days ago, that the wiser dealers bought heavily of this class of foreign cards before the new tariff law went into effect last summer.

The authority said, further, that the conditions which then seemed to reflect a grievous oversupply no longer exist, and that those dealers who did not seize time by the forelock will lose chances to get business and profit out of the field for foreign view cards.

GILLETTE CO.'S EXPANDING TRADE.

Based on Values the Safety Razors Made by This Company Have Won a Tremendous Popularity Throughout the Civilized World.

There is no one specialty made in America perhaps that has grown so rapidly in popular favor as the safety razor made by the Gillette Co., whose advertisement appears elsewhere in this issue. Thousands of people are now using safety razors who could not be induced to do so a short time ago. When a man shaves himself he uses his own razor, brush, soap, towels, etc., guarantees against skin diseases. As a time saver the safety razor deserves a place in the halls of fame. As a money saver the facts are: It will cost a man about $15 a year if he shaves twice a week in a barber shop. The loss of time must be figured in the equivalent of money. The one proposition to put before the men of this and other countries is that the modern safety razor is within the reach of every man and will give the same results at home as can be attained by a skilled barber and at much lower cost.

The Gillette is one of the best selling Specialties you can have in your store. It is especially good at Holiday time. Now is the time to stock for your Holiday trade. The Gillette display will create interest—sales—profits—just as soon as you get it on your counter—but not a minute sooner.

Every Christmas buyer who comes into your store is a possible Gillette purchaser. Women are looking for just such articles as gifts for their men folks. Men want the Gillette for themselves, and to give it to their friends.

Few other displays will give you as many sales for the space they take as your showing of Gillette Safety Razors.

Gillette Safety Razor, standard set, $5.00.

Pocket Edition, cases in gold, silver, or gun metal, with razor and blade box to match, retail complete from $5.00 to $7.50.

Gillette Combination Sets—from simple ones containing razor, soap and brush at $6.50 up to elaborate sets with everything the most fastidious shaver could desire at $50.00. Especially sought for gift purposes.

PROFITS IN SLOT MACHINES.

Where These Specialties Are Placed in Advantageous Positions They Bring an Excellent Income to the Talking Machine Dealer and Others Interested.

A dealer, especially in a medium-sized town, with a sum of money to invest will do well to investigate the possibilities for placing a number of slot machines in various prominent places, on a commission basis. There are card-printing, fortune-telling, weighing, strength-testing, and a host of other machines of similar character, as well as coin-operated machines for vending everything, from candy, chewing gum and hot peanuts to towels, soap and other necessities, at from a cent to a dime.

Many manufacturers of coin-operated machines send them out practically free, or sell them at actual cost with the understanding that the lessee or purchaser buy all the goods needed for keeping them replenished direct from said manufacturers.

Machines are easily placed in attractive positions on commission, which may often be as high as 20 per cent. of the gross intake, railroad stations, cafes, trolley waiting rooms, lunch rooms and other frequented spots being naturally considered the best locations. As a rule, the machines do not receive rough treatment and rarely need any attention except replenishing stock and an occasional oiling of the working parts.

So valuable are slot-machine privileges considered that even the great New York Central Railroad retains the privilege themselves, own the machines and have the amounts received go through the office of the auditor of passenger accounts for checking. The privilege in the New York subway and elevated roads is leased for an amount hard to realize, and yet the lessees are said to be simply "coining money," after paying salaries to a large force of men spending all their time in keeping the machines full of candies and chocolates and collecting the pennies.

It is a field well worth considering by any talking machine dealer, whether he has his store filled with talking machines and side lines or not. It is a departure that would require very little attention except from a clerk or collector. The number of articles disposed of by a vending machine are easily checked. The machines are filled when put out, and when the collector makes his rounds he is supplied with a certain number of packages. For each package he places in the machines he returns a coin to headquarters, and dishonesty is practically impossible. Weighing and similar machines are usually supplied with a register as a means of checking the intake.

With the proper kind of machines in a well-chosen locality, profits are sure and large, and the large incomes claimed will seldom prove overestimated.

GERMAN FACTORIES HERE

May Result from New Tariff on Kali and Postcards.

William Forthman and Herman Schudderkopf, directors of the German Kali Works, arrived last week by the Hamburg-American liner Amerika to look into the project of establishing factories in America because the new tariff schedule will prevent them from exporting kali from Germany to this country. Joseph Keller, of the picture postcard manufacturing firm of Stengel & Co. in Dresden, was also a passenger by the Amerika. He said the new American tariff would shut out German-made postcards and that he was here to start a factory and sell the cards directly to the American people.

LATEST CUSTOMS RULINGS.

Postcards Sprayed by a Mechanical Process Pay Higher Rate of Duty.

It was decided recently by the Board of United States General Appraisers that postcards sprayed by a mechanical process are dutiable at the rate of 35 per cent. under the provision in the Dingley tariff for manufactures of paper.

According to the importers, the Kemper-Thomas Co., the goods should be allowed to enter at 25 per cent. as being "lithographic prints" with a tax of only 25 per cent. ad valorem. General Appraiser Fischer, who writes the decision for the board, says that as the cards are sprayed and are embossed, it is evident that they fall within the provision for manufactures of paper. The Collector's decision is accordingly affirmed.

THE GOSPEL OF CHEERFULNESS.

A Mighty Good Gospel for the Business Man to Study.

Hit up the old prosperity trail. Hope is the mother of courage. The man who dares is the one who expects to succeed. He scans the face of to-morrow and sees encouragement. He discounts her smile and coins it into capital. He uses the future as the basis of his work to-day, and yet he builds also on yesterday. The mistakes he made, then, are the signal bells of alarm telling him of what he must beware. Curb your temper; yesterday you lost a sale because of it. Take a venture in a new line; you declined one yesterday, and the fellow across the street has taken it on. Encourage your help; a good salesman left you yesterday because he thought you did not appreciate him. Push your collections; you should have got your money of Blank yesterday, and to-day he failed. The successful man looks back and sees his pathway strewn with mistakes, and yet he has prospered in spite of them—perhaps because of them—else he would not be where he is to-day. The man who has never made a mistake is the one who has never done anything.

MOVING-PICTURE MACHINES.

Popularity of Kinetoscope Shows in Western Canada.

(Special to The Talking Machine World.)

Washington, D. C., Nov. 1, 1909.

The success which has attended the experiment of moving picture-shows in western Canada, inaugurated last year, indicates to Consul-General John Edward Jones, of Winnipeg, the large market in the cities of the northwest for this form of amusement. Mr. Jones adds:

It would be profitable for the manufacturers of moving-picture machines to send a representative through western Canada to exploit the field. In Winnipeg this form of amusement only became popular during the past year, and the promotors are now reaping a fine business as the result of their enterprise.

The people soon acquire a fondness for this form of amusement, and willingly pay 10 cents for admission. In this new country, where all forms of amusement are scarce, moving pictures are welcomed, and there is no reason why the manufacturers of the United States should not control the business.

$1,500,000 FOR INVENTION.

Amateurs Sell for a Fortune Their Discovery for Printing Photos.

While experimenting with amateur photography, M. A. Yetnick and Dr. L. M. Early, of Columbus, O., discovered a way of making a new kind of photographic printing paper, and a deal was closed at South Bend, Ind., by which the Eastman Kodak Co. of Rochester will pay them $1,500,000 for the secret.

The Eastman Co. could not duplicate the paper patented by the Columbus men. It promises to revolutionize the printing of photographs.

MAKING WORK WORTH WHILE.

No great thing—no pleasure-giving thing—has ever been created without an enthusiastic love behind it.

The joy of the man who does a worthy work well is the keenest joy in the world.

The books, the poems, the pictures that have moved the world to tears and laughter, to thought and action, have come from hearts overflowing—have first, and more intently, thrilled the creator.

He only fails who derives no joy from his labor—gives no joy by his labor.

Love of our work alone makes it worth while—to ourselves and others.—Glenwood S. Buck.

SUCCESS.

Success is the hand trained to do its work,
The eye that sees that the lines run true,
The ear that hears when the truth you shirk,
The brain that conceives old truth anew.

Success is the strife with the heart aglow,
The effort we make for our fellow-man,
The pride that laughs at the outer show,
The soul that fulfils its highest plan.

—E. H. Ellsworth.

MOVING PICTURES IN SCIENCE.

Surgery, Agriculture, and Metallurgy Taught by Them Now and Greater Possibilities Will Yet be Unfolded.

Moving pictures are now, or within the near future will be, applied to the teaching of botany, metallurgy, biology, the science of agriculture, and surgery, and thus do away with the necessity of vivisection for teaching purposes. This plan was announced recently by John Collier, general secretary for the National Board of Moving Picture Censors, at one of the regular after-service Socialistic discussions of the Church of the Ascension, Tenth street and Fifth avenue.

After the Rev. Alexander Irvine had besought the several hundred Socialists gathered to deal gently with the unfortunate wealthy, and had declared that Socialism was narrow, bigoted and intolerant, only a little bit less so than Christianity, the after-service talk was devoted to the moving picture drama.

In discussing the immediate future for motion pictures, Mr. Collier said that the greatest surprise for the general public would be the application of moving pictures to educational problems. Films had now been prepared to illustrate different processes taught in botany, which it had never been possible to see before in a process of growth. The same was true of biology, where, by use of the microscope and the moving picture machines, the entire history of cellular life could be thrown on the screen before the students. It was now possible to introduce the moving picture as an educational appliance to the study of medicine, which would result in lessening greatly the amount of vivisection practised in undergraduate work.

With the present scheme the vivisections used in all medical colleges would have to be performed but once. Any number of films needed could be prepared from the one set taken, so that a single vivisection for one particular object would illustrate that subject for all the medical schools. This would greatly decrease the number of animals killed, while it would entirely do away with the danger of a vivisection being made by an unskilled person.

Films have been made for use in the Wisconsin agricultural colleges, showing in parallel pictures the difference between scientific and unprogressive farming, in process and in result, said Mr. Collier. This graphic presentation of the properly prepared field giving an abundant yield side by side with the unimproved one with a scanty crop, is proving a most effective means of instruction for the Wisconsin farmers.

The same method will be used for various branches of farming and dairying, in which reform is being urged. An interesting possibility, he said, is the use of this demonstration out in India, to make known the improved methods of farming in the famine districts. It is asserted that systematized agriculture would do a great deal toward preventing the Indian famines.

As for the moving picture as drama, Mr. Collier declared that it would draw away two-thirds of the public at the standard theaters and nine-tenths of that of the burlesque houses. The motion plays, said the speaker, were within the means of the ordinary family, while the prices of the Broadway theaters were prohibitive for the common run of people. The one chance for the theaters, he said was to make use of the moving pictures to give the setting instead of scenery. This, Mr. Collier declared, had been tried with great success at the Opera Comique, resulting in an immense saving in the cost of production. The backgrounds were made in color, he said, and gave more beautiful scenic effects than painted canvas.

If the regulation theaters adopted some such plan, Mr. Collier suggested, the cost of production would be so greatly reduced that prices would again go down to the level where the great mass of people could once more afford to buy theater tickets. In the opinion of the speaker, the average Broadway drama has become "contemptible and unrepresentative," because it now relies largely on the traveling public, "desultory idle, and only seeking diversion," instead of reflecting the taste and thought of the bulk of the American people. Compared with the "disreputable and pitiful average" of the Broadway productions the once despised moving picture was "positively angelic."

When the heckling began, a woman arose and wanted to know why a humanitarian censor board of moving pictures had ever allowed a play entitled "Poor Pussy," and evidently designed to be humorous, to have been produced. It was discovered, however, that "Poor Pussy" was perpetrated before the board took up its blue pencil, so the lady felt reassured.

GRASPING RIGHT OPPORTUNITIES.

Opportunities Exist in Great Numbers, but Choosing the Right One Depends Upon Individual Judgment—Hasty Decision Should be Avoided.

Opportunities exist on every hand and we are continually grasping them. Whether or not we grasp the right ones is a matter of excellence of judgment. There are only two paths to travel. One leads to success. The other leads to failure. Every little while we come to little bypaths which are short cuts. Some of them bring us out upon the path of success. Others carry us backward toward failure. Those achieve success who choose helps to success. To a young man the question comes: "Shall I go out with the boys to-night and develop more skill on the pool or billiard table, or shall I stay at home and study this book which will increase my mental power, visit this successful man whose talk will inspire me, go out for a row or a tramp, or to a gymnasium for exercise which will develop more physical power?" Upon his answer depends his advance toward greater success. Possibly he chooses the good time with the boys in the poolroom and does it because he honestly thinks that is the best thing to do.

But he is rendering a judgment upon insufficient information. He does not see that either of the other courses would YIELD GREATER SUCCESS RETURNS. He says, "My nature demands pleasure of this kind. It helps me far more than the pleasure you would choose for me." Probably it does. If he is honest he can find out what has been the experience of those who solved that problem in the past. If the majority of those who frequented the poolroom succeeded and the majority of those who studied to become more efficient failed, then his judgment that the poolroom is best is correct. He proudly says, "I have done nothing that I am ashamed of." That is being negatively good. But why is it that he does not say, "I am proud of the success I have achieved through doing this thing?" Is he sure that he has chosen the better part? Have men more confidence in him because of his choice? Is his promotion apt to be as fast when following the path he has chosen as it would be were he to follow some other? You can see that it is but a matter of judgment—of choice.

In marking out a life policy it is not so hard to choose. Men have done that in the past, says Thomas Dreier in The Iron Age. By following a certain policy certain men succeeded. Those who did not follow that policy failed, or at least did not achieve CONSPICUOUS SUCCESS. The only question then is: "Is it worth while to achieve a success similar to those who have served greatly, or is it wiser for me to follow the route of those whose lives merely illustrate the result of following cheaper pleasures that possessed a greater momentary glitter?" Every man must, indeed, live his own life, and it is true that each must have his own choice. What is yours? Can you PROVE that yours is best?

A creditors' petition in bankruptcy has been filed against the Consolidated Film Co., dealer in moving pictures at 143 East Twenty-third street, which has not been active in business for several months.

GET OUT OF THE RUT!

There are many men in special lines of trade who do not realize the many paying opportunities which are afforded them in handling lines of merchandise which blend harmoniously with that which they are selling.

Take for instance piano players.

Now there is nothing which will come into the life of the talking machine business that will compare in selling strength with piano players.

They will help the dealer to increase his profits without increasing his overhead expenses.

Now which player?

That's the question.

And it's easy to answer.

THE ANGELUS by all means.

It's the original piano player and has kept its position right to the front through all the years.

All the details incident to the Angelus agency can be easily explained and we can tell you—show you—the way to secure more business, but better still, paying business.

A word to the wise is sufficient.

WHICH IS BETTER?

Restricted Prices or an Open Market—What a Hardware Authority Has to Say Upon the Subject.

Which is the better for the retailer, a restricted price or an open market?

Have retailers, as a class, reaped their proportion of prosperity for the past few years?

Is it all the retailer's fault? If not, are we not justified in suspecting that there may be something wrong?

In these restricted prices due regard is not always given to the profits of the retailer, and no restricted price can be made satisfactory until manufacturers make a delivered price the same at every point in the territory where his goods are sold.

Many people are misled by words, and the word "cheap" is a great sinner in this respect. One of the dictionary definitions of "cheap" is, being of comparatively little value, hence poor." This seems to define the character of a large portion of the goods priced as cheap by the price bulletins which you and I have been receiving lately, on account of the good rating we people have in Chicago, says a writer in Hardware Magazine. There are, however, quite a few goods priced by these people, for which we hardware merchants are compelled to pay too much.

We have always advocated and believe in the advantage and desirability of the hardware jobber as a source of supply. But this jobber has no legitimate claim upon our patronage that is not based upon service, price and quality. It is his duty and mission to place us in a position to sell the consumer, meeting all competition.

We are convinced that this is not being generaly done. Complaints come to us frequently that some of the special brand goods are not worth the money. Occasionally an article not carried in stock, shipped direct from the factory, is billed by the jobber outrageously high. Some household items every day used are quoted to us higher than our customers can purchase direct. The careless retail buyer is often charged the limit, and frequently doses of this character breed trouble.

Some jobbers sell at retail, using their buying advantage to quote cut prices, and this results in their losing all their local business. The tendency of jobbers is to cover more territory, add more salesmen, push special brands whose prices they control, and quote net prices instead

THE PLODDER TRAVELS FAR.

Don't trust to luck, but hard work. Drudgery is the gray angel of success.

Good habits and the ability to grasp opportunities and see possibilities are indispensables.

Such tools as honesty, order, patience, self-denial, accuracy, promptness, punctuality must be always at hand, oiled and sharpened. Be ready for emergencies and never doubt.

There is no royal road, no special gift. "It is the rut, the plod, the grind, the humdrum that win."

Make your work your hobby. If you cannot realize your ideal, idealize your real. Be cheerful, look for stars, not sunspots. If you fall, don't forget that "your greatest glory consists in rising every time you fall."—Horace Falls.

HINTS TO SALESMEN.

Sizing Up Your Customer's Likes and Fancies —Impression an Earnest Suggestion Makes.

The late Philip D. Armour is credited with saying to his sales force on one occasion: "There are two things which a salesman must know. One is your own proposition, and the other how to get the other fellow's viewpoint."

In regard to the first very little need be said, for it has been recognized since the selling game began that a man must know his own proposition before he can sell it. Know it inside and out, backward and forward. Believe in it. If you do not, study the situation and find out why you do not. Make suggestions for the betterment of it. They may not be adopted, but the man "higher up" will know that you are thinking and trying, and then some day you will strike a suggestion that is particularly good, and it will be adopted.

In regard to the second, not one salesman in ten recognizes the vast importance of applying the knowledge of his own proposition to the other fellow's problems. If you were a lawyer you would call it folly to go into court to try a case without thorough preparation. That preparation means not only arranging all the points of your side of the case in order, but also the marshaling of the points of your adversary's case.

Not even the law requires more careful study than salesmanship. You have your problems; so has your customer. Find out what they are. Analyze them. Know the remedy. Then suggest it. Your suggestion may not meet with your customer's approval, but his knowledge that you have studied the case makes a favorable impression.

Be careful, of course, in making your suggestion not to create the idea that you think you know all there is to know on the subject, but you should know those things about your customer's business which bear a relation to your own proposition, and, knowing them, do not be afraid to say so. Your experience as a salesman may have taught you some things which your customer will be glad to know, because frequently your customer is also a salesman, and even though he is not, he will appreciate your effort.

You must know the things that you are talking about or you cannot be honest with yourself and the man you are dealing with. Nothing so quickly gains for you the confidence of your customer as his belief that you can be trusted. When he knows that he can believe what you tell him, two-thirds of your fight is won. To make him know this you must be honest with him.

Probably in no field of endeavor is a general fund of information more useful than in selling. In the writer's own experience a slight knowledge of Greek mythology assisted greatly in closing a good contract.

Your customer will have fads. Find out what they are. Know why he looks at a certain problem in a certain way. The lawyer, cross-examining a witness, does not need the tact that a salesman does when he is cross-examining his customer, because the witness knows that he is being cross-examined; the customer must not.

Your ability to find the other fellow's viewpoint lies almost entirely in your ability to question him skillfully, says Better Business. Of course, you may, in fact must, through different channels get all the information possible concerning your prospect before you approach him, but when you actually get down to brass tacks it is what you find out from your personal touch that counts. You look at things differently when they are presented in different lights—why shouldn't he? He will, and you must know the reason.

HOLIDAY POST CARDS.

Next Few Months Offer Dealers an Excellent Opportunity to Clear Up Large Stocks of Special Holiday Cards and Novelties.

The near approach of the Christmas holidays, which are followed soon after by Lincoln's and Washington's Birthdays and then the Easter holidays, brings to talking machine dealers handling post cards and other novelties a reminder that it is a good time to give consideration to the matter of stocking up. The popularity of the fancy post card as a medium for seasonable greetings has not diminished—in fact, nothing on record compares to the growth in demand of these specialties. At a time like this the higher-priced and therefore more profitable lines are the kind that will find quickest sale. By this we mean cards that will retail at from six for a quarter to three for a quarter, though, of course, there will always be those who desire the cheaper grade. After and between the holidays, however, the special day card will be dropped temporarily and the view card will come into its own. Each year adds to the popularity of these cards and the retailer who keeps his stock well supplied will find himself well repaid for his investment. While novelty cards (by that we mean special day cards) change each year the view cards are standard and as long as they are of good quality there is no fear of their becoming dead stock. Local views are especially live sellers and the dealer in any city or town who neglects having a full assortment is losing a lot of good money. Buyers never tire of them and the more there are and the better they are the more liberal and more profitable the business. Advance orders are essential and the dealer who has not placed his orders for these cards is quite likely to have more or less trouble securing the goods when he wants them.

Whenever it is possible it is well to obtain some exclusive views. This can often be done by either taking a photograph or having one taken for you of the particular object or objects of interest in your locality and either sending this with your order for so many thousand to your manufacturer, who will print your own name along the margin of the address side—or else send your photograph to some well-known engraver who makes a specialty of this work and have a cut made, from which almost any local printer can run off any desired number. By the latter process time can often be saved, especially if manufacturers have a rush on.

The Oral Motion Mfg. Co., of Chicago, has been incorporated with the secretary of the State of Illinois for the purpose of manufacturing oral and moving picture machines, with a capital of $100,000. Those interested are B. F. March, W. H. Eckert and M. I. Twohey.

To Business Men

Business men in every line admit the value of good trade papers.

A trade paper must be original—it must contain a variety of matter including news service—technical information—in fact it must crystallize the entire news of the special business world, and be a helpful adjunct to every department of trade.

Scan the columns of The Talking Machine World closely and after you have completed an analysis of the contents of this publication see if you can duplicate its value in any other trade!

The World is a help to the talking machine business.

It exerts an healthful optimism.

It wields an influence for the good and every man who sells talking machines, no matter in what part of the universe he may be located, should receive this publication as regularly as it is issued. He is missing a vital business point if he fails to do this.

Thousands of dealers not only in the United States but in every country on earth consult the pages of the World regularly.

They draw from the World pleasure and profit.

The talking machine business has a brilliant future, and this publication is doing much to enlarge the business horizon of every retail talking machine man in the world.

To receive this paper annually costs but $1.00. All foreign countries $1.25.

ZON-O-PHONE

10 inch 65c. **DOUBLE RECORD DISCS** 12 inch $1.00

Zon-o-phone Records are pre-eminently the BEST that money, brains, and a thorough knowledge of the art of sound recording can produce.

They are justly famous for their remarkably clear, natural tones, absence of scratch and wearing quality.

The greatest care is exercised in combining the selections, each side of the disc presenting the latest and best in popular music or standard compositions.

The price appeals to the masses, the quality to the classes, making them indeed a popular record at a popular price.

A new catalogue of Hebrew Single Side Selections has just been issued. Solos by Mme. Prager, Mr. Juvelier, Master Mirsky, the boy soprano, and other eminent singers. These are undoubtedly the most perfect Hebrew records ever recorded. 10 inch, 50 cents, 12 inch, 75 cents.

Resolve yourself, Mr. Dealer, into a committee of one and investigate these claims. Consider, criticize, compare. ZON-O-PHONE RECORDS will stand the test. A trial will verify all that we say.

The Talking Machine World

Vol. 5. No. 12. New York, December 15, 1909. Price Ten Cents

THE "TALKER" AS A TEACHER.

David Bispham Pays a Great Tribute to Sound Reproducing Machines in a Recent Paper—Important in Vocal Education and in the School—His Timely and Excellent Remarks Worthy of the Closest Consideration.

David Bispham, the distinguished operatic and concert baritone and president of the American Music Society, is unquestionably one of the greatest authorities on the interpretation of singing in the country to-day. Writing in the current issue of The Etude on this subject he dwells especially on the value of education, culture and experience as an important means toward the ends desired. In this connection he says:

"One should hear a great many singers (artists), actors and speakers. One should read a great many books. One should see a great many beautiful pictures and wonderful buildings. But most of all, one should know and study a great many people and learn of their joys and their sorrows, their successes and their failures, their strength and their weaknesses, their loves and their hates. In all art human life is reflected, and this is particularly true in the case of vocal art. For years, in my youth, I never failed to attend to all of the musical events of consequence in my native city. This was of immense value to me, since it gave me the means of cultivating my own judgment of what was good or bad in singing. Do not fear that you will become blase. If you have the right spirit every musical event you attend will spur you on.

"You may say that it is expensive to hear great singers, and that you can only attend recitals and the opera occasionally. If this is really the case you still have a means of hearing singers which you should not neglect. I refer to the high-class sound-reproducing machines which have grown to be of such importance in vocal education. The modern records are nothing short of marvelous, and my earnestness in this cause is shown by the fact that I have long advocated the employment of the sound-reproducing machine in the public schools, and have placed the matter before the educational authorities of New York. I earnestly believe that one-half an hour a day should be given to the proper interpretation of musical masterpieces through the medium of the sound-reproducing machine in the class room, and that this half hour would be quite as valuable to the little ones as that devoted to finding out how many ounces of sugar there are in ten and a half barrels. Nothing systematic has yet been arranged for the use of the sound-reproducing machine in the class room, but I earnestly urge the music teachers of this country, who are working for the real musical development of our children, to take this matter up in all seriousness. I can assure them that their efforts will bring them rich dividends in increased interest in musical work of their pupils."

This is entirely in line with the opinions of other eminent vocal teachers in this country, who are to-day using the talking machine as a means of teaching style and interpretation. By this means they have all the great artists of the world at their disposal. They hear them at their best, for it must be remembered that each record made is not the result of haphazard singing, but "the survival of the fittest." In other words, it is the best record of several made—one that pleases and satisfies the singers, hence it is authoritative and immensely valuable to the teacher and the pupil.

David Bispham's words are worthy of consideration by those skeptics who like to sneer at the talking machine and its artistic influence. The attitude of people of this kind is to be pitied, for no intelligent, progressive mind can to-day ignore the fact that the talking machine, as a medium of reproducing the voices of the great artists of the world, is a factor of tremendous import in stimulating a greater appreciation of music and in bringing joy into the homes of those who are hungry to hear the great musical numbers of the masters sung by the leading singers of the world.

We also trust that Mr. Bispham's suggestion of the employment of the talking machine in the public schools will be taken seriously.

Over a year ago we suggested that dealers should endeavor to bring these machines to the attention of the school authorities, because we believed that the talking machine is just as effective in promoting a knowledge of good music as is the piano player which is now being utilized by lecturers and music teachers in all the leading colleges of the country. They both have a mission, and can perform it well.

DAVID BISPHAM.

POINTERS ON LANDING PROSPECTS.

Some Good Suggestions by Geo. H. Eberhard Which Are of Interest to Jobbers' Representatives and All Engaged in Building the Business Structure.

There is good meat in a talk to salesmen recently made by G. H. Eberhard, which can be digested with profit by talking machine men. It is his opinion that while, of course, there is always the exception, it is better, as a general rule, to see the prospective customer first. "Particularly when doing introductory work," says Mr. Eberhard, "which is the foundation of our business growth, you should aim to go after the dealer you are not selling first. When you start out fresh in the morning, then is the time to go after the fellow who is not handling our lines. All that you sell him is clear gain. It's easy enough to see your regular trade and friends afterward. The habit of many salesmen is to rush out among the good customers and get their business and then try to land new trade. If you will think it over it is a good deal like working backwards. Should you get a big bunch of business from your regular trade, you are apt to feel satisfied, and, if you don't you will feel disappointed. No salesman can work new trade when he is satisfied, in this sense, or discouraged or disappointed.

"Adding to the business structure every day by lining up new trade and bringing in new business, as well as taking care of the old, is necessary to our progress. When you sell an old customer you should drive home some new item that he is not buying. It's another chance to build the business. Selling to a customer who is satisfied, who likes us and likes our lines, is not salesmanship. Calling on this class of trade is merely to show that we are giving good service and to see that the customer does not get away from us for lack of intelligent attention, and that his business grows by his adding new items to his orders. It is much easier to increase sales on our lines than we are apt to think and the fault is usually with the individual's sales effort, knowledge of his line or plan of action. It is not the goods we sell, because we can all point to cheerful, satisfied customers on every item, and if a line can boast of this, it is salesmanship that will get us more of the same kind of trade.

"One needn't be a genius to be able to dress a window properly—the necessary requisites, a good bunch of common sense, with an application of your knowledge of business, art and human nature.

"Who makes the goods talk—whoever exhibits the true nature and uses of an article of commerce—whoever correctly and interestingly tells the news about his merchandise—he is the true advertiser.

"The up-to-date salesman reads and studies, just as men in other professions do.

"Method goes far to prevent trouble in business; for it makes the task easy, hinders confusion, saves abundance of time, and instructs those that have business depending, what to do, and what to hope."

HOW CONCERTS HELP TRADE.

Dealers Should Not Overlook This Effective Means of Bringing Their Goods Before New Prospects—Enterprise of Wanamaker's Talking Machine Department Worthy of Emulation By Enterprising Dealers Everywhere.

"Opera News" is the title of a very clever little paper which has been issued by John Wanamaker in Philadelphia and New York. It is devoted to comments upon the current musical and operatic productions, and in this connection it is announced that lecture recitals of the grand operas on the days preceding their rendition are given at Wanamaker's by Jos. M. Rogers, illustrated by the famous grand opera stars on the Victrola with grand organ and piano. On the back page of this sheet appears a list of Victor records given each week and consisting of extracts from the various operas played at the opera houses.

We referred to this plan of publicity last month, and consider it one of the most effective and progressive schemes for concentrating attention on the merits of the talking machine which has yet been conceived. It appeals to a class of purchasers who, unfortunately, have not given as close consideration to the talking machine as they should, and demonstrates clearly that the voices of the great artists can now be heard as effectively in their own homes as in the opera house.

We would like to appeal afresh to dealers all over the country to consider the giving of concerts, no matter on how small a scale. They make friends for the dealer and are most educational in stimulating a knowledge of the wonderful possibilities of the talking machine—and by this we mean all makes—among those musically inclined, who are gradually being made to realize that the talking machine is proving one of the greatest factors which we have today in this country in bringing a knowledge of the best in music to the home.

IT OCCURRED IN BOSTON.

In Boston, as everyone knows, the symphony concerts are viewed in the light of sacred ceremonials. In this connection the story is told of two little girls of a certain family who returned from the music hall "in a state of mind." One of them carried an expression of scorn; the other an air of great dejection. "What is the matter, girls?" asked some member of the household. "Was the concert fine?" "The concert was all right," responded Eleanor. "The trouble was with Mary. She disgraced herself." "Disgraced herself!" "Yes, she sneezed in the middle of the symphony."

TRADE ON THE PACIFIC COAST.

Dealers Well Pleased with Talking Machine Business for November—Holiday Buying Already Begun—Better Class of Goods in Demand—Heine Piano Co.'s Fine New Department—Bacigalupi & Sons Get Edison Shipment—Columbia Co. to Remain in Present Quarters—Difficult to Get Sufficient Stock—Featuring Dr. Cook's Record—Other Items.

(Special to The Talking Machine World.)

San Francisco, Nov. 29, 1909.

All the San Francisco talking machine dealers report a further increase of business for the month of November, the retailers being especially gratified with the showing made. Without exception they find a far heavier volume of sales than a year ago, and while it is of course impossible to get any definite figures at this time, the wholesalers say that if the next month holds up anything like as well as that just past, the total sales for the year will be far in excess of anything in former years. The quietness following the Portola festival lasted only a short time, and the season of Christmas buying has begun unusually early. Local retailers have been rushed, and those outside, while they ordered quite liberally early in the season, report that their supplies are already running low.

The class of goods sold on the coast has shown a steady and constant improvement. Victrolas have of course been a tremendous success from the start, and a large inquiry is reported for the more expensive styles of machines produced by the other companies, while machines of a really cheap character find little sale anywhere. A similar observation is made in regard to records. Popular music, etc., is of course still popular, but quality is insisted upon, and the great vogue of expensive machines has caused an enormous increase in the sale of the more expensive opera selections.

Frank Anrys, manager of the Wiley B. Allen Co., says: "Our talking machine department is making very satisfactory progress. We are now all on a common basis in this line, and the amount of business we get depends entirely upon the service we can give, the attractiveness and convenience of our quarters, and similar factors. We believe nobody in the city can surpass us in these particulars, and we accordingly have the highest hopes for the future of this department. It is a new feature, but is becoming known, and the volume of business is growing steadily."

The Hauschildt Music Co. of Oakland, Cal., which opened a branch in San Francisco this week, intends to install a fully equipped talking machine department in the store at 51-53 Grant avenue. The stock is not yet on hand, but will be ready early in December, and demonstration rooms are being fitted up on the third floor.

The Heine Piano Co. have fitted up a fine talking machine department in the basement of the new store on Stockton street, near Market, putting in a large stock of Victor goods under the supervision of J. H. Wales. There are four nicely appointed demonstration rooms.

Peter Bacigalupi & Sons have just received a large shipment of Edison goods, of which they were badly in need to fill current orders. They report a heavy demand for Cygnet goods, which keeps them busy shipping, and are also sending out large lots of records. They state, in fact, that business on the entire Edison line is picking up with the approach of the holidays.

C. E. Lyons, from the factory of the National Phonograph Co., passed through from the north recently with samples of the new Amberola machine, which has attracted great interest on the part of local dealers. C. H. Wilson, general manager of the National Phonograph Co., also spent last week in this city, and is now visiting other points on the coast.

W. F. Geary, of Kirk, Geary & Co., of Sacramento, Cal., jobbers of Columbia records in the northern part of the State, is in San Francisco this week.

The Columbia Phonograph Co. have been unable to close a deal for a downtown location on favorable terms, and have finally made arrangements to remain in their present home at Van Ness avenue and O'Farrell street through the winter. The retail department has been rearranged for the sake of greater convenience, and in spite of the distance from the regular retail district of the city, Mr. Scott, the local manager, is having quite a rush of business. The wholesale department, however, will be the main standby, and the sales in this department have shown a most encouraging growth during the past year. This office has been rather short of goods lately, and a large shipment which arrived last week has helped to relieve the situation. Practically all the goods, however, were delivered to the outside agencies. The new Graphonola-Elite has been a subject of general inquiry, and a number have been sent to other branches, leaving only one or two in stock here. While quite a lot of the new four-minute records have come in, the shipments so far have hardly been sufficient to fill the many orders taken in advance.

Mr. Beck, of the retail talking machine department of Kohler & Chase, is now very busy with preparations for getting into the new quarters, which will be occupied in about a week. The department will be located on the fifth floor of the new building, and is being fitted up in most elaborate style, ten rooms being provided for demonstration alone. The regular business is very active at present, and it is expected that with the increased facilities there will be a decided improvement. Kohler & Chase have had notable success with the Cygnet goods, and have taken quite a number of advance orders for the Amberola, which they expect to have in stock shortly.

Mr. Jones of the Pacific Phonograph Co. is also working on preparations to get into the new quarters, but will probably not attempt to move the wholesale stock until the end of the month, as with the present rush of business there is too much other work to be done. The company are keeping their stock of Edison goods complete in every way, and have found this policy a great help in the development of their trade.

Sherman, Clay & Co. have quite a distinctive talking machine display in their window this week. The feature is the record of Dr. Cook's narration of his North Pole experiences, and the display shows a full-size figure representing Dr. Cook, with a realistic arrangement of polar bears, icebergs, etc., giving the window quite a Christmas appearance.

The Wiley B. Allen Co. are also making a special display of the Dr. Cook records.

Sherman, Clay & Co. report increasing sales of the Victrola all the time. They are giving this machine some extensive advertising in this city at present, and expect a very heavy demand during December.

Adams & Shinn have bought out the talking machine store of Wauschope Bros. at Lodi, Cal. The business will be conducted under the name of the Lodi Music Co., both Victor and Edison goods being carried.

YOU GET IT ALL FROM US

Quality, Service, Satisfaction and Success

Send your Victor and Edison orders to the "House of Quality." All orders for records, both Victor and Edison, are being filled with records of the most improved recording now leaving the factory. This is important to you.

Our dealers say that we pack goods with more care, ship more promptly and fill orders more completely than jobbers who sell talking machines as a side line Send your orders to the "House of Perfect Service." It costs no more.

The man who hasn't made an error is dead, and those who say they never make one will die soon. We admit making an error occasionally but we are just as quick to rectify it as we are to acknowledge your remittances. That is Satisfaction.

If you will send your orders for Victor and Edison to us you will not only be on a par with your successful competitor, but you will stick out from the bunch like a large wart on a small pickle.

Eastern Talking Machine Co.

177 TREMONT ST. BOSTON, MASS.

WULSCHNER-STEWART CO. OPENING.

Well-Known Indianapolis Music House Entertains Thousands of Visitors on Interesting Occasion—Arrangement of the New Quarters.

The formal opening of the new establishment of the Wulschner-Stewart Music Co. at 229-231 Pennsylvania street, Indianapolis, Ind., was held on November 24 and was a decidedly interesting event, judging from the thousands who attended. Orchestral concerts were given in the morning, afternoon and evening, by prominent local musicians, and souvenirs were presented to all visitors. The entire building was elaborately decorated for the occasion.

The new store is one of the handsomest music houses in the Middle West, and elicits words of commendation and surprise from those competent to judge.

Phonographs are displayed in the commodious basement, which is divided into a number of cozy salesrooms; the main floor is given over to sheet music, small instruments, etc., with the offices in a mezzanine at the rear. The three upper floors are occupied by salesrooms for pianos and player-pianos.

LEASE NEW QUARTERS.

Daynes-Beebe Music Co., Salt Lake City, to Have More Commodious and Handsome Store —Columbia Jobbers.

The new Daynes-Beebe Music Co., Salt Lake City, Utah, have leased elaborate quarters at 45 South Main street, where they will occupy over twelve thousand square feet of floor space. Plans have been completed for an entire new front, as well as a handsome main show room and separate soundproof parlors for demonstrating talking machines and pianos. They are exclusive Columbia jobbers.

Victor Red Seal Records

Every Victor dealer owes it to the future of his business to push the sale of Red Seal Records.

Among the most successful Victor dealers to-day are those who have constantly kept "grand opera" in front of their customers—by giving frequent concerts—by circularizing—and by providing attractive and appropriate exhibition rooms for the Victor.

These dealers have become enthusiastic on the subject of grand opera, and they have made enthusiasts of their customers.

A Red Seal customer is one of your best advertisements—he gets his friends interested in the Victor—creates a number of opportunities for you that are sure to bring new sales if you follow them up. Most Red Seal customers are liberal buyers; they come in regularly for new records; and their interest increases with every new record they buy.

You know the profits in Red Seal Records. And you know that other dealers have "come up" from a small beginning by recognizing the great value of the Red Seal idea.

Why don't you make a feature of Red Seal Records and put your business on a bigger paying basis?

MILWAUKEE'S BUDGET OF NEWS.

Holiday Business Now in Full Blast and Dealers Pleased with Results—Various Stores Decorated for the Season—Hoeffler Manufacturing Co.'s Handsome Exhibit—Eicholz & Schefft Succeed Simon Goerke—Awaiting the First Amberolas—Gimbel Talking Machine Department Opened—News of the Travelers—Dealers in Janesville, Wis., Worried—Edison Business Phonograph in College—Other Items of General Interest.

(Special to The Talking Machine World.)

Milwaukee, Wis., Dec. 8, 1909.

The holiday business in the Milwaukee talking machine field, in both retail and wholesale lines, is now in full blast and the prediction is made by leading dealers that trade will be double that of a year ago. Sales are not only larger and more frequent, but demand is much stronger for the higher class machines. Take it all in all, dealers are highly satisfied with conditions and predictions are being made that business, even after the holidays, will continue to be of the best.

The biggest boom is being felt in retail lines of course. People seem to once more have plenty of money and are showing a decided inclination to spend a good share of their holiday allowance for talking machines and records. Dealers expect an exceptional holiday trade this year, following a general resumption in all business lines and from the fact that holiday sales for the past two years were not up to the normal. While wholesale trade is very good, there is not the perceptible increase here as in the retail field, due to the fact that dealers all over the State have been replenishing their stocks for many weeks in anticipation of a lively trade at this time.

Milwaukee dealers have their stores in gala day attire for the holiday season and several innovations in the way of window displays have made their appearance. One of the most interesting of these is an attractive exhibit of Victor and Edison machines at the Hoeffler Manufacturing Co. here a real live "Santa Claus" attracts the attention of Christmas shoppers, calling their attention to the big showing of machines and record hits.

Simon Goerke, the well known dealer at 839 Third street, has sold his stock and business to George Eicholz and Charles H. Schefft, who will conduct the business at the same location under the firm name of Eicholz & Schefft. George Eicholz is the proprietor of a talking machine store on Fond du Lac avenue, while Mr. Schefft is secretary of the Ross, Schefft, Weinman Piano Co., well known piano dealers at 422 Broadway, representatives of the Hazelton, Behning, Mehlin and other leading lines. Oscar Schefft, son of Mr. Schefft, will have charge of the newly purchased store.

The Amberola, the new cabinet Edison, is being anxiously awaited by Milwaukee dealers. It was expected that the machine would make its appearance promptly at the opening of December and dealers placed their orders for the machine accordingly. Judging from the interest already evinced in the machine, it will be a big seller in the Christmas trade.

William P. Hope, traveling representative of the National Phonograph Co. in Wisconsin and Upper Michigan territory, has just left Milwaukee for an extended trip in southern Wisconsin.

Temporary quarters have been opened at the Gimbel Bros. department store for the new talking machine department which was installed some time ago. A complete line of Victor machines, records and appliances are being displayed for the holiday trade under the general supervision of E. S. Bridge, manager of the piano department of the store. Architect John Henge, Jr., has been instructed to prepare plans for $2,000 worth of alterations on the second floor of the big store where the elaborate talking machine department will be installed permanently. It will not be possible for the new department to be installed in the new quarters before the holidays, but it is expected that it will be ready soon after the opening of the new year.

William Schmidt, traveling salesman in Wisconsin for the Victor Co., has resigned to become general wholesale manager for Lawrence McGreal. A successor to Mr. Schmidt has not as yet been chosen. In accepting the position with Mr. McGreal, Mr. Schmidt returns to the field which he left some months ago to go on the road.

Some big sales of the Edison Business Phonographs were made this month to leading manufacturing plants of Milwaukee by J. H. Becker, Jr., manager of the talking machine department of the Hoeffler Mfg. Co. The Cutler-Hammer Co., manufacturers of electrical apparatus, and the H. W. Johns-Manville Co., asbestos goods manufacturers, have each installed a large number of machines and are especially well satisfied with results.

"One of the best and wisest things that the Victor company ever did was to place on the market the Victor light opera selections," said several local dealers to The World correspondent. "It is astonishing to note the interest that the public is taking in these records and it goes without saying that sales of records of all the big opera hits are especially heavy."

Roy Keith of The Talking Machine Co. of Chicago, and H. Gibbs of the Rudolph Wurlitzer Co. of Chicago, were recent Milwaukee visitors.

The De Luxe model Grafonola and the "Elite" model Grafonola, the latter the first hornless machine to be placed on the market at $100, have arrived at the Milwaukee establishment of the Columbia company and are creating no end of interest. Manager A. G. Kunde and his capable wife report an excellent business in the Columbia line. The Columbia store has been meeting with an especially fine sale of the new four-minute indestructible cylinder records.

E. C. Plume, western wholesale manager of the Columbia Talking Machine Co., with headquarters at Chicago, recently called upon the Milwaukee Columbia branch.

Paulis Bros. at Manitowoc, Wis., have purchased the entire talking machine stock of A. Rummelie and are now displaying the most complete line of Victor and Edison machines in the city.

W. J. Augustin, the talking machine dealer of Fond du Lac, Wis., has opened his new branch store at Oshkosh, Wis., a move which he has contemplated for some time. The new branch store is in charge of G. R. Wolf of Milwaukee, an experienced talking machine salesman.

Talking machine dealers at Janesville, Wis., are much concerned over the report that professional and business men of that city are preparing a petition to the Common Council calling for the abolition of the talking machine at the five and ten-cent theaters in that city. It seems that business men located near the theatres cannot become accustomed to the talking machine "barkers" and they have declared them to be nuisances and a menace to the nervous system. The business men say that they would not object to the use of a music box by the theatres but that they have declared everlasting war against the talking machine.

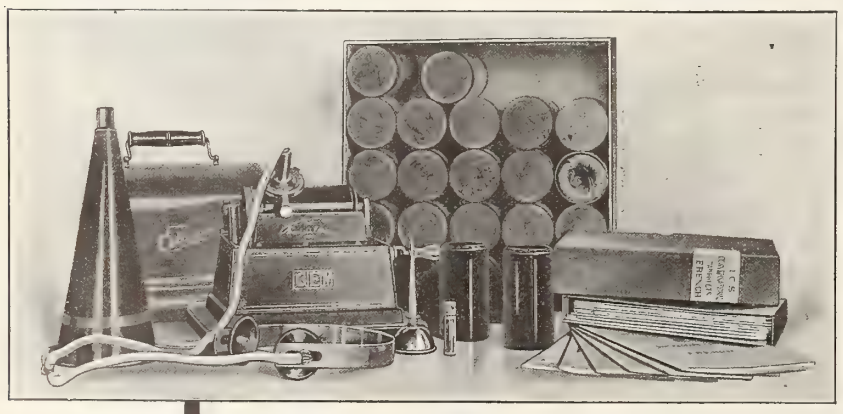
The "4 C" business college at Madison, Wis., is meeting with great success in the use of the Edison business phonograph. The machine is being used extensively in the shorthand department where fifteen students take dictation from it at the same time.

COLUMBIA FACTORY RUNNING NIGHTS.

All the departments of the Columbia Co.'s big plant at Bridgeport, Conn., are now working day and night up to nine o'clock. Bridgeport has often been called the industrial capital of Connecticut, and the Columbia Phonograph Co.'s factories constitute one of Bridgeport's busiest institutions.

If some salesmen would sell as many goods in the merchants' stores as they do in the hotel lobby, more would be making $10,000 per year.

The New I. C. S. $35 Language Outfit



One firm has ordered 300 outfits. Another firm sold outfits 24 hours after their receipt. They are ordering them all along the line wherever the outfits are shown. Why? Because they are sellers; they are profit makers; and they cater to a field that will quickly appreciate and purchase them. This outfit provides the very best method for teaching foreign languages in the world; a method that is indorsed by professors of the leading colleges and by the French, German, and Spanish Embassies at Washington. It teaches French, German, Spanish, and Italian to English-speaking people and teaches English to foreigners. The I. C. S. Outfit consists of an Edison Gem Phonograph made especially for language work, small horn, head-band hearing tube, oil can, and 25 conversational records teaching pronunciation that is guaranteed to be absolutely correct with native intonation and inflection. Accompanying these conversational records, there are pamphlet instruction papers teaching the theory of the language. Not only is this the most complete and by far the best language outfit on the market, but it is the cheapest as it sells for only $35. If you are alive to your best business interests, you will write today for further particulars—for the sake of increased business write us today.

LIVE HOLIDAY ADVERTISING.

Placed in New York Newspapers by National Phonograph Co.—Some of the Convincing Reading Matter—The Phonograph as an Educator—Dealers Should Profit by the Publicity and do Their Share at Once.

The Christmas advertising of the National Phonograph Co. in the New York evening papers is attracting a great deal of attention, not merely from the trade, but from all those who are interested in progressive publicity.

In the New York Evening Journal and The World recently they had strong announcements in the form of editorials with side captions which occupied the full depth of the page, three columns wide. The text was instructive and interesting and formed a strong argument for the phonograph from educational, musical and amusement viewpoints. We reproduce the text herewith, so as to give an idea of the kind of work the National Phonograph Co. are doing in New York to stimulate trade for their dealers:

Your Children and Their Musical Education.

"Although New York City offers greater advantages in the way of a musical education than any other city in the world, and although every mother and father recognizes the importance of a certain knowledge of music in the development of a child's character, the great spectre of expense handicaps the children of New York City in gaining even a slight knowledge of good music.

"In Italy and Germany, everybody sings from childhood. Music is cheap over there, and people of all classes are familiar with the airs from the great operas. And it is a notable fact that some of the greatest singers of these countries have risen from the humblest circumstances. For instance, Campanini, the great Italian tenor, was discovered singing at his blacksmith's forge. Madame Schuman-Heink, the greatest Wagnerian mezzo-soprano of all time, was of humble birth.

American Musicians Greatest in the World.

"Yet the great success of Mary Garden, Madame Nordica, Riccardo Martin, Alfred Spalding, the violinist, and Fanny Bloomfield-Zeisler, the pianist, proves that Europe has no copyright on genius—that American musicians rank as the equal, if not the superior, of those of all other countries.

Your son or your daughter may have the making of the greatest musical genius of the age. The sparks of genius may burn just as brightly in your own child as in Mary Garden or Riccardo Martin. You do not know—you cannot know until his or her musical appreciation has been brought out by instruction.

The Importance of Hearing Good Music.

"By instruction and musical education is not meant simply taking lessons and practicing. The important part is to hear and know good music. The fact is illustrated in the following story: A young girl went to Anton Rubinstein, the great composer, for advice regarding her musical education. She had $100. Rubinstein advised: "Put $10 into music lessons—put the other $90 into hearing all the best music of the opera, concerts and oratorios that you can."

"You may not be able to give your children a technical musical education, and there is no reason that you should before they have shown sufficient musical talent to warrant it. But you should not withhold from them the advantages of hearing the best music that the Metropolitan and Manhattan Opera Houses afford—especially as this part of their musical education is nine times as important as the technical part, and when these advantages are within your reach, and well within your means, no matter what your circumstances.

There Is No Excuse for Any Home Being Without a Phonograph.

"The Edison Phonograph brings to your home the best music, played and sung by the greatest musicians of the age. And it brings to you and your children a knowledge and appreciation of good music, which is the foundation of musical training. There is no excuse for your home being without an Edison phonograph when you consider that you can have an Edison phonograph at your own price—anywhere from $12.50 to $125—and on your own terms.

"There are Edison phonograph dealers all over Greater New York—go in and hear the Edison to-day. And take the children with you. If you don't know where your nearest Edison dealer is, write and ask the National Phonograph Co., 142 Lakeside avenue, Orange, N. J. If there isn't and Edison dealer just around the corner from you, there is one within a five-cent trolley ride.

"There should be an Edison phonograph in your home now—for your children's sake. There is no excuse for being without one."

Of course, the above announcement naturally suffers for lack of display, but the reader can get an excellent idea of how important and valuable is this campaign in stimulating interest in the phonograph.

It is really up to the dealers to take advantage of this work and make themselves known, so that the public will know where Edison phonographs can be purchased in New York. The dealers must not leave all the work to the manufacturers. They must do their share. It is through co-operation that success can be achieved, not merely this holiday season, but at all times.

BETTER THAN THE "SWEAR ROOM."

Editor Swears Into Phonograph and Realizes the Enormity of His Crime and Reforms.

(Special to The Talking Machine World.)
Indianapolis, Dec. 3, 1909.

Some men can smother their feelings when things go wrong with them, but not so with James H. Adams, a Vincennes newspaper man. He likes to do things "up brown," when he does them at all, and so with the "cussing.' Adams was in town the other day, and one of his friends heard from him his own story of how he spent half a day unloading himself into a phonograph.

It was all after the last State campaign. He was among the most hearty of the Watson supporters. He was for Watson through and through, and when Watson was defeated he simply couldn't believe it. It made him so mad that for a day and a night he "brooded." It was on the second day that he took his spite out on the phonograph. He uses one at his office to dictate letters into. He took this home, locked himself in his room and began. He used nine records telling the phonograph what he thought of the political situation.

Then he listened to the instrument reel off the talk to him. He sort of liked it; and still it seemed to him there was something the matter. So he turned and dictated a statement into the machine, promising never to lose his temper again and never to say so much as a "cuss" word again as long as he lived.

FRANK SCHILLING GETS COLUMBIA LINE.

The Columbia line has been placed with Frank Schilling, the leading piano dealer of Oswego, N. Y. He placed a substantial initial order for immediate delivery. The goods have been forwarded, and Mr. Schilling promises to be one of the representative dealers of the Columbia Phonograph Co., General, in western New York.

Beginning with the January, 1910, edition, the size of page of the Victor record catalog will be increased to 5x7 1-4 inches, which is practically double the present size. The Victor Co. state that this enlarged page will enable them to materially increase the size of the type and pictures and to better arrange the listing of the records.

YOU MUST ACT QUICK AS LIGHTNING!

"3-IN-ONE" PRICES ADVANCE JAN. 1!

December is the last and *only* month you'll ever be able to get "3-in-One" at the old (the present) prices!

If you're as wise as hundreds of other good retailers have been during the last month, you'll order a big "3-in-One" supply for 1910 *immediately!*

Remember you can SELL HALF AGAIN AS MUCH "3-IN-ONE" IN 1910 AS YOU SOLD IN 1909!

Why?—*Because* we have greatly increased our newspaper, magazine, billboard and circular advertising—*because* our unique plan of putting a generous "3-in-One" sample right into your prospective customers' hands *will* bring them through *your* front door with the money for bottle of "3-in-One" and then still more. We will sweep your counters clear of "3-in-One" in a *hurry.* We will sweep big, fat, EXTRA profits into your pockets, *IF* YOU STOCK UP NOW AT THE "OLD PRICES."

"3-in-One" is the fastest selling oil on the market—and the best oil, too. It's the only oil that lubricates, cleans and polishes *and* prevents rust. Has a hundred uses in every home, office, or factory. *Needed* by a hundred people where any other oil is needed by one.

Close manufacturing margin and heavily increasing manufacturing costs *compel* us to raise the price. We've given you ample notice. This is the last call.

Don't Forget.—Not an order at present prices will be accepted after Jan. 1, 1910. Jobbers in all lines are fully informed about the new prices and will maintain them.

Long Distance Telephones—Numbers 4677 and 4678 Gramercy. Cable Address: "Elbill," New York.

NEW YORK, DECEMBER 15, 1909.

BEFORE another issue of The Talking Machine World shall have appeared the curtain will have fallen upon 1909, a year which has been vastly superior to its immediate predecessor.

And yet through it all trade has been somewhat fitful.

Sometimes it has been surprisingly good, and then, without apparent cause or reason, the business springs apparently dried up so that no life was discoverable.

Then, again, they burst forth with geyser-like activity without the slightest warning.

It has been a fitful year, and there are still a few good days left in which to help bring up the average for December, and December is a month which is going to be particularly good in business circles, with its glad profit and inspiring hustle.

It is a season of activity and rush, and, quite naturally, there is a big influx of business and money, and it is those factors that make the merchant's prospects pleasant and gives him an incentive to continue definite plans.

It gives the salesmen—that faithful army who are to execute the planned manoeuvers—a spur, and the wiser salesmen—may their tribe increase—always do their best, anyhow, because it is the way to self-improvement and fits for higher place and higher pay.

There are some, however, who are apt to lie back in the harness when the pull is heavy and give themselves over to that tired feeling.

Now it is right here where a nice heart-to-heart talk in open meeting may do good, and yet will be doubly effective if the heads of the retail establishments themselves enter into the discussions.

1909 HAS been marked by continued legal strife in the talking machine domain, and thousands of dollars have been used up in legal battles in this trade which might have been saved for their owners.

More than one-half million of money has been given to operate the legal machinery and untold thousands in energy and time have been expended in consultation with lawyers in discussing the pros and cons of cases.

There is no industry, so far as we know, and we have the acquaintance of a few, which can compare with the talking machine trade for legal encounters.

It is a young industry, and since its inception it has been one constant long-drawn-out legal battle, and the end is not yet.

The talking machine men have been good plucky fighters, and they have not hesitated to draw heavily upon their financial resources to defend what they have considered to be a rightful position.

That is good—it is the right kind of spirit, but at the same time one sometimes cannot help thinking how much would have been saved had there been some sort of adjustment so that we could have coaxed down the dove of peace upon the embattled scene?

The dove at times would have found trouble in finding a landing place.

THE Christmas spirit is abroad in the land and there is liberal purchasing in all lines.

Even the great cities of the East which have been in a state of somnolence, so far as retail trade is concerned, for the past few weeks have taken on surprising activity.

It is estimated that more goods will be purchased during the holiday season of 1909 than in any previous year in American history.

By this we do not mean to say that all trades will attain a record-breaking position, for they will not.

We know of some industries that will not reach the point gained in 1907.

We know of others that will far exceed it, but, taking the country as a whole, it may be safely estimated that more goods will be sold during the holiday season than in any previous year since Columbus traded beads with the Indians.

Our reports from the central cities of the West show that the talking machine men there are enjoying a magnificent business, particular emphasis being placed on the higher-priced machines.

Trade in this special field is improving in the eastern part of the country, and everywhere the spirit of Yuletide is made manifest in liberal purchases.

DURING the past year The Talking Machine World has made steady advance, and it has a host of friends in every part of the world with whom it is in close and regular contact.

We are in constant receipt of communications praising the policy of this paper and conceding its usefulness.

We cannot, of course, print the hundreds of letters which we have received from men who believe in The World and look upon it as a helpful force to their business, but it may not be deemed evidence of weakness on our part if we reproduce two or three excerpts showing how The World is appreciated in various sections.

In a lengthy communication, Edward Borgum, general traveling representative for the Eilers Music Co., of Portland, says: "I have traveled extensively on the Pacific Coast and have found that all the successful dealers are readers of The World."

That is a point worthy of consideration.

R. T. Rhine, western representative of the Columbia Phonograph Co., Lincoln, Neb., says: "I believe The Talking Machine World is the best trade paper in existence to-day, and it should be read and appreciated by every talking machine dealer in the United States, for it not only furnishes valuable information, relative to patents, but every salesman will find just what he is looking for to help close that big deal he is so anxious about."

Then, across the water, Thomas Edens Osborne, one of the most progressive jobbers in Ireland, writes: "Your publication is indispensable. I use the word indispensable advisedly, for I do not feel there is any up-to-date dealer or jobber in the talking machine industry who does not look upon The Talking Machine World as a journal from which he will obtain probably more useful hints for the successful conduct of his business than all other periodicals connected with the talking machine trade."

We have hundreds of letters on file written in a similar vein, and in quoting the above we wish our many friends to know how deeply we appreciate their kindly sentiments.

It encourages us to hold to the lines which we laid down—it is gratifying, indeed, because it shows plainly that we have created what we started out to build—a helpful, instructive, elevating journal for the industry, and without the support and encouragement of our friends we should fail absolutely.

We need them, and when they say that they need us, it certainly sounds good, and to all of our friends in every part of the earth we wish a Christmas full of joy and cheer—chock full of business health and happiness, and a New Year which will bring still brighter and better things.

WHEN talking machines are sold on an instalment basis care should be exercised at all times in training purchasers so that they will meet their payments promptly.

It is certain if a customer feels that indifference is manifested towards him by the merchant from whom he makes a purchase he will very readily allow the regular instalment periods to swing by without a call at the wareroom to make his payment.

There is nothing like a perfect system which enables the merchant to rely with accuracy upon a certain amount of instalment money each month. He knows where he stands at all times.

The man who insists upon prompt payments on the part of his customers is viewed by the manufacturers who sell him as a safe and sound business man.

In order to make good collections it is not necessary to be offensive to customers, but a fixed policy in the collection department is certainly one of the best features which a business can incorporate in its working system.

Good collections invariably mean a good business and the man who compels his customers to live up to their obligations is adopting plans which will very materially ease for him the wearing strain of business.

Good collections mean a good bank account, and that's a mighty convenient asset to have.

There is no department of the business which requires closer scrutiny and consideration than that of collections—if a business is to succeed.

WHERE IGNORANCE IS BLISS.

Hazy Ideas of Daily Paper Writers Regarding the Talking Machine of To-day—One Paper Condemns Talker as Adjunct to Church Services in Manner That Betrays Pure Ignorance—Has Already Won a Place in Sacred Work—Dealers Should Make Subject Clear to Editors in Their Own Cities.

That there are still some editors and writers connected with the daily papers who have hazy ideas about the present-day talking machine is clearly evident from the remarks which come under our notice from time to time. For instance, discussing the progress of the talking machine editorially in a Western paper recently, the writer says:

"It has been suggested that the talking machine may be used also for public prayers, or for soloists in the church choir, and finally act as a substitute for the whole religious service. Think of a combination of diaphragms and revolving cylinders taking the place of sermon, hymns and players! The proposition sounds almost uncanny. There is something almost sacrilegiously suggestive about it. Is this the proper thing to be used in the worship of God? It is hard to resist the belief that a man who is converted under the influence of one of these screeching, sputtering machines had a mighty little soul to commence with. The talking machine might be used as a substitute for campaign speakers, for much of the stuff they tell the voter couldn't be worse; but when it comes to religious worship—but why say more to anyone who has ever been tortured by one of these public nuisances?"

This is the veriest kind of rot. The writer doesn't know what he is talking about, for if he made inquiries he would know that in hundreds of churches to-day the talking machine is utilized to good purpose. Instead of "torturing," or "debasing," it is elevating the human mind. As a matter of fact, there cannot be a comparison between the efforts of a lot of amateurs in the church choir and the magnificent singing of a sacred song, or hymn, by one of our great singers, through the medium of the talking machine. And, when accompanied by some musical instrument, either the organ, piano or strings, it is still more effective.

Talking machines are being employed to-day to supply music both instrumentally and vocally in a number of churches, and the congregations and ministers speak highly of them. Only last week we had the pleasure of conversing with the minister of a church in New York, who has used the Victor Victrola in his church services for over a year past. He, as well as his parishioners, are most enthusiastic over the splendid effects obtainable. By this means many famous artists are heard in vocal solos between tne regular choral services of the church.

Contrary to the opinion of the editor above referred to, we hold that the talking machine is a proper thing to be used in the worship of God. We would much prefer to hear a good singer through the medium of the talking machine than to hear the efforts of so many ambitious amateurs in the choir loft. The former gives pleasure; the latter often inflicts torture.

As a substitute for the minister the talking machine has also been employed to good purpose in the church. There are several cases on record where ministers, having been confined to their homes through illness, have made records of their sermons and had them delivered in the church. One minister in Sullivan County, New York, whose parish extends for thirty miles, has been able on off Sundays to send records of his sermons to his parishioners in outlying districts, and in this way he has provided spiritual aid and help every Sunday during the year, where formerly he was only able to visit the country churches personally every third or fourth Sunday. So it will be seen that in the religious sphere, as in that of amusement, the talking machine has a *raison d'etre*.

This kind of balderdash—maligning and underestimating the talking machine—which we read of from time to time in the daily papers, is becoming tiresome, and it would be hardly worthy of serious consideration were it not that comments of this nature have a tendency to misinform and mislead the public.

As we said last month, dealers should make it a point that whenever comments of this character appear to educate the editor or writer by inviting him to their store and demonstrate the remarkable development and merits of the modern talking machine for his benefit. Thus they can make him "eat the leek," as the Bard of Avon puts it.

GIVE EXCELLENT PUBLICITY.

Grinnell Bros., Detroit, Fit Up "Victrola Hall" and Give Noon Hour Concert Daily.

(Special to The Talking Machine World.)
Detroit, Mich., Dec. 6, 1909.

Grinnell Bros. have adopted a unique method to advertise the Victrola. They have fitted up a hall in the basement of their store that they have named "Victrola," and every noon between the hours of 11.30 and 1.30 o'clock they give a concert for the benefit of those desiring to hear good music. The hall is the best arranged of any similar place between New York and Chicago, the management of Grinnell Bros. say, and every effort is made by those in charge of the Victrola entertainment to give the audience a first-class concert every day.

Talking machine stores have not enjoyed as large a business this fall as other lines in the music field.

"Our wholesale business has been unusually good all fall, but our retail business up to a week ago has been poor," says K. M. Johns, the local manager of the Columbia Phonograph Co. "Last week the retail business began picking up, and it now looks as though we were going to have our usual holiday rush. We have on exhibition two new styles of the Grafonolas, and we expect the third style any day now."

SOUSA RENEWS CONTRACT

With Victor Talking Machine Co. for the Making of Disc Records.

John Philip Sousa, whose band for the last nine years has made records exclusively for the Victor Talking Machine Co., has just renewed the agreement giving the Victor Co. the exclusive services of Sousa's Band for making disc records. Sousa's band records have always enjoyed large sales, and both parties to the agreement are to be congratulated on its renewal.

Amberola

The Newest Edison

A beautiful piece of furniture, a wonderful musical instrument—a Phonograph with the horn built in as a part of the cabinet.

Many a good sale has been lost by offering the customer something that cost less than he wanted to spend—by simply not giving him credit for wanting to buy the best.

The Amberola takes care of this class of customers for you—and besides its presence in your stores raises the standard of your stock in the appreciation of *all* your prospective customers.

As a Record "salesman" you'll find the Amberola the best investment you ever made.

Write your jobber to-day.

National Phonograph Company, 59 Lakeside Ave., Orange, N. J.

What SLEZAK Means to You

We are featuring Slezak in all our double page magazine advertising, and in the 416 newspapers, in which we are advertising, throughout the United States, reaching 55,000,000 people—your own prospects and customers—and stirring up bigger interest in Grand Opera than has ever been shown before.

Many dealers look upon Grand Opera as the slow end of the business. Some dealers are stocked up with Grand Opera Records that they can't unload. That is just what these new Slezak Records are going to take care of. And not *only* that—they are going to raise the standard of musical appreciation so that in boosting your sales on these higher priced records they will make your business more profitable than ever before.

Among the other great Grand Opera singers, who have sung and are singing for the Edison, are Constantino, the Spanish tenor; Riccardo Martin, the great American tenor; Antonio Scotti, the famous baritone; Mme. Rappold, the Wagnerian soprano; Blanche Arral, the coloratura soprano, and Mme. Agostinelli.

We are certainly doing our part in this big Grand Opera campaign—and it's largely in your interest. We hope that you'll do your part. Order Slezak Records from your jobber to-day.

National Phonograph Company, 59 Lakeside Avenue, Orange, N. J.

WITH THE CLEVELAND TRADE.

Business Much Improved Over Past Couple of Years and Dealers Consequently Pleased —Demand for Higher Priced Outfits— Personal Notes of Interest—Business Outfits for Railroad Offices—What Dealers Have Report.

(Special to The Talking Machine World.)

Cleveland, O., Dec. 9, 1909.

There is a marked contrast between the conditions prevailing at present and those which obtained one and two years ago. While business has been less active than was expected, owing to unseasonable weather, most of the talking machine dealers express themselves very well satisfied, and all expect a good holiday trade.

Improvement in the retail trade is reflected in the wholesale business, which has been increasing steadily during the month, and jobbers have in some instances been unable to meet the demand, especially for the latest models of machines, as well as for some of the more popular records.

Demand is more marked for the higher priced machines and records, showing a growing partiality for grand opera music obtainable at will by the affluent. The return to the normal stage in the general industries of all kinds is replenishing the pockets of the industrial class, and they are increasingly renewing their acquaintance with the dealers, exchanging old for new machines and buying both new machines and records.

J. F. Collins, traveling representative of the Zonophone records, was a visitor to the city Nov. 29, "on speaking terms" with the dealers generally, but more especially with the Universal Talking Machine Co.'s distributers, the Bailey Co. He said he was well pleased with the business situation and the good outlook.

Sam Goldsmith, central territory manager of traveling salesmen of the Victor Talking Machine Co., was in the city Nov. 26. A visit to the various dealers satisfied him they were working in harmony with the manufacturers' efforts to push business.

The phonograph as an accompaniment of the photograph is becoming increasingly popular and their uses are being multiplied indefinitely. Their coexistence is assurance that posterity will know this age better than we know any age of the past. We have had bequeathed to us written words and sculptured monuments, but we will bequeath living pictures of ourselves, moving pictures of our deeds and the very expression of our voices.

Albert L. Irish, of Toledo, who, it will be remembered, engaged in the manufacture of talking machines in that city a few years ago and who by reason of infringement was compelled by decision of the Supreme Court of the United States to retire from the talking machine business, with a personal loss of $300,000, his entire fortune, has re-entered the real estate business. Recently the president of the Broadway Bank of Toledo was indicted for embezzlement and misapplication of funds, and Irish is under indictment for abetting him.

Aside from his duties as editor and publisher of "the best Republican newspaper in Eastern Cuyahoga County," Frank A. Bowman, of Collinwood, Cleveland's largest suburban city, he not only draws pleasure but profit as well from the talking machine. In his printing office, at 808 Collamer street, he devotes a large space to the display of Columbia graphophones and records, where he enjoys, with his customers, demonstrations of all the latest productions. The music-loving citizens of the town afford him an excellent patronage.

Avery & Bemis, jewelers and opticians, in the nearby town of Amherst, also make a specialty of talking machines and are doing a fine business. They handle the Victor line of goods.

At the talking machine store of the W. J. Roberts, Jr., Co. trade is reported very satisfactory. Manager Audley V. Biesinger says: "We have been compelled to engage additional assistants in our demonstration rooms. The demand for machines, the Victrola and Victor No. 5, with wooden horns, being headliners, is good and increasing, while our record sales are fine. We have booked big orders for Christmas delivery on that occasion. Cabinet sales are especially good and we are selling a great many complete outfits, machines, cabinets and records. We have just put out a twelve-page booklet, illustrated with cuts of our show, demonstration and testing and tuning rooms, with text demonstrating the talking machine as a musical instrument of the highest order, together with a special talk on the desirability of testing and tuning, and the importance of the sound box."

The Lewis-Welsh Piano Co., No. 5870 Euclid avenue, conduct a talking machine department in connection with their piano trade and are building up a substantial business in this line.

The Lake Shore & Michigan Southern Railway Co. has decided to install in its offices up-to-date business equipments, and have just placed a large order for Dictaphones for the entire system from Buffalo to Chicago. The contract was made through George J. Probeck, local manager of the Dictaphone Co. of America, who has also equipped a number of other concerns, the largest being twelve mchines for the R. G. Dun Mercantile Agency.

The Eclipse Musical Co. are busy these days. "We are constantly receiving orders," said Mr. Towell, "from the surrounding country in such volume as to show a very healthy state of the trade, which also prevails in the city, judging from the local demand."

At the store of the George J. Probeck Co.—the Columbia headquarters—there is always a large degree of activity in both retail and whole-

THE BUSINESS PHONOGRAPH is coming into wider usage every day, in businesses of every size and character, in all parts of the country, on account of its convenience to both dictator and transcriber and because it reduces the cost of letter writing 50 per cent. or more.

We want one Edison Dealer in every city not now covered to handle the Edison Business Phonograph

Because the rapidity with which this great time and labor saving business appliance is coming into general use brings big profit to every man that handles it. **The whole business world is your market.**

The use of the Edison Business Phonograph on your own correspondence will convince you of its merits, as one of the greatest selling propositions you have ever handled. Besides, you will find it a big help to your regular Phonograph sales as giving an excellent demonstration of how records are made. Write to-day for full particulars and terms.

THE EDISON BUSINESS PHONOGRAPH COMPANY, 207 Lakeside Ave., Orange, N. J.

sale branches. As to the status of business, A. W. Robertson said: "The opening up of the holiday season this year is a little slow, due largely to adverse weather conditions. We have, however, many indications pointing to a large and active business. Inquiries are numerous regarding the 'Elite,' 'De Luxe' Grafonolas, as well as the new types of Columbia medium and lower priced machines. Both double disc and indestructible cylinder records are active and the demand is on the increase."

Manager Phil Dorn, of the Collister & Sayles talking machine department, jobbers and retailers in Victor goods exclusively, is gratified at the increasing demand for Victrolas, grand opera and the higher class records. He said the December records were the finest list yet produced and were selling well.

The fine display of Victor and Edison machines made by W. H. Buescher & Sons is daily attracting crowds to their store.

"While we could handle considerable more business than we are doing," said Mr. Robbins, of B. L. Robbins & Co., "still it is fair, and I am looking forward to a fine holiday trade. During the past month we made sales of several Victrolas and a number of lower priced machines, and are having many inquiries from people intending to purchase for holiday gifts."

The same report is made by Loretta H. Byrne, manager of the talking machine department of Brown Bros.

With their amplified facilities for exhibition and demonstrations, the talking machine and piano trade of the Bailey Co. is rapidly increasing to large proportions.

"Colder weather," said E. A. Friedlander, manager of the talking machine department, "would be better for trade, but notwithstanding, we are doing a fine business. During the past month we made sales of a number of Victrolas and other Victor machines, and Edison combination machines with Cygnet horns. Zonophones, with the wood horn, are proving very popular and good sellers. The new Caruso records are highly praised and are selling well. We have just engaged Sig. Olindo Marseglia, who will have charge and interpret demonstrations in Italian opera. He is a proficient musician and will add much to the attractions of our music departments."

E. McMillin said: "Business is fair in the talking machine department, principally for the higher grade goods."

Mr. Goodman, of the Goodman Piano Co., reports an active demand for Reginaphones and normal for talking machines, with good sales of records.

The new enterprise of Charles I. Davis is proving eminently successful. Miss Elsie Wicks, in charge of the talking machine department, said business had opened up in the most satisfactory manner, and that the sales of machines were good, with a fine and increasing demand for records. Mr. Davis claims to have installed the most complete Edison and Victor talking machine department in the city. The sheet music department, with continuous demonstrations, attracts crowds daily from morning until night.

NOBODY WINS BUT MR. HUSTLE.

Walk fast; don't loiter. A slow gait is an expensive luxury.

The enterprising business man to-day—the average type—may be abnormal from a physical standpoint, but he gets there. About him there is an indication of nervousness, yet he commands the salary and sticks to the job. And he talks with the characteristic speed that marks his walking. What business man cares to listen to a slow, drawling solicitor?

"I have never employed a man before seeing him walk on the sidewalk," said the active head of a big jobbing concern to me the other day. "No man who either slouches along or progresses leisurely during business hours is fit to go out after the business, nor is he fit to serve inside. It's a sign of that too general lack of interest in affairs.

"The man who walks briskly will talk to the point. He more likely is satisfied with the world and himself, more confident in his ability, and has more vim and stick-to-it-iveness. The plodder who goes at things slowly has been given the palm for ages. The man who was quick was considered unstable and hasty. Not so now. Times have changed. The plodder may get a chance to keep books, but he will never be able to get out and build up business in the face of strong competition.

"A man in my employ makes $300 a month, and he has been in the business only a year. I hired him for the reason that he seemed to be boiling over with life and enthusiasm. He says four words to the other fellow's one, yet he tells his little story to the prospective customer in one word to the other fellow's four. He gets orders while the other fellow is unpacking his samples."

The doctors have ever been up in arms against haste, says Modern Methods. But there is a difference between enthusiasm, speed and overexertion. The medical men admit this, but they insist that there is one time, anyway, when a man should be leisurely—that's meal time.

At other times the best maxim is, "Get somewhere!"

The country editor kept nagging at his new apprentice and finding fault with his work, until the criticism became wearisome.

Finally the worm turned.

"D'ye expect to get a second Hor'ce Greeley fer five plunkers a week?" he demanded, sarcastically. "If you do you are barking up the wrong sapling. I can't set type or sling ink with Ben Franklin or Hor'ce Greeley, not on my present recompense, but you make the salary six simoleons, cash down every Saturday night, and I'll pitch in and set the journalistic pinwheels a-buzzing in Punkinville and vicinity, even if I have to stay up seven nights a week to do it.

"There's my offer, blast yer stingy hide! And now if you don't get out a half-way decent journal hereafter, it is the fault of your own meanness!"

PHILADELPHIA, PA.

WITH THE INDIANAPOLIS TRADE.

Business During Past Few Months Very Good —Weather Interferes Somewhat with Sales —Wulschner-Stewart Co.'s Fine Talker Department—Victor and Edison Lines Handled —Columbia Co. Men Active—Mr. Devine's Experience—Pushing Grand Opera Records Successfully—Other Interesting "Talker" News of the Month.

(Special to The Talking Machine World.)

Indianapolis, Ind., Dec. 6, 1909.

The talking machine business in Indianapolis and Indiana for the last month has not been up to a very high standard. The wholesale business, generally speaking, was better than during the previous month, but to say that the wholesale business was good in November, it would be necessary to compare it with some very dull months. The greatest drawback on the trade probably has been the weather. Up to this time there have been few cold days in Indiana. Most of the days have been like spring days, and the dealers have found that the people are more anxious to listen to talking machines when they are compelled to sit around the fire at home during the winter nights.

The talking machine department is one of the most interesting departments of the new home of the Wulschner-Stewart Co., which has just been formally opened. It attracted the attention of the hundreds of guests who visited the handsome new home on the opening day. On that day three orchestras were used to furnish music and there was a profusion of flowers for the guests. The talking machines are arranged in the basement in five separate rooms, each opening into a long corridor. On the north of the corridor thousands of records are stacked away. The Wulschner-Stewart Co. handles Victors and Edisons. Mr. Souse, who has been in charge of this department for the company, has gone to Chicago, and Mr. Levy, late of the Lyon & Healy department, has taken up the work with the Wulschner-Stewart Co.

H. H. Myers, traveling representative for the Columbia Phonograph Co. in charge of northern Indiana, stopped off in Indianapolis last week. He reported heavy sales of the new Columbia four-minute machines, attachments and records.

The Columbia Co. here are giving hourly demonstrations of the new line of Grafonolas. The Grafonola Regent is attracting much attention because of its unique design and its exceptional tone quality. These machines are meeting with favor here for use in concerts and vaudeville houses.

Howard Crowe, traveling representative of the Indiana Phonograph Co., is getting ready to open up a talking machine store at Evansville. He expects to be associated in business with William Hollingsworth, who formerly was in the business at Evansville. It is the plan to have the new store opened in time for the best of the holiday trade.

"You never can tell just whom you are going to sell a talking machine to," said Thomas Devine, of the Columbia Co. To prove the truth of the statement, Mr. Devine told a little story, as follows: The other day he was playing a Grafonola for his own amusement. A man passing by heard the music through the transom and came in. He listened a short time and then asked Mr. Devine if the store would be open that night. Mr. Devine told him he would wait for him if he desired to look at the machine. About 10 o'clock that night the man drove up in an automobile, accompanied by some of his friends. To make a long story short, he bought the machine, which cost $225, and had it delivered at his home that night. It was impossible to get a dray, so the machine was delivered in an ordinary top buggy. "He didn't look like he had money, either," said Mr. Devine.

Mr. Devine, as a good Irishman, is jubilant over the fact that the Columbia Co. are handling the records of John McCormick, Irish grand opera tenor.

A talking machine was used in one of the acts at the Colonial Theater, the new vaudeville, house, during the opening week. The theater was well patronized.

One of the display windows of the Wulschner-Stewart Co. contains an elegant mission style Victrola.

The Musical Echo Co. are showing a beautiful Victor Victrola. This company also are pushing the Melba, Caruso and Tetrazinni records and advertising the fact that these singers sing only for the Victor.

The warm weather is proving a boon to the five-cent vaudeville houses and the penny arcades. While these places do a fair business all the week, their chief rush is on Saturday nights when the streets are thronged with people. Warm nights bring out the crowds.

The five-cent vaudeville houses are having no trouble now about keeping their places open on Sunday since their stand has been sustained by a court decision. Their contention was that the houses could remain open lawfully on Sunday provided a part of the proceeds was donated to charity. All of the charity organizations refused to take any of the proceeds, so the five-cent theater men organized a charity society of their own and have been getting along without molestation.

BALTIMORE DEALER MOVES.

D. J. Crowley, the well-known phonograph dealer of Baltimore, Md., has moved from 118 North Liberty street, that city, where he was located for several years, to larger quarters at 218 West Saratoga street. Mr. Crowley handles the Edison line and his normal stock consists of from eight to nine thousand records, as well as all styles of Edison machines.

SNELLENBERG & CO. ORDER COLUMBIAS.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 15, 1909.

N. Snellenberg & Co., the well-known department store of this city, recently placed a good-size order with the Columbia Phonograph Co., General, through the wholesale department.

(Special to The Talking Machine World.)
69 Basinghall Street, London, E. C.

By the time these lines appear the dawn of another year will not be far off, home and colonial traders will be mentally figuring up their profit and loss account, and speculating upon the prospects of the future. Those who have worked hard, shown enterprise in their methods of trading, and shown a sensible appreciation of the value of publicity, have the satisfaction of knowing their balance at the bank is on the right side, while on the other hand the timorous and dilatory methods or our dabble-in-everything dealer have brought them disaster and in a good many cases ruin. In these times of local trade depression and keen competition, the man that does one thing, and that one thing well, is the man to win out through it all. The trend of talking machine conditions, in this country particularly, during the year, is evidence of confirmation, and from the great provincial centers my reports all go to show that a process of weeding out is having the beneficial result of causing trade to flow in surer channels toward prosperity and stability. A welcome sign, too, is shown by the fact that cycle traders now recognize the necessity of doing things thoroughly or not at all, and although I am not so sanguine of the future as to suppose that cycles will come to be regarded as a side line to talking machines, I am fully convinced that many of our cycle friends now look upon talking machines with more certainty as a commercial asset of great value.

Increased Amount of Talker Advertising.

Yet another welcome sign of recent years is the increased amount of newspaper and magazine publicity which some of the companies, notably the Gramophone, National Phonograph and Columbia put forth with more regularity and persistency. It's a great creating sales force, and dealers appreciate it as such by adopting local schemes calculated to double its value. Only this last week the Gramophone products were displayed in a treble-column space in a leading daily, while monthly lists of records are now frequently advertised in the chief provincial organs. The Edison goods, too, are brought under the notice of thousands of possible buyers, week by week, much to the dealers' advantage. The spirit of the times is progress all along the line.

London Trade Very Good.

Throughout London I find trade generally is on a sound footing, sales are good, and prospects of a booming December is apparent everywhere. Shops are donning their Christmas garb to attract the countless thousands who will want to buy new records or machines, and it is safe to assert that the year will close with expressions of satisfaction all around. In that regard I heartily wish all my readers a right merry and withal prosperous Christmastide and an even better New Year.

Popularity of the Twin Discs.

Several new discs have sustained a precarious existence during this year, but out of a number of failures—in a commercial sense—there stands forth one record which, although but fifteen months old, has made a great name for itself. I refer to the "Twin" double disc selling at half a crown. Wherever I go I find the Twins, who, unlike the human offspring, flood the world with peaceful harmony. The Twin is essentially a record of quality, not harsh or blatant, but of full and rich tonal volume, while only that which is best in the world of music is associated with its name. Some examples of the fine titles recorded I hope to publish next month, but in the meantime, if you want any popular ballads, topical hits, selections from the current musical comedies, write the Twin Record Co., Christopher street, Finsbury, this city.

Annual Meeting of the Gramophone Co.

Presiding at the annual meeting of the Gramophone Co., Ltd., Trevor L. Williams said the accounts of trading (particulars of which I reported last month) showed a comparatively bad year. It was explained by the general trade depression and the greatly reduced profit in Russian territory. The business in England was sound and satisfactory. Competition in foreign countries had affected their profits by the manufacture of cheap records by mechanical means. The effect of this was very similar to what was the case in England in regard to sheet music when pirated cheap copies were largely sold in the streets. In Russia the reductions of their gross profits was serious, not because of any large decrease in actual sales, but principally through the wholesale mechanical copying of their records and the sale of those copies at any sort of price. The law of the land could not help them, and they had to spend a large sum of money to get rid of the mischief, despite the law. In Germany and elsewhere on the continent they could not contend with the prices put upon the cheaper machines and at the same time maintain their standard of excellence, which they did not propose to sacrifice. Upon the question of the trend of copyright legislation in European countries, Mr. Williams said that it was against the "record' trade, and they were therefore opposing any tendency in that direction. The shareholders were reminded that since the formation of the company nine years ago the directors had paid in dividends no less than 45 per cent. on the preference share issue and 160 per cent. on the ordinary shares, thus distributing in cash, less income tax, £845,000, which statement was received with great applause.

That Lange Successors Creditors Meeting.

I reported last month that a meeting of the creditors of H. Lange's Successors, Ltd., was to be held on November 5, when it was understood that a proposal for reconstruction would be submitted. The meeting, however, was nothing but a farce, and as to any question of reconstruction—the directors were as silent as the dead. It is true a certain statement was made by a solicitor on behalf of the Kaisers, but as will be seen hereafter, it proved to be most unsatisfactory. The meeting was convened by Messrs. Kaiser and Wilson, who had been appointed voluntary liquidators. A general statement of affairs was read out by the chairman (Mr. Wilson), who found it necessary to apologize to the meeting for his incomplete and unreliable figures. From the statement submitted I gather that the nominal capital of the company was £20,000. Only 7,050 shares were issued, made up as follows: 3,000 given to the vendor in part payment for the good will, received in cash, £3,932 10s., and £117 10s. owing by the late managing director, Karl Maurice. Of £4,447 1s. allowed to the vendors for the stock at cost price, only £731 14s. 9d. has been paid, and thus they stand as unsecured creditors for the balance. So far as can be ascertained the company's liabilities amount to nearly £10,000, apart from which there are other doubtful claims in respect of goods ordered (but not delivered) amounting to several thousand pounds sterling. The assets are estimated at about £7,305, of which £6,020 stands against the stock, at cost, consisting chiefly of talking machines. The majority of these machines are not made up, and we very much doubt whether they will fetch anything like this amount. For the seven-eight months the company have been in existence their trading account shows a loss of £5,000 odd. A large number of creditors were present, and considerable dis-

FROM OUR LONDON HEADQUARTERS—(Continued.)

satisfaction was manifest. Objection was taken to the lack of detail in the chairman's statement, and a creditor made a suggestion that their interests would best be protected under compulsory liquidation. On a resolution, however, that the liquidators appointed by the shareholders should be removed, Mr. Kaiser's solicitor rose to oppose. In the course of his remarks he made the extraordinary statement that under the present arrangement his clients had it in mind to offer part liquidation of the creditor's debts in shares in a new company, but—and here's the rub—if the present liquidators were removed, he had absolutely no proposal to make. Asked to make a definite offer, he said he was not prepared to, which, to say the least, is very remarkable. In the end Percy Mason was appointed liquidator by a majority of the creditors, in place of Messrs. Kaiser and Wilson. A committee of inspection, five in number, including Michael Kaiser, was appointed to act with Mr. Mason, after which the proceedings were rather hurriedly brought to a conclusion.

Death of Lionel Brough, Well-Known Actor.

I regret to announce the death of Lionel Brough, the renowned actor, who passed over on November 8 last, mourned by all who knew him. His popularity was gained not alone on the stage, for we find that no less than six Gramophone records remain to preserve forever the voice which has amused countless thousands of the present generation, as it will thousands in the generation to come. The titles comprise some of his best and most enjoyable stories, faithfully recorded, and are as follows: "A Curate Story," "Triplets," and "Dogs in Church," "A Christian Science Story," "Limberger Cheese," "The Pigeon Story," and "First Sunday After Ascot," "Sampling Beer" and "Cut 'isself Shavin'." Two other good records he made were "Sea Story" and "A Lancashire Story" on Edison-Bell cylinders. A big demand has set in for these records, and dealers would be well advised to make a special showing of them.

Gramophone Co. Discontinues Victor Model.

The Gramophone Co. advise me that their cheapest model for the season is the "Intermediate Monarch" selling at £4 10s. The Victor model has been discontinued.

No Record Piracy in England.

Referring to the statement of the chairman, made at the recent annual meeting of the Gramophone Co., Ltd., as to the wholesale mechanical copying of their records in Russia, our esteemed contemporary, the London Music Trades Review has this to say: "It is somewhat curious to find that our statement to the effect that piracy in the talking machine trade is rife is being corroborated in spite of the emphatic denial in certain quarters. . . . We do not often blow our own trumpets, still, if you see it in the M. T. R., it is so." To make such a statement, in a paper circulating mainly in Great Britain, and without qualifying that statement with the name of the country referred to by the chairman, i. e., Russia, is likely to cause a misconception in the minds of possible investors, and give them a wrong idea of conditions in this country, apart from any other considerations. The emphatic denial, too, was made in this paper, and I repeat that record piracy in England is practically non-existent. I therefore feel called upon to correct my friends in this matter, and trust they will make good the omission at the earliest opportunity.

Gramophone Co.'s Fine Offerings.

Dealers in Gramophones have every reason to be proud not only of the product but of association with a company that fosters and promotes trade in all directions and by every available means. No expense is spared to create sales for the dealer, as witness the generous amount of daily newspaper magazine advertising space which the Gramophone Co.'s announcements occupy, to bring home to the public the merits of their goods. And then, too, they are supplied with the right goods at the right time. Record issues are always up to date, and particularly seasonable are the latest selections of dance music by the famous Iff's Orchestra. There is included in this list excerpts from the current musical comedies, quadrilles, waltzes, reels, lancers, etc. In the ordinary monthly (December) list the following titles figure: "The Coon's Patrol," "The March of the Giants" and "Trafalgar March," by the Band of H. M. Coldstream Guards; "Hunting Scene," by the Black Diamonds Band; "Bells of Dawn," by the Metropolitan Orchestra, who also give us "The Phantom Brigade"; gems from "Our Miss Gibbs," Bohemian Orchestra; "The Ribbon, the Ring, and the Rose," and "I Dreamt of You," by John Harrison; "Hearts of Oak," Robert Radford; "The Enchantress," Miss Edna Thornton; "Arioso," Mme. Jones-Hudson; "It Was a Lover and His Lass," duet by Miss Perceval Allen and John Harrison; "When the Budding Bloom" (Sullivan), quartet, Miss Perceval Allen, Miss Alice Lakin, John Harrison and Robert Radford; "The Bounding Bounder," Harry Lauder; "John Bull's Budget Song," Arthur Gilbert, and "Ungarische Weisen," violin solo, by J. Szigeti.

Imported Goods Must Show Country of Origin.

The text has been issued of the Merchandise Marks Bill introduced in the House of Commons by Staveley Hill. It proposes to amend the act of 1887 in two respects. As the law now stands it is permissible to apply to a foreign article the subject of an expired British patent, the name by which the patented article became known, without any qualification as to the country of origin. A patented article is frequently described by the name of its inventor, and if the inventor be a British subject the name as applied to the article becomes distinctive of British manufacture or production. It is sought by the bill to prevent the "passing off" of foreign goods as British by requiring that where there is applied to such goods the name by which a patented article has become known, such name shall be accompanied by a definite and prominent indication of the foreign origin thereof. The effect

would not be to limit the rights of the world in connection with the expired patent or the name by which it was known, but merely to protect the purchaser against possible fraud or misapprehension as to the country in which the article has been manufactured. The sixteenth section of the Merchandise Marks Act, 1887, provides that imported goods bearing English trade marks or English words tending to show that they were made in the United Kingdom have to bear a definite indication of the country of origin. The Select Committee of 1897 reported that this gave a gratuitous advertisement to foreign trade competitors and had done great harm. It is sought to replace it by the more general indication "Not British" intertwined and interlaced so as to avoid erasure of the word "Not," as recommended by the Chambers of Commerce and Manufactures and the Federated Trades Council.

New Premier Manufacturing Co. Records.

Great things are reported by the Premier Manufacturing Co., business having picked up so well that some very special issues of the two-and-a-half and five-minute "Ebonoid" discs are promised during December, in addition to which the usual issues of the standard cylinders will be made. Some recent impressions of the latter, just to hand are the following: "I Can Picture Polly," by S. Kirkby; "The Girl in the Clogs and Shawl," "I Must Go Home To-night," and "Let's All Go Down the Strand," by Harry Fay; "You Don't Want to Keep on Showing It," by Charles Denton; "Do You Want to Buy any Lavender?" and "When Love Comes Knocking at the Door," both by Frank Miller; and "Two-Step Topeka," by the Premier Bijou Orchestra.

Telegraphing Pictures from New York.

In a lecture before the Royal Society of Arts, Thorne Baker said that Professor Korn was likely to find a practical solution of sending photographs by ordinary cable across the Atlantic, while he himself was endeavoring to perfect a wireless system for the same purpose. It had already given promising results in the laboratory.

Another Hornless Gramophone.

The latest development in the above direction is the introduction of a new model of the "Pigmy" type to give an improved rendering of 12-inch records. It is a beautiful machine and is described as being fitted with a double spring motor, 12-inch turntable, speed indicator, exhibition sound box, large taper arm, screw winding key, etc., while the massive fumed oak cabinet, with curved top and beveled edges makes an imposing piece of work. The retail price is 8 guineas, or in case complete, £10 3s. 6d.

Prosperity Evident in Australia.

The prosperous condition of things in the Australian market is evidenced by the fact that the National Phonograph Co. of Australia, Ltd., have found it necessary to make arrangements for the erection of a building large enough to permit of their transacting the business entirely under one roof. At present the company utilize no less than four separate warehouses.

National Co.'s Xmas Record List a Wonder.

Absolutely *the* Christmas list of cylinder records is that issued by the National Phonograph Co. The Amberol impressions are, of course, the best, but of "Standard" records there is an unlimited variety of titles appropriate to the festive season. It would be useless to itemize each record now, owing to the date of issue of this publication, but I am fortunately in a position to go one better and place before my readers a full selection of the titles for January, which will be issued to the trade on or about the 15th of that month. As will be seen the Edison record caters for everybody's taste in music or songs, while the artistes are, for the most part, drawn from the ranks of those only who have made a name in the people's estimation. Here is the list of Amberol titles: 12119, "The Bounding Sea" (Lauder and King), Harry Lauder; 12120, "Morning, Noon and Night in Vienna" (Suppé), and 12128, "Gems of England" (arranged by Basquit), National Military Band; 12121, "The Light of Day" ("The Blind Boy's Song") (Ainslow and Martin), Herbert Payne; 12122, "Pull Yourselves Together, Girls" (Castling and Murphy), Miss Florrie Forde; 12123, "The Dollar Princess," waltz (Fall-Keifert), Alhambra Orchestra; 12124, "Since Poor Grandfather Died" (Curran), George Formby; 12125, "The White Squall" (Barker), Peter Dawson; 12126, "Do You Want to Buy any Lavender?" (Hyde and Long), Miss Ella Relford; 12127, "A Tale of Paris" (Godfrey and D'Albert), Billy Williams; 12129, "A Diovent Knah" (J. C. Scatter), J. C. Scatter; 12130, "Jack and Georgie at the Smoking Concert" (Foster and Warrington), Eric Forster and Ernest Warrington; 325, "Washington Post" and "The High School Cadets March" (Sousa), Sousa's Band; 327, "Annie Laurie" and "Home, Sweet Home" (a bell solo), John F. Burckhardt; 329, "The Bird with the Broken Wing" (Beveridge), Edison Mixed Quartet; 331, "When You Were Sweet Sixteen" (Thornton), Manuel Romaine; 332, "Gobble Duet" from "The Mascot" (Audran), Miss Elizabeth Wheeler and Harry Anthony; 333, "Monte Cristo Waltz" (Katlar), Jorda-Rocabruna Instrumental Quintet; 336, "Pique Dame Overture" (Suppé), Edison Concert Band; 338, "Flow Gently, Sweet Afton" (Spilman), Metropolitan Quartet; 341, "Lead Kindly Light" (Dykes), Knickerbocker Quartet; 343, "Emmaline" (Jerome and Schwartz), Miss Ada Jones and Billy Murray; and 344, "Maria Theresa March" (J. F. Wagner, United States Marine Band.

Standard Records—13917, "I Must Go Home To-night" (Hargreaves), Billy Williams; 13918, "I've Loved Her Ever Since She Was a Baby" (Lauder and Beaton), Harry Lauder; 13919, "Baden Powell's Scouts March" (Barrett-Seymour), National Military Band; 13920, "I Can Picture Polly" (Rule & Pelham), Miss Rosie Elliott; 13921, "Thistledown Schottische" (Ostlere), Alex. Prince; 13922, "Come Up in My Balloon," Arthur Osmond; 13923, "I Do Like to Be Beside the Seaside" (Glover-Kind), Harry Fay; 13924, "Mary's Ticket" (Wells and Long), Miss Florrie Forde; 13925, "Nelly Bly" (Rick and Formby), George Formby; 13926, "Scotch Country Dances," National Military Band; 10277, "The Summer Girl" (Sousa), Sousa's Band; 10278, "It's Hard to Find a Real Nice Man" (Sherman), Miss Bessie Wynn; 10282, "From Greenland's Icy Mountains" (Mason), Edison Mixed Quartet; 10284, "Medley of Irish Reels," John Kimmble; 10285, "Eiley Riley" (Hubbell), Miss Ada Jones; 10287, "I Wonder Who's Kissing Her Now" (Howard), Manuel Romain; 10290, "Meet Me To-night in Dreamland" (Friedman), Miss Elizabeth Wheeler and Harry Anthony; 10292, "The Portly Major March" (Rolfe), American Symphony Orchestra; 10294, "Wedding Bells" (Helf), Premier Quartet; and 10296, "Kaiser Friedrich March" (Friedemann), United States Marine Band.

An Important Consolidation.

An important trade amalgamation was announced last month between the Columbia Phonograph Co., General, and the Rena Manufacturing Co., in consequence of which the Rena disc machines and Columbia double records have been discontinued. The selling lines now on the market are Columbia disc and cylinder machines and Columbia single discs, in addition to which the Rena double-face discs, 10 and 12-inch, stand as before. Louis Sterling has been appointed British manager of the Columbia Phonograph Co., General, whose city offices and showrooms are now located at 27 Worship St., E. C. The beneficial effects of this amalgamation are likely

LOUIS STERLING, BRITISH MANAGER OF THE COLUMBIA PHONOGRAPH CO., GENERAL.

The
STROH VIOLIN

¶A new instrument possessing a VIOLIN TONE of great beauty and remarkable power, which will appeal to all music lovers.

¶The Stroh Violin being scientifically constructed will withstand the varied temperatures of the tropics, where the ordinary violin is useless.

¶Musical Instrument Dealers and others interested should write for free descriptive booklet to the Sole Maker.

GEO. EVANS

(Successor to CHAS. STROH)

94 Albany St., Regents Park, London, Eng

FROM OUR LONDON HEADQUARTERS—(Continued).

to be felt in many directions, notably that of lessening competition in the trade, which is already overcrowded, and producing greater stability and confidence. Mr. Sterling is naturally proud of his new charges, and enthusiastically descants upon the qualities and good points of the various Columbia goods. They are too well known for me to particularize upon them here; suffice it to say that the splendid reputation achieved by the Rena and Columbia products is certain to be enhanced under the enterprising and able guidance of our old friend, Mr. Sterling. And if any confirmation of this was wanted we have only to glance at the company's record lists, in which intelligent anticipation is apparent, inasmuch as if you don't see it in the Columbia list it's not worth seeing at all. The December impression is teeming with good things, coming pantomime hits, Christmas titles and other up-to-date selections, which should prove good sellers.

New Edison Bell and Sterling Records.

A big list of Edison-Bell and Sterling cylinders, and Edison-Bell disc records, reaches me from J. E. Hough, Ltd., of Peckham. The lists are replete with titles suitable for Christmas use, classical, sentimental, comic and other selections, and I notice that there is a very fair sprinkling of the good old popular ballads which are always in demand. Topical and coming pantomime hits are also well represented. Such comprehensive and varied lists of titles should be in the hands of all up-to-date dealers.

The Cash-on-Delivery Parcel Service.

In a recent report the Postmaster-General of Egypt reminds traders that they should make more use of the cash-on-delivery parcel service which was established last year between that country and Great Britain. A similar service exists between Egypt and most European countries.

"Twin" Records for January.

The "Twin" list for January, containing the usual goodly fare, is already in the hands of traders.

An Interesting Legal Case.

A recent court case of much interest to employers was adjourned for consideration by Judge Rentoul, K.C. The facts briefly were these: Plaintiff was employed by defendant to obtain orders on a commission basis. The agency was terminated after two years, and plaintiff now urged that he was entitled to be paid commissions on orders which came in after he left, because they were obtained by his influence. Counsel for defendant said that it amounted to this, that the plaintiff was entitled to a pension for life. Such a proposal was unreasonable in the great city of London, and if encouraged would spell ruin to any business house.

Quicker Transatlantic Mails.

After January 1 and during the remainder of the winter season, the Cunard mail steamers leaving New York on Wednesdays will sail direct from that port to Fishguard, omitting the call at Queenstown.

The Beka Co.'s Excellent Xmas List.

Teeming with a fine selection of the old favorite carols, hymns, and such like, is the current Beka (Christmas) list just issued. Other impressions worth noting are "Pantomime Hits" Nos. 1 and 2 (Beka London Orchestra) which introduces snatches from all the latest popular songs; "Manuela" intermezzo two-step, and "Carolina Brown," by the Beka London Orchestra; "There's a King in the Land" from "The King of Cardonia," and "Mighty Mother of England," both well sung by Harry Thornton; "There's a Green Hill Far Away," by Harry Thornton, with "O Rest in the Lord" (Elijah), by Miss Jessie Broughton on the reverse side; "Lovely Night" and "The Long Day Closes," by Messrs. Virgo, Pembroke, Thornton and Pringle; "Levinsky Solving the Riddle" and "Serenade Medley" by the Big Four, quartet; "The Girl in Clogs and Shawl" and "Let's All Go Down the Strand," by Bert Alvey (comic); and last, but not least, is the issue of a 12-inch Meister record containing "The Prologue from Pagliacci" by Harry Thornton, and "On with the Motley" from "Pagliacci," by G. Wigley, who by the way is rapidly making a big name as a tenor of the first water. There are other good titles in this list which altogether is an exceptionally good one.

Amberolas on Market by Dec. 15.

The National Phonograph Co. have announced to the trade that their new "Amberola" machine (which was fully described in a previous issue of The World), will be placed on the British market about December 15. An interior horn, cabinet phonograph is, to say the least, original, and for such instrument there has been an undoubted want. It will appeal, of course, only to the upper ten, but for all that a fair demand may be expected. In a later issue I shall no doubt be in a position to discuss this matter more fully.

The Holiday Zonophone Records.

One of the best Christmas lists of records is that issued by the Zonophone Co. It includes the usual Christmassy titles, favorite ballads and other selections, of which the following are good examples: 13th, grand opera record, trio from the last scene of "Faust" (Gounod), by Miss A. Yarrow, Messrs. Ernest Pike and Peter Dawson; "Abide with Me," 12-inch, beautifully rendered by Madame Edna Thornton (of Covent Garden opera), who appears for the first time on Zonophone records; "Little Empty Stockings," by mixed quintets; "The Mill Wheel," Peter Dawson and male quartet; "Lo, Hear the Gentle Lark" (soprano solo with double flute obligato), excellently rendered by Olga, Elga and Eli Hudson; while our old friend, Harry Lauder, sang "The Bounding Bounder," which he left with the Zonophone Co. as a legacy before departing on his American trip.

Agency for the Favorite Records.

The following circular letter, which is sufficiently self-explanatory, has been issued to the trade from 45 City Road, London:

Dear Sir—I beg to inform you that the agreement between Schallplattenfabrik "Favorite" with H. Lange's Successors, Ltd. (now in liquidation) for the sole selling rights of Favorite records in Great Britain and Ireland, together with the British colonies, has been terminated by the manufacturers, and I have been appointed as London manager for Schallplattenfabrik "Favorite" (Favorite Record Co.), 45 City Road, E. C., for the same places. I take advantage of this opportunity of informing you that my company is prepared to execute any remainders of orders which Messrs. Lange's have not carried out, provided, of course, they are at rates acceptable to my company. If there is a balance of Favorite records still to be supplied to you, and if you will kindly give me particulars, I shall be happy to give your wishes my immediate attention, and submit to you our terms for executing the same. Assuring you at all times of my personal attention, I am, Dear Sir, faithfully yours, SCHALLPLATTENFABRIK, "FAVORITE," (The Favorite Record Co.),

Albert F. Vischer, London Manager.

Interviewed by your correspondent, Mr. Vischer asks me to make known through the columns of The Talking Machine World that he has now a full and complete list, including up-to-date titles, ready for despatch, and that he is prepared to fill all orders not executed by Lange's Successors. The Favorite record is one of the best on this market, and in view of the greatly strengthened repertoire promised under the new regime in conjunction with an assurance of quick deliveries, dealers are justified in placing their orders forthwith.

Krebs & Klenk Also Give Notice.

A similar circular to the foregoing has also been sent out by Henry E. Heyder on behalf of Krebs & Klenk, the manufacturers and patentees of the Klingsor machines. Here again, orders unexecuted by Lange's will receive prompt attention upon particulars being furnished to Mr. Heyder at 45 City Road this city. Will all Klingsor traders—in any part of the world—please take note?

Odeon Co.'s McCormack Records.

It may not be generally known that John McCormack, the famous Covent Garden tenor, who has just recently made a stir in American musical circles, has recorded a number of his splendid selections for the Odeon Co., who hold the exclusive rights of reproducing his voice. The records are wonderfully natural, full in tonal quality, and have achieved enormous success on this side of the water. Foreign and colonial dealers are now offered a line of records which must appeal to all music lovers, and particulars should be sought from Barnett Samuel & Sons, Ltd., of Worship street, London.

Premier Mfg. Co. Cutting Out Titles.

The Premier Mfg. Co., Ltd., have sent the following letter to the trade: "Gentlemen—We beg to advise you that we are cutting titles mentioned hereunder out of the catalog, being of the opinion that our present product is so much in advance in quality that it does not justify us supplying these numbers any longer. Those titles which we consider are sufficiently popular are being remade and will be reissued again at a very early date. 342, "Cinderella"; 338, "Ciribiribin Waltz"; 344, "Take a Pair of Sparkling Eyes"; 345, "Save a Little One for Me"; 347, "Sweet Adeline"; 231, "The Old Rustic Bridge"; 281, "If I Could Plant a Tiny Seed of Love"; 307, "Noontide"; 35, 'In Happy Moments"; 37, "The Heart Bowed Down"; 91, "The Coons Talk"; 134, "Mary"; 21, "The Whippoor Will"; 77, "Dat's the Way You Live and Die"; 82, "Soon I'm Leaving Dublin Town"; 54, "When the Hills Are White with Heather"; 230, "Baby's Picture." Your kind attention to the above when ordering future goods will oblige."

Comments on Provincial Trade.

Owing to several trade-disturbing elements, talking machine business up North is far from satisfactory, and dealers' sales are very little, if any, in advance of same time last year. Yet the characteristics of our north country traders—their optimism and cheerfulness—are assets which will eventually help them over the stile to the fields of prosperity. They are workers and no mistake, and we can admire them all the more since they put up a good fight against such discouragements and loss of trade as results from the continued slackness in the cotton trade industry, for instance. In Manchester and other great cotton mill centers thereabout it is reported that looms are stopped in all directions, and that stoppages on a larger scale will take place before long. Other factories are working short time, and in consequence there is no surplus of spending money with the classes that talking machine and record dealers mainly rely upon. It is all the more unfortunate because, with the majority of English dealers, the month of December, above all others, is their bon temps, so to speak. As a dealer acquaintance said to me recently, "If we don't make money in December there is usually no balance worth speaking of at the end of the season." Whatever may be the condition of things, however, up North, I am fully convinced that the enterprising dealer can largely mitigate the evils of local trade depression by hard work and original methods in operating and extending his connections further afield. Coming South we find trade is much more flourishing in the Midlands, where, as will be seen by the following letter, a gradual weeding-out process is going on among dealers, a condition of things beneficial to factor and legitimate dealer alike. Frank S. Whitworth, manager of the Colmore Depot, Birmingham, writes me as follows:

"We are, of course, now in the very thick of the season, with trade increasing by leaps and bounds as the Christmas season approaches. Whatever may be the experience elsewhere, we are ourselves extremely gratified to find that each week shows an increase on the weeks of preceding years, the fact being that compensating influences are at work by which, though many of the other dealers is becoming more solid and

dealers are giving up the business, yet trade is regular, and, of course, the surviving dealers are those who have done the thing in the best style, and have always formed the backbone of the trade. We do not think any of that class of dealer is having much to complain about.

"The same trend of events is indicated at the other end of the trade, the smaller manufacturers, or, rather, the manufacturers of the lesser-known machines and records, have not done so well, but makers of what might be called the staple lines, should not, if our experience goes for anything, have anything to grumble about.

"Our sales on Edisons are very satisfactory, while the Amberol trade has grown enormously since last year. On the disc side the increased demand for Twins has been phenomenal, and this has not been in the least at the expense of its elder brother, the Zonophone; Zonophone machines and records are still as popular as ever.

"To sum up, we are glad to find that the trade seems to be settling more into a consistently even business, perhaps, with fewer handling it but with more regular profits for all concerned, manufacturer, factor and dealer, and with fewer alarms and excursions to excite and disturb."

UPHOLDS PATENT AGREEMENT.

German Supreme Court Hands Down Decision in Favor of American Concern and Orders Revoked Patent Renewed.

The Imperial Supreme Court in Leipsic on November 26 rendered a decision in a patent case in which it interpreted the patent agreement between Germany and the United States in favor of an American company, which has a branch office in Berlin.

This branch office secured letters patent under the German law on an invention, but it failed to place the invention on the market within three years, the time specified by the German statute for so doing. Thereupon a German brought suit to vacate the patent rights, and the Patent Office decided in his favor. The American firm, however, took an appeal to the Imperial Supreme Court, and while awaiting a decision transferred the patent rights to its parent company in the United States.

The decision of the court declared that the Patent Office had wrongfully revoked the letters of patent and must renew them, as the German-American agreement guaranteed reciprocal treatment of patents.

* * *

The German-American patent agreement was signed at Washington February 23 of this year by Secretary of State Bacon and Count von Bernstorff, the German Ambassador, and, having been duly ratified by the House of Representatives and the German Reichstag, was promulgated simultaneously August 1 by President Taft and the Kaiser. It became effective immed.ately.

Under the convention American manufacturers were relieved of the requirement of the German law that in order to sell their products in Germany they must manufacture them upon the basis of patents in Germany, which called for the investment of large sums of money in maintaining duplicate plants. American inventors also were relieved by the agreement from the German restriction which declared patents forfeited if not actually worked in Germany within three years after letters of patent were granted.

PRESERVING THE INDIAN TONGUE.

The Songs, Legends and Ancient Traditions of the Race Being Preserved by Miss Densmore Under the Auspices of the Bureau of American Ethnology—Uses the Columbia Graphophone in Her Work—Records of Noted Indian Chief Are Interesting.

Out in the western country, where a few of the old Indians are still to be found in their aboriginal state, the Columbia graphophone is playing an important part in one of the most interesting and valuable scientific movements of the present day. This is no less than recording and preserving in an enduring form, the music of the American Indian.

INDIAN CHIEF IN FULL REGALIA.

The Bureau of American Ethnology—a branch of the Smithsonian Institution at Washington— is its sponsor, and executing the work is Miss Frances Densmore, a musician of many attainments and a woman of capability and unfaltering resolution, ideally fitted for the work by her scientific knowledge of the music of primitive tribes and races.

The Columbia cylinder grapnophone, with its recording apparatus, was chosen by Miss Densmore as one well fitted for recording of such delicacy as this, the difficulty of which will be described later.

Realizing that it is only a very short time before the original characteristic songs of the

OJIBWA, A CHIPPEWA CHIEF, MAKING A RECORD.

American Indian will be lost forever, through the gradual dying out of the old members of the tribes—men in whom are still preserved the ancient traditions of the race, and that some well-defined steps should be taken for preserving and perpetuating these songs, the Bureau of Ethnology instituted the present movement, leaving the executive part of the work entirely in Miss Densmore's hands.

It was not an easy task, as may be imagined. The American Red Man is an uncertain quantity. He has no great love for the devices of the white man, and with some reason. Much diplomacy and ingenuity were therefore necessary, and these are exactly the qualities that Miss Densmore brought to the work. She went out to the reservations and studied the situation at close range, familiarizing herself with the language, customs and racial peculiarities, winning the confidence of the Indians and finally effecting the main object of the work, with the result that more than 400 graphophone records have so far been made, from which the songs and melodies are transcribed. Miss Densmore, who is scientifically trained in the theory and practice of music, and who went to the study of Indian music from the giving of lectures on the Wagnerian drama and the study of Brahms under one of the greatest living teachers of that master, does the transcribing herself.

Details of unusual interest are revealed in Miss Densmore's account of her work. Some of the most valuable records have been made by an old and celebrated Chippewa Indian, named Ojibwa, 89 years of age, who is said to be the last great warrior of the Chippewa and is the only surviving leader of the wars between that tribe and the Sioux. Many of the songs sung by this old warrior are probably known to him alone of all the Indians now living. More than fifty of Miss Densmore's records were made by him. The entire collection of records is now the property of the Bureau of Ethnology at Washington.

Accompanying this sketch are illustrations from two photographs of the old warrior, one showing him seated in front of the horn of the Columbia graphophone, during the making of a record, the other in full regalia as in the days when he used to strike out upon the war-path. To say that Ojibwa is blind and that this picture was secured only by taking him five miles by stage-coach and twenty-five miles by rail, is mentioning only one of the difficulties Miss Densmore has found and successfully combated.

As the work must, to a very great extent, be carried on with people whose voices have been weakened by age, it will readily be seen how important it is that the recording apparatus be most sensitive. In this connection, it is gratifying to note the excellent results reported by Miss Densmore in her use of the Columbia graphophone and Columbia recording process.

THE VICTOR CHRISTMAS POSTER.

The Victor Talking Machine Co. have sent their handsome holiday poster for the use of dealers. The poster is sixty inches long and twenty inches wide and shows the Victor artists, bandmaster, negro minstrel, Spanish, French and Italian singers, choir-boys and a violinist issuing from the horn of a Victor machine held in the arms of Santa Claus. The text reads, "Come in and hear the Victor. The best Christmas gift on earth." The color effects in the poster are bound to attract attention.

TRADE IN THE QUAKER CITY.

Business for Closing Months of Year Proves Very Satisfactory to Dealers—Worried Over Threatened Shortage of Goods—Jobbers Blamed by Dealers—Lecture Recitals at Wanamakers Prove Strong Attraction—What the Various Houses Have to Report—Heppe & Son Divide Department—Interesting Personalities.

(Special to The Talking Machine World.)

Philadelphia, Pa., Dec. 8, 1909.

The last month of the old year has opened in a most satisfactory way for the talking machine people, and from every aspect of the trade there is only a bright side. The business in November was more than satisfactory, and the current month is expected to go the past month even some better. The only one dark cloud in the horizon is the fear that the men will not get all the goods they may need. They are getting assurances that they will be taken care of, and that there will be enough machines, cabinets, etc., to go around, but they are very slow reaching the jobbers, and stock which should have arrived here nearly a month ago is not yet on the way. Various excuses are made for this condition. The dealers claim the jobbers were late in ordering and that they were not justified in having a big stock on hand. They claim they called the attention of the jobbers already last summer to the advisability of placing their orders early. The jobbers admit this, naturally, but they claim that they are not exactly in a position to order goods several months ahead to any great extent, and have the collector come for his money in a few weeks, and they have to be without a big bulk for a number of months, with their heavy general expense going on just the same. The jobbers feel that the manufacturers should make sufficient stock during the dull season and keep it on hand when the busy season begins so that they will be able to supply all needs. They say the manufacturer has the place to store stock, he has the money and is better able to lay it out than the jobber. If he is not willing to do this, then the jobbers say why don't he sell us goods in the early fall, and date his bills the first of November or December when they will be getting in money to meet them.

Nothing in the way of advertising the talking machines has been more effective than the lecture recitals of the grand operas which have been given at the Wanamaker store ever since the season opened and which is referred to elsewhere.

The Penn Phonograph Co. report that November was a very satisfactory month with them. It was very much ahead of the same month of last year, and one of the largest Novembers they ever had. December has started in most encouragingly, and their wholesale orders are particularly heavy. They are looking for the largest December they have ever had in both their retail and wholesale departments. The general call for goods is for those of the higher prices. E. Smullem and T. R. Clark started, on Monday last, on their last trip of the year, to be gone up to within a day or two of Christmas.

F. K. Dolbeer, of the National Phonograph Co., was here on Tuesday of last week, and he says their business is picking up very nicely, and in some departments they are working full handed at night.

W. H. Doerr, in charge of the talking machine department of H. A. Weymann & Sons reports that things are very much improved, and that it looks like a very big holiday trade. They are selling all the Victrolas they can get. No. 16 is the big seller. The new cabinet for the Victrola 12 has been meeting with general favor. It is ornamental, and very conveniently arranged. The new Cygnet horns are also selling well and they improve the appearance of the machine and its general tone very much. Mr. Doerr has just returned from a successful trip through New Jersey and Delaware, and Norbert Whitley is at present covering Pennsylvania for the firm.

W. J. Elwell, who is in charge of the retail talking machine department of the C. J. Heppe & Son store, reports that his firm are gratified with the November showing in every department. D. D. O'Neill, who is in charge of the Heppe wholesale talking machine department, has just returned from a trip through the State, in which he was able to make contracts with a number of new dealers. Under a new arrangement the Heppes have made two separate departments, with Mr. Elwell and Mr. O'Neill in charge, instead of conducting the wholesale and retail as one department. Clarence Collins is at present traveling through Pennsylvania and is meeting with very good success. The worst trouble the Heppes are experiencing is the shortness of stock, and are sure that they will have to disappoint many of their customers. The retail department of the Heppe store has been very attractively arranged in the 1117 store, and their wholesale department is in the basement. Recently they had very large shelving built to store their stock, which is enormous, and the contractor had turned over the job as being complete. When the men reported to work one day last week they found that one of these large shelves had not been properly fastened, and during the night it had toppled over and had scattered 5,000 Edison records about the floor. It required some time to get things back in shape, and the records have not all been examined to find out just how many of them were damaged. Mr. Heppe will hold the contractor responsible for any loss. They had a record crowd last Friday night at their Auxetophone recital, which was in charge of Messrs. Abbot and Ferris—representing the artistic and the mechanical side of the instrument, and they were very successful. Last Saturday afternoon alone, on the floor of the store, they sold fifteen machine outfits.

L. Buehn & Bro. report that their business in November has been way ahead of anything they had expected, and they are almost entirely sold out on certain of the more popular instruments they handle. They have also been having a wonderful success with the cabinets, particularly their new pegless cabinets, with which they have made a great hit. Mr. Buehn says he is looking for a very good December, and the only sign he sees otherwise is that they will not be able to get the stock.

Thomas K. Henderson, in charge of the Columbia Phonograph Co., reports that their business in November has shown a very great improvement over last year. O. C. Dorian has just come to Philadelphia from the New York office to act as Mr. Henderson's assistant. He is a son of Marion Dorian and is a very successful man in this line. He has brought his wife to Philadelphia to make this their home.

Mr. Henderson says that from the reports he is receiving from the dealers they supply, he is very much more optimistic than he has been for a long time as to the future of the talking machine trade. The increased business has been largely for the four-minute records and for the Grafonola. R. B. Robinson, who recently became connected with the Philadelphia office as traveling representative, has been doing splendid work and promises to become an active factor in the Pennsylvania trade. C. B. Woodhead, who was formerly connected with Kraemer & Gosorn of Norfolk, Va., Columbia jobbers, is now attached to the Philadelphia office. The new records made by John McCormick, the new Irish tenor who was brought to this country by Oscar Hammerstein and listed by the Columbia Co., are meeting with great success. The general demand for grand opera records has been wonderful and the condition of affairs has been helped very largely by the advent of the new Philadelphia Opera House, which recently started its second season.

TALKING MACHINE PLAYER MARCH.

Robert Russell and Miss Annie Hasson were recently married in the piano store of Kenyon-Shirley Co., Morristown, Tenn., while a talking machine played the wedding march.

Let us stock you up after Christmas

Don't monkey with that slow jobber any longer. You've lost enough money through his funeral-movement to build a house. Tell him, "Never again!" and turn your orders over to us.

We'll ship your goods the same day we get the order. We'll not get them all "balled up" either! We have the stock, and the men to get it right out.

Filling orders the same day we get them is the backbone of our business.

And it's made us mighty successful and popular, too! Our customers put confidence in us because we never disappoint them. And they don't have to carry heavy stocks, for they can get everything in the Victor line from us at a minute's notice.

Our quick service doesn't cost you an extra cent.

Send us your after-Christmas order, big or little, and we'll prove to you that you can't get better service anywhere.

Drop us a postal to-day for our catalogues, and for our handsome booklet, "The Cabinet That Matches."

HOW JOHN WANAMAKER INTERESTS THE PUBLIC

In His Talking Machine Business—Couples the Opera Idea to His Victor Department and Reaches Vast Audiences Two and Three Times Each Week.

In addition to the four-page paper "The Opera" giving full information as to the operatic program for the week as well as a synopsis of the various works, John Wanamaker, at both his New York and Philadelphia stores, has taken advantage of the fast growing demand for opera and music of the better class, by providing lectures on each opera the day preceding the performance.

The Philadelphia lectures by Joseph M. Rogers, are given in Greek Hall and since their inception it has been impossible to obtain a seat unless one arrived before the appointed hour. The lecturer explains fully the theme and story of the opera, describing every little detail, and with the Victor and Red Seal records conveys to the audience a thorough understanding of the music that enables one to more readily understand and enjoy the actual performance.

The same is being done with equal success in the auditorium of the New York store, where the Rev. Henry R. Rose is the lecturer.

The audiences are always large and display the deepest interest, and through these lectures they are materially increasing their sales of Victrolas and Red Seal records. This can best be judged by the photographs taken at one of the Wanamaker concerts in Philadelphia and reproduced herewith. Observe the keen interest and pleasure manifest in the faces of the audience and one can get an idea why these lecture-recitals have such a vogue.

AUDIENCE AT OPERA CONCERT AT WANAMAKER'S, PHILADELPHIA (PHOTOGRAPHED FROM STAGE).

VIEW LOOKING TOWARD STAGE AT VICTOR CONCERT AT WANAMAKER'S.

If any talking machine dealer is at any time in either New York or Philadelphia, it will pay him well to attend as many of these Wanamaker lectures as he can.

PATENT OFFICE CHANGES.

Changes in Classification Division of United States Patent Office Will Save Time and Expense in Examining Patents.

The classification division of the U. S. Patent Office at Washington is undergoing a number of changes which will work advantageously to the interests of inventors throughout the country. Commissioner Moore expects that when the work is completed the time and expense of examining patent applications will be lessened by thirty per cent., and that patents will have a greater degree of validity when issued.

There are now fifteen well trained examiners working on reclassification of patents. Progress is as rapid as is possible with the force available. There are 248 classes of patents, and ninety-three of these, representing about half of the 930,000 United States patents, have been reclassified. When applications are received for patents in any branches reclassified the value of the new classification is at once made evident in the saving of time and expense, and in the far greater accuracy with which the examiners can work.

VANDERBERG MUSIC CO. REINSTATED.

(Special to The Talking Machine World.)

Green Bay, Wis., Dec. 6, 1909.

The National Phonograph Co., Orange, N. J., have reinstated as Edison dealers the Vanderberg Music Co., Frank Vanderberg, proprietor, in this city. The same concern has a store at Marinette, this State, and Mr. Vanderberg is regarded as very enterprising. A full line of pianos, small goods and sheet music is handled in both places.

The traveling corps of the New York Talking Machine Co., 83 Chambers street, New York, are now all in the field and will remain out until Christmas. S. W. Williams started last week to call on his trade in New York State.

THE SOUTHERN CALIFORNIA TRADE.

Decided Improvement Noted in All Branches of the Talking Machine Trade—New Victor Records Help Business—Big Holiday Shipments for Southern California Music Co.—Good Columbia Co. Report—Other Items of Timely Interest.

(Special to The Talking Machine World.)

Los Angeles, Cal., Dec. 3, 1909.

Los Angeles dealers and jobbers are advancing on the holiday trade with great expectations. Statistics indicate a great increase in all branches of the talking machine trade for the coming season. Favorable signs have already made their appearance, although the latter part of November was somewhat quiet, which is to be expected before the big business begins. Stock conditions are very favorable, the jobbers taking extra care to place early orders with the manufacturers.

Sherman, Clay & Co. have already moved some of their surplus stock of Victor goods in orders which are daily increasing. The splendid list of December Victor records will no doubt help the trade for such goods during the holidays. Their supply of Victor machines and Victrolas seems to be in splendid shape and sufficient to meet the growing demand.

The Southern California Music Co. are still receiving holiday shipments of Edison goods, and have a creditable supply of the same on hand. The Christmas advertising matter sent to the dealers for Edison machines and records is greatly appreciated by them. The appearance of the new Amberola has commanded more attention in the trade than any other new instrument in some time past. Demonstrations under the direction of C. E. Lyons, the National Co.'s representative, have been witnessed by most of the dealers in the section, whose approval of its merits seems to mark the era of the greatest advancement in the existence of the Edison phonograph. A great future is expected for this new idea in cylinders.

The Columbia Phonograph Co. are receiving a volume of business through the efforts of W. G. Farquharson, who has lately joined their traveling force in place of A. B. Kaufman, who has left the Columbia Co. to return to his home in Chicago. Although a stranger in the talking machine business, Mr. Farquharson has shown marked ability, and hopes to share a large portion of the Columbia Co.'s holiday trade. Wm. Stidham, manager of the local store, is pleased with the fall prospects and says the stock of machines and records is in excellent condition. The Grafonola "Elite" is expected to arrive at an early date, as well as a shipment of the "Regent." The new style disc graphophones are in great demand, as are the December double records. The recently announced four-minute Columbia Indestructible records are very much in demand, and many inquiries regarding them have been received.

Harry Club, of the Wiley B. Allen Co., reports several good sales of Victrolas, as well as the sale of an Auxetophone to an Arizona customer. He is now working on the perfection of his picture machine, for which he has several patents. Particulars regarding the same will be announced later. The Holmes Music Co. have had a good trade during November, and are ready for the holiday buzz.

All retailers are well supplied with goods and most of them have started the holiday advertising campaign. The recent recital given in this city by George Hamlin has increased the demand for the Red Seal Victor records.

Riverside, San Diego, Santa Barbara, Redlands and other Southern California cities are sending in orders which look as though they were preparing for a larger Christmas trade than ever. Many of the dealers have visited the jobbers to make selection of goods for the occasion.

C. E. Wilson, general manager of the National Phonograph Co., has visited Los Angeles and vicinity, together with Mrs. Wilson. His trip is one of business and pleasure combined, which he expects to continue up the coast to Washington.

The Victor-Columbia litigation is being followed by the local trade with some interest.

HARDY IS A HUSTLER.

Goes After Trade in His Territory and He Gets It Too—Pays Big Tribute to the Phonograph.

One of the talking machine hustlers in Michigan is H. A. Hardy, proprietor of Hardy's music store at Standish, Mich. He has worked up a splendid trade in talking machines, as well as pianos and organs, in his territory, by merely not waiting for trade to come to him, but seeking it. In this connection he utilizes a very bright and intelligent pair of horses and wagon and

HARDY'S EQUIPMENT.

canvasses his territory most assiduously. Mr. Hardy remarked to The World: "I never think of going out with a piano or organ without taking along a phonograph and a good assortment of records, and I seldom ever bring any of the goods back. In the last three years the talking machine business has brought me in more clean cash than all the rest of my business put together. Business this fall looks fine. I am selling more high-priced machines than I ever have before." The goods shown in the picture are eight phonographs and six hundred records, which Mr. Hardy is drawing from the freight office to his store.

The "B. & H." Fibre Manufacturing Co.

extends best wishes for

A MERRY XMAS and HAPPY NEW YEAR

TO YOU ALL

May the year 1910 be as good to you as 1909 has been to us ! !

PROMINENT MEXICAN ARTISTS

Employed by the National Phonograph Co. During Tours of Recording Experts—Several Prominent in Spanish Speaking Countries, Little Known Here—Some Talented Singers of the "Zarzuela" or Light Opera Whose Voices Will be Heard in Edison Records.

Among the many artists employed by the National Phonograph Co. during the various tours of their experts to Mexico in quest of records are several sopranos who deserve special mention. Not a few are renowned throughout all Spanish-speaking countries, and several have delighted the music-loving public of the great capitals of Europe and the larger cities of the United States.

One of the most popular in Spain, South America and Mexico, although but little known in

EMILIA VERGUERI.

this country, is Emilia Vergueri. She has a fine soprano voice of remarkably clear, rich tone, and her intelligent and expressive interpretation of classical selections is very delightful. She is a lady of unusual personal charm, and her stage presence is quite suited to the fine quality of her voice and high artistic ability. Although primarily a singer of the higher class of music, she is equally famous in the lighter music of the "zarzuela," which may be compared to our light opera or musical comedy, although the music is generally of a higher class than the latter.

There are three classes of "zarzuela," one of three acts, among which are many that approach grand opera in quality, and the others of one and two acts. The one-act "zarzuelas" are the most generally popular. They are very short, each complete in itself, and usually three are given the same evening. Tickets for all, or any particular ones, may be purchased. The music and action of each is entirely different from those of others, and as all the artists have very large repertoires, their versatility is taxed to the utmost.

Particularly famous as a singer of this class of music is Emilia Sanchez, who has a beautiful soprano voice of wide range and exquisite tone.

Of special interest as a singer of the higher class of "zarzuela" music is Sofia Camacho, soprano and elocutionist, well known in Mexico. As a young girl she attracted the attention of one high in authority in Mexico, and later received her musical education at the expense of the Mexican Government.

Another soprano of very wide fame is Soledad Goyzueta, who is well known wherever Spanish is spoken. She has a beautiful voice and possesses remarkable artistic ability.

Also of "zarzuela" fame is Prudencia Grifell, who, besides being a first class soprano, is a gifted comedian. Her husband, F. Martinez, is a comic tenor of note, and they are well known for their duet work. Senoritas Remón and Herrera are sopranos of the very first rank and large reputation, and both are unusually talented. Marîe de Jesús Delgado is a soprano well known throughout all Spanish America, and Adriana Delgado is a mezzo-soprano with a voice of excellent quality and exquisite tone.

AMBITIONLESS DEALERS.

Too Many Retailers Show a Lack of Resourcefulness in Handling Trade Practically Brought to Their Doors by the Advertising of the Manufacturers—A Traveling Man's Views.

A traveling man for one of the manufacturing concerns in discussing conditions said: "The great trouble with the trade has been that there were far two many dealers that could not be considered as giving the proper representation to the line. As a rule, they were of no standing in their business community, and either lacked the means of pushing trade or are totally incompetent. These kind of people have lost money, and, in large measure, have been eliminated from the trade altogether. The dealers who have continued right along, holding their own and increasing their trade, have gone after it with energy and enterprise. They have 'broke in' to a better class of trade among people of means, who were either ignorant or indifferent to the possibilities of the talking machine as a source of endless and delightful entertainment. The hornless cabinet gave these dealers, the backbone and stay of the trade, their opportunity, and they are making the most of it. The manufacturers are spending fortunes in advertising their products, which the little fellows cannot appreciate, nor would they aid and give application to this great campaign of publicity by local work. The resourceful dealer, with capital, of course, is doing all sorts of stunts to assist the selling and exploiting policy of the companies, and they are getting there with both feet. It is these concerns which are making the money, and among them are classed the aggressive music dealers.

MARKER OFF TO THE ORIENT.

Left Nov. 23 to Join John H. Dorian, the Columbia Representative in the Far East—Foreign Sales Active, Says Edward N. Burns.

On Nov. 23 Harry L. Marker, of the Columbia Phonograph Co.'s laboratory recording staff, sails from San Francisco, Cal., to China, where he will remain in the company of John H. Dorian, the company's representative in the Orient, for probably a year. Mr. Marker will record originals in the Chinese Empire, Japan, Siam, Burmah and India, and gradually encircle the globe, following up his special line of work. He will probably be abroad a couple of years. Mr. Marker was for a while in Siam, where he became a welcome guest at the King's palace, making records of the voice of his royal highness and of a great number of the prominent noblemen and scholars of the country.

Mr. Dorian's health, which was none too robust, is now greatly improved. He is in the neighborhood of Hong Kong, and his reports of trade are very favorable.

Edward N. Burns, manager of the Columbia Co.'s export department, stated to The Review that foreign sales were splendid and increasing right along.

LEEDS & CATLIN CO. AFFAIRS.

Ten hearings before a master have been held in the office of Robert G. Perry, 60 Wall street, New York, trustee of the bankrupt estate of the Leeds & Catlin Co., machine and record manufacturers, of the same city, in the proceedings of the American Graphophone Co. for an accounting and damages over the Jones patent process of duplicating records. The last examination was held Monday. It is held the trustee has funds in hand as well as some property in Brooklyn, N. Y., belonging to the bankrupt concern. The trustee opposed this proceeding, claiming the firm, being in bankruptcy, an action of this kind would not lie, but the United States Circuit Court and the Court of Appeals directed otherwise.

The Southern Talking Machine Co., Memphis, Tenn., have incorporated with a capital stock of $10,000. The incorporators are Garfield Fisher, John Holmes, William Pfeister, M. J. Walsh and John T. Schurmeyer.

CINCINNATI'S BUDGET OF NEWS.

Talking Machine Dealers in a Happy Mood—Better Grade of Machines Have the Call—Big Victrola Sales—Wurlitzer Co. Aid Dealers—An Unique Electrical Display—New Columbia Goods Take Well—Edison Cygnet Horns a Hit—What Various Houses Report.

(Special to The Talking Machine World.)

Cincinnati, O., December 2, 1909.

Cincinnati dealers of talking machines and records are in a happy mood. The advance holiday business seems to be far beyond the expectations of a month ago, and there is every indication of all dealers getting a good slice of the general demand for these household necessities. The collections are reported to be above the average.

Cincinnati talking machine men are more intensely interested in the talking machine business than they ever were in the past, and Cincinnati can boast of some excellent talking machine salesmen. The cause of this enthusiasm is the appreciation that the public is showing for the Victor-Victrola, and the great number of sales which are being made. This naturally results to the profit of everybody engaged in the business, and with such good returns that they are encouraged to give the business strenuous and untiring attention. It is a noticeable fact to those who come in contact with these Victrola salesmen that the Victrola and Auxetophone are always in their minds day and night.

Several of the most prominent people in Cincinnati purchased Victrolas during the month of November and the showing for the month was extremely satisfactory. In reply to one of their circulars, the Rudolph Wurlitzer Company received a letter from the White House, thanking them for the offer to install an instrument in that place and advising them that they already had a Victrola. Several Victrolas were sold to rich Cincinnatians and shipped to Florida. The Rudolph Wurlitzer Co. have sent out a number of Victrolas to neighboring towns; some were made direct, while others were turned over to the local dealer.

The dealer ordinarily needs assistance from his jobber to make the first Victrola sale, and The Rudolph Wurlitzer Co. understanding this, have offered the services of their retail salesmen to dealers who are located convenient to Cincinnati. It is undoubtedly merely a question of time according to the opinion of the officers of this company, when every dealer will be able to carry a Victrola in stock. The Rudolph Wurlitzer Co. several weeks ago made arrangements with a dealer in a city which previously had not had any Victor representation. The person in question was induced to stock a Victrola which was duly shipped him several days ago. To-day the company received a letter acknowledging receipt of the Victrola and enclosing an order for two additional Victrolas—and a quantity of Red Seal records.

Last week The Rudolph Witzler Co. had a unique electrical display in the front of their building. The display was arranged to represent a bomb being fired from a motor and exploding in a mass of different colored stars, which finally formed the word "Victor." This week they have on display in a window a Moorish inlaid Victrola with Moorish arms and tapestry. It is attracting a great deal of attention and the price, which is plainly marked $750, does much to make the $200 price of the regular mahogany Victrola look insignificant and small, and there has been a noticeable absence of complaints as to the price of the mahogany Victrola, since this instrument was received by The Rudolph Wurlitzer Co.

The Rudolph Wurlitzer Co. have a big stock of Victrolas on hand, and in spite of this are awaiting very anxiously a further shipment from the factory, in view of the big demand which is now being made upon them, and the tremendous number of orders they expect to receive for Christmas delivery.

Manager S. H. Nichols of the Columbia Phonograph Co. reports excellent business for November, both retail and wholesale; in fact, the month's business ranks with the best November in the history of the Cincinnati store.

Retail business has been particularly good with the Grafonolas, the real serious question being to get the goods to supply the demand. While the retail business in Grafonolas has been excellent, the wholesale has been equally as good, and Grafonolas have been shipped all over the territory subject to the Cincinnati store.

Although the high grade goods have been in demand, an evidence of the return of good times is the general gradual return of the laboring classes as purchasers, and, as predicted before, the laboring classes will soon be a buying factor and the coming year promises to be the largest in the history of the company.

The holiday trade is starting off well, and there is no reason to doubt an excellent business.

The Columbia Co. have put new life into the business with new goods, and the four-minute indestructible records and cylinder graphophones to play the two-minute and four-minute indestructible records have certainly livened things up, and the demand for these goods is way beyond supply. Columbia dealers are reaping the benefit from the demand created by the present line of disc and cylinder graphophones and records.

The lively manner in which the cygnet horn, the new horn manufactured by The National Phonograph Co., has been received by The Milner Musical Co., is shown in the statement of General Manager Walter W. Timmerman, who says: "We disposed of every one of the new Cygnet horns received in our first shipment, within the first week after their arrival. It has been a great stimulant to our old customers, and the many pleased comments from our new customers indicate that the future for this type of horn is already made.

"The sale in the Edison line has been especially good, exceeding our expectations. The demand of records has been the best we have ever had, which speaks well for the November list. We anticipate a great deal more patronage in the month of December, and in view of all the other departments being on the increase, we hope to have our best month in the talking machine department."

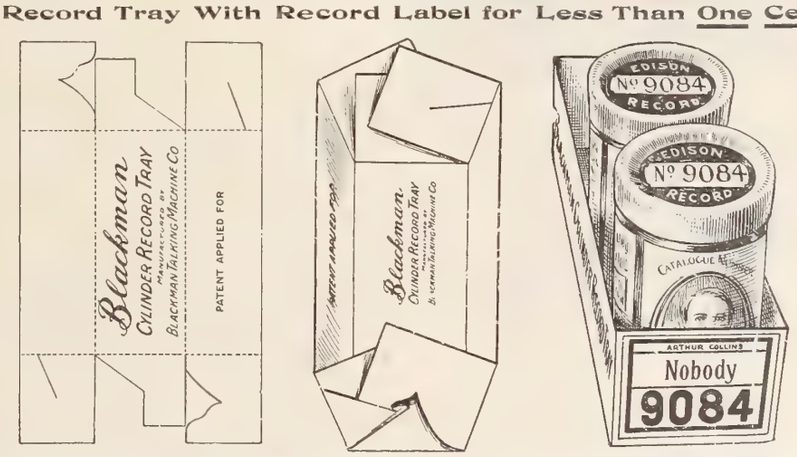
The Milner Co. are daily looking forward to shipments of Edison Amberolas, and anticipating their arrival several sales have been made and many are in prospect of being cinched.

The Red Seal records of the Victor folks held the record for sales last Saturday at the Milner store.

The risk attending want of success is not to be compared with that of neglecting the attempt.
—Beacon.

IMPROVE YOUR SYSTEM
AND
INCREASE YOUR RECORD SALES
BY USING
THE BLACKMAN CYLINDER RECORD TRAY
(Patent Applied for)

A Record Tray With Record Label for Less Than One Cent



The BLACKMAN Folding Trays for Cylinder Records are shipped FLAT and can be FOLDED into STRONG TRAYS in a few seconds, as shown above. This tray, with Rapke Label, makes a handsome looking record stock and a system you can't beat. The labels act as Silent Record Salesman and the customer can point to the record he wants to hear. Adopt this system and your sales will not only increase but it will never take more than a few minutes to make up a Record order.

THE BLACKMAN FOLDING TRAY USED IN THE SYRACUSE WIRE RACKS enables you to carry a large stock in a small space, and also use the Rapke Label. We furnish wire racks at regular prices, either wall or revolving style, with opening to accommodate Blackman Trays. Write for prices.

TIMELY TALKS ON TIMELY TOPICS

A manufacturer who had noticed the "topic" in last month's World about the scarcity of traveling salesmen pronounced it true in every particular. As additional information on the subject, he said: "What The World remarked cannot be denied. Good salesmen are not to be had for some reason or other. The big companies have room for a number of men of this stamp, but they are not found. There was a time when salesmen of ability were obtainable, but now, what has become of them? Why, when one of the companies launched a new jobber or even a prominent dealer took on the talking machine it was usually with the understanding that a manager would be provided who had a knowledge of the business from a selling point of view. Then one of the men who had traveled the territory where the new jobbing firm was located, and knew every dealer, what stock he carried, his financial, business and perhaps something of his social standing in the community, was the party to fill the bill, and he was drafted to take the position. This occurred not only a few, but many times, and a number of the most successful talking machine managers of jobbing houses and the larger department stores were road salesmen at one time or another for the factories.

"So long as these vacancies could be filled the loss was not felt keenly, though good men were parted with no little regret. As was generally the case the traveler secured an excellent place at a better salary and brighter prospects, besides getting off the road, which every man looks forward to ultimately. But so many of the 'boys' were transferred into managerships that it has become more difficult, if not well near impossible, to find acceptable substitutes. This is the condition at the present. Here is an opportunity for young men of steady habits, made of the right stuff and ambitious to get ahead. The talking machine trade is a fine line to be connected with. The goods are right and the people whom the manufacturers desire to get interested are above the average merchant. As a class, talking machine jobbers and dealers are active, enterprising and progressive, else they are 'in wrong.' The remuneration is also on a higher scale than that paid in other branches of trade to start, and if capability and adaptability are displayed advancement is rapid.

"I should think there were a surplus of traveling salesmen in the piano business who would find it to their advantage to look into this opening," said the manufacturer in conclusion. "Of course, they would be obliged to train themselves to the exigencies of the line and learn its peculiarities, which differ materially from selling musical instruments. At the same time they possess the preliminary experience; the remainder is a detail. Good roadmen are needed, and it has become a really serious matter where to look for them." These suggestions and the opportunity are offered in good faith. The future of the talking machine business is bright with promise and the right kind of men may adopt an honorable and profitable career that would doubtless give the same excellent chances for preferment as have occurred in the past.

Great things have been accomplished in the way of improved trade products—machines, records, horns, needles, etc.—and doubtless still more wonderful developments are to follow. A prophet who talked as with authority declared that sometime in 1910 one of the most marvelour surprises would be sprung by a company recognized the world over as the embodiment of the spirit of progress in all that pertains to the talking machine industry. As in the past, due announcement will be made when the proper time arrives to take the distributers into their confidence. Until that date arrives we must possess our souls in patience.

The so-called combined disc and cylinder machines have not made a popular hit, despite the claims of their inventors. The trade has withheld their approval by not buying in other than an experimental way. Perhaps the price may have had a deterrent influence. At any rate, whatever the reason the demand, if such ever existed, was so slight apparently that further improvements to simplify the device and lessen its cost are seldom heard from. Another combination machine of this type has recently appeared, however, in which a dealer of Brooklyn, N. Y., is interested. It is rather a crude affair, and it may answer for some purpose, but as a machine for a passably clear, not to say brilliant, reproduction of records, it leaves much to be desired. The device requires the service of a mechanical expert to adjust its parts, and this of itself is sufficiently condemnatory to create distrust on the part of the dealer, who is always skeptical of everything in an experimental stage, and properly. The old saying that experiments should be completed in the factory and not in the public eye, has lost none of its force, and applies particularly to talking machine appliances.

Elsewhere extended reference is made to the extraordinary demand this season, which grows more acute as the holidays approach, for the hornless cabinet machines. A great many in the trade believe that the several types of these machines now in the market will not cut into each other's business, as they occupy distinct and separate fields. It is now evident that the respective manufacturers of these splendid lines, actively engaged with their own jobbers and dealers, are working up such a tremendous volume of sales that the orders cannot possibly be filled for a long time ahead. Reports say that orders for 4,000 Victrolas are now on hand. Only samples of Amberolas have reached the entire trade as this issue of The World comes off the press, while the supply of Grafonolas is so inadequate that not even that much has been accomplished. Such a rush for goods of this kind is a reminder of the boom times of 1906, when the factories were so overwhelmed with orders for the regular line of machines and records that they did not hardly know which way to turn. This is auspicious. The public have not tired of the talking machine. Not by a long sight. Perhaps the prosperous years which have been enjoyed may not put in an appearance again immediately, but another happy cycle is on its way, as all signs unmistakably portend.

GEORGE HOWARD IN CHARGE.

(Special to The Talking Machine World.)

Cincinnati, O., Dec. 8, 1909.

George Howard, well known in talking machine circles, has been engaged to take charge of the talking machine and piano department of J. C. Groene's store at 424 Race street. The former will be on deck after to-morrow. He was formerly with Groene and was at one time with the defunct Cincinnati Talking Machine Co. Mr. Groene is enthused over conditions of the past month, the sales for November being highly pleasing. The piano department of Mr. Groene is an innovation which was just introduced this week. A wareroom has been fitted up on the third floor and on display are makes of Decker & Son, Schumann & Co., and the "Groene," which is a product of the Homer Piano Co., New York.

VISITED VICTOR PLANT.

Recently Lipman Kaiser, director of the talking machine department of the S. B. Davega Co., Victor and Edison jobbers, New York, was in Philadelphia, calling at the plant of the Victor Talking Machine Co. and the Excelsior Drum Works, Camden, N. J.

COLUMBIA CO. SIGN GIPSY SMITH.

The World's Greatest Evangelist Sings His Best Known Revival Songs Exclusively for the Columbia Co.

Gipsy Smith, the world-famous evangelist, has just made three double disc records of his six best known songs at the Columbia laboratory. These records are said to be highly meritorious musically and as sacred songs, apart from the sentimental value attached to Gipsy Smith's name. His voice is marvelously sympathetic and happens to possess wonderful recording properties, for every word in these records can easily be understood from beginning to end.

Gipsy Smith is known all over the English-speaking world, and these records are the same songs that have been associated with his work in England, Wales, Scotland, Ireland, Australia and South Africa.

It is safe to say that no evangelist since Moody

GIPSY SMITH, THE GREAT EVANGELIST.

has ever succeeded in attracting larger audiences than Gipsy Smith. He has spoken to over three million people during his recent American tour and it is the usual thing for him to address audiences of ten thousand people in a night. As a speaker and singer he is unique, and combines the ability of a Moody and a Sankey, with many of their combined personal characteristics and power. He is perhaps the only evangelist who needs no introduction to any person, or class of persons in the United States, for everybody knows him. These records by Gipsy Smith will be announced by the Columbia Co. at an early date.

Just before he sailed for England he wrote the following note to the Columbia Co., which tells its own story:

"After repeated requests in England and America, I have decided to place on record some of the songs of the Gospel, or as I call them, "sermons set to music," which I have found so helpful in my work in England, America, Australia and South Africa. The following songs: 'Saved by Grace,' 'He Lifted Me,' 'Kept for Jesus,' 'The Beautiful City of God,' 'Jesus Is My Light' and 'Pass It On," will all be recognized as old favorites, and as sent forth by the Columbia Co. can be used and preserved long after my voice is far away or no more. My one hope is that they may in this form bring back blessed memories and give new inspiration wherever heard. GIPSY SMITH."

We had an opportunity of listening to the first record made by Gypsy Smith, and unquestionably these records will prove a tremendous hit.

The enunciation is so clear and the voice purity so marvelous that they will appeal to the people who have personally listened to the voice of the famous evangelist.

The Columbia Phonograph Co. have certainly scored a triumph in this latest acquistion to their star list.

BLACKMAN CO.'S PURCHASE.

Stock of Forsyth & Davis, Kingston, N. Y., Bought by New York Jobbers and Shipped to Headquarters—More Improvements in Store—Business Excellent.

The Blackman Talking Machine Co., 99 Chambers street, New York, announce that they have purchased the entire business, stock and goodwill of Forsyth & Davis, Edison jobbers and Victor dealers of Kingston, N. Y. The stock has been shipped to the Blackman headquarters and Forsyth & Davis have formally notified all their dealers of the change.

In line with the other improvements made in the Blackman store—bright blue front, redecorated interior, etc.—there has been installed a private switchboard connecting all departments and presided over by an operator. The new system will do much to facilitate the business of the establishment. Regarding present conditions, J. Newcomb Blackman declared that the chief difficulty was in getting goods from the factories rather than orders from the dealers, and that in Victor machines especially, only their regular dealers could be accommodated, and even they could not be supplied with sufficient Victrolas.

MUSIC IN AMERICA.

Oscar Hammerstein, Famous Impresario in Article in Saturday Evening Post Pays Tribute to Influence of Talking Machine and Player-Piano.

In a recent number of the Saturday Evening Post, Oscar Hammerstein, the famous impresario, contributed an interesting article on his methods of securing operatic stars, and in which he paid the following tribute to American appreciation of music:

"By every possible instinct the native American is musical, and yet only a few people stop to realize it," said Mr. Hammerstein. "They are willing to accept the bald statement that, because refined music—and by this I mean the best modern expressions of it—originated in Europe, the European leads the world in his appreciation of it. Let us see just why and how the American ear gets the prestige that I contend is its own. Go into the average American home and, with few exceptions, you will find some kind of musical instrument there. It may be a piano, or a mechanical piano player, or it may be a humble and complaining accordeon. But certain it is that you will find something with which to make some kind of melodious, or, as the case may be, unmelodious sound.

"Ask any piano manufacturer and he will tell you that more and better pianos are made and sold in the United States than in any two other countries. The phonograph dealers will tell you the same thing. Their instruments go to the farms as well as to the cities. Thus music is part of the home life of the American. An American family that does not boast of at least one member who can play on some kind of instrument, or sing something when a visitor comes to call, is lacking in social standing in the community, whether it be a city or a cross-roads village.

"On the other hand, this particular opportunity does not come to the average European, whose wage is smaller than that of the average American, and whose idea of home comfort and home culture is not so extensive as that of the American. He cannot afford to have a piano or a phonograph as readily as the American. Therefore, the European child, while growing up, lacks the effect of music in the home air."

FILES BANKRUPTCY PETITION.

Louis Rosansky, a dealer in talking machines, having his place of business at 379 Grand street, Manhattan, filed a petition in the United States Circuit Court, of this district, on November 24, to be adjudged a voluntary bankrupt. He gives his liabilities as $3,714.80 and his assets as $1,454.

TALKING MACHINE AT FUNERAL.

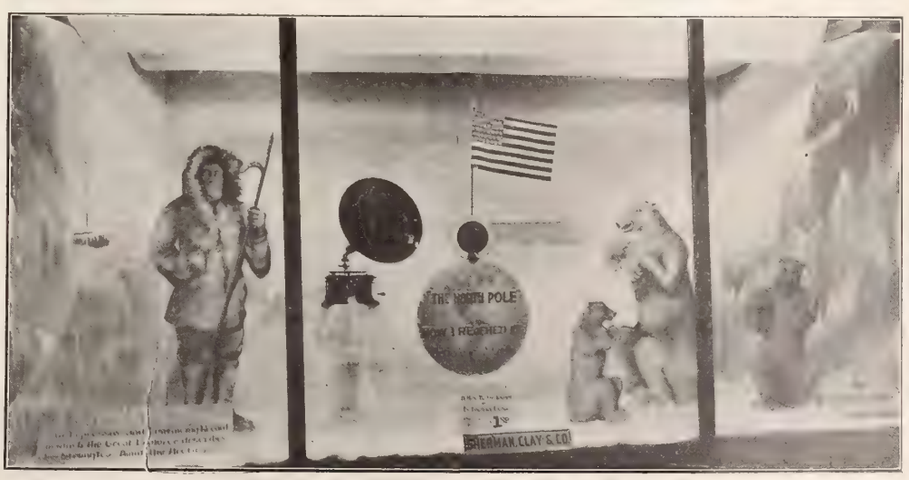
The phonograph was used for the first time in a funeral service in Vineland, N. J., at the funeral of the wife of Councilman A. F. Gutterson on December 7. Mrs. Gutterson in life always said the phonograph could render "Beulah Land" and "The Home Over There" in sweeter tones than any singers of her acquaintance.

NOVEL WINDOW ADVERTISING.

Sherman, Clay & Co. Prepare Attractive Display Which Is Drawing Trade.

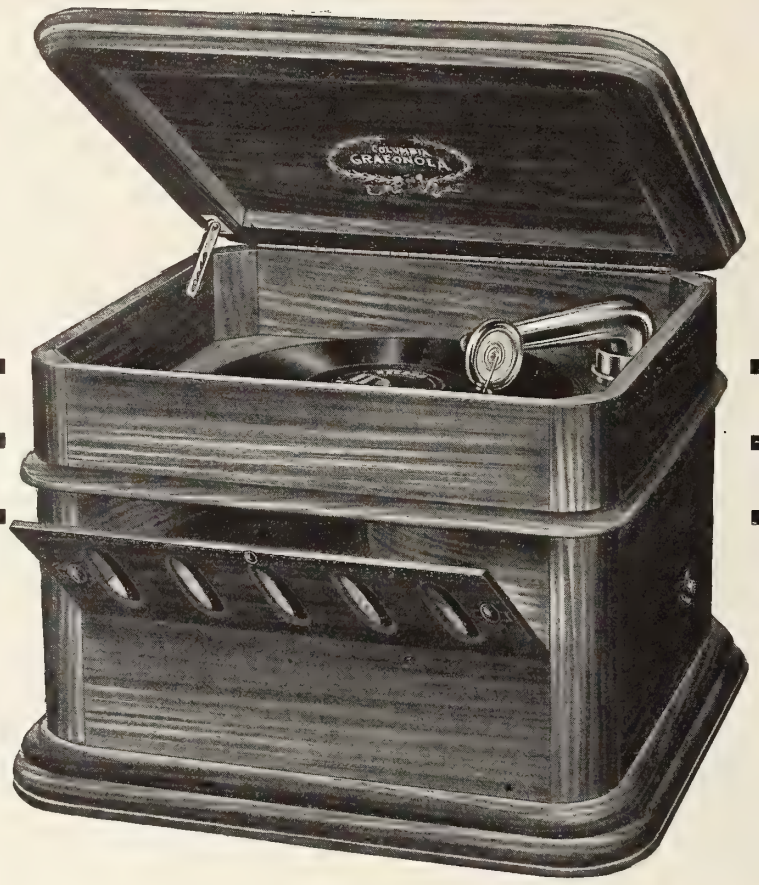
The illustration herewith was reproduced from a photograph received from our San Francisco correspondent. It shows the kind of advertising which the great house of Sherman, Clay & Co. is doing in connection with the Victor records made by Dr. Frederick Cook.

The window was designed by Sherman, Clay & Co.'s window trimmer. The bears and Dr. Cook are cut out of card board, on which the scenery is presented. The cotton on the floor is sprinkled with mica, the sky border of blue cambric. The scenery is made in four pieces and pasted together. It is attracting a good deal of attention and the Victor records made by Dr. Cook are as a consequence in increased demand.



SHERMAN, CLAY & CO.'S COOK RECORD WINDOW.

The Greatest Hundred Dollars' Worth of Music in the World



THE COLUMBIA
Grafonola "Elite"—$100

We are pushing the third large run of these Grafonolas through our assembling rooms as rapidly as possible with product of this high character.

It is too late now to predict that this "smallest cabinet machine" will transform the high-grade talking machine business—for it is already a demonstrated certainty.

Exclusive Columbia dealers wanted—that is, dealers who can handle exclusive Columbia selling rights.

Columbia Phonograph Company, Gen'l

TRIBUNE BUILDING, NEW YORK

DELAY IN SHIPPING AMBEROLAS

Explained by Sales Manager Dolbeer—Doing Everything in Their Power to Satisfl Customers—Congestion Will Be Conquered About the Middle of Next Month.

The delay incident to the anticipated prompt shipment of the Amberola hornless cabinets by the National Phonograph Co., Orange, N. J., so as to meet the date of placing the goods on sale, is thus explained by Sales Manager Dolbeer:

"We have done everything that lay in our power to supply the heavy initial orders of the Amberola, have exhausted every resource that could be brought into requisition to accomplish that end; but we simply could not secure enough cabinets from manufacturers to take care of the unexpected volume of initial orders by the date at first anticipated—December 1.

"The plea of the cabinet manufacturers is the same as is heard among manufacturers everywhere, and bears out the prediction that was freely made at the time of the financial depression—that when the country began to recover its equilibrium the volume of the ensuing business would temporarily embarrass the manufacturing world. The remedy is in sight, but we regret to say that it will not materialize in time to supply the entire requirements of the holiday trade.

"The fraction of the initial orders that we have been able to fill, and can yet supply before Christmas, has been and will be distributed proportionately and without favor among our jobbers. it is but a small proportion of the total, to be sure, but it will at least permit of the securing of some holiday benefits from the new machine, in that the Amberolas that reach the trade in time can be displayed and orders taken from them for future delivery. We are promised a goodly supply of cabinets by the first week in January, which we will equip and ship by January 15. After that time we expect to be in a position to handle the situation more easily.

"The Cygnet horn situation is much the same in many respects as the Amberola, although for obvious reasons hardly as regrettable. We have supplied a great many orders and are shipping as fast as the horns can be rushed to us from the manufacturers, so that the market will be fairly well supplied for the holidays."

BIG DEAL IN BALTIMORE.

Sanders & Stayman Co., Well-Known Piano and Talking Machine Dealers, Buy Out Lertz.

(Special to The Talking Machine World.)

Baltimore, Md., Dec. 10, 1909.

An important deal was consummated in this city on December 4, when G. Wright Nichols, president of the Sanders & Stayman Co., secured control, through purchase, of the entire stock, good will and franchises of R. Lertz & Son. The entire stock of Lertz & Son is being disposed of at special sale, which is being widely advertised.

In addition to the agency for several of the leading lines of pianos, including the Steinway and Weber, Sanders & Stayman handle the Victor and Columbia lines of talking machines and records very successfully.

A CONVENIENT HOLIDAY VOLUME.

"Holiday Hints" is the title of a handy little booklet issued by the S. B. Davega Co., 126 University place, New York, in which they furnish an illustrated list of their talking machine and sporting goods specialties. Its style is terse and concentrated, and if a beter grade of cuts had been used the otherwise neat booklet could be commended from a printing viewpoint. In it they declare their selling policy in the following paragraphs, excerpts from the preface:

"It has been our aim during the twenty-nine years we have been in business to handle only the best quality of goods and to give our patrons the lowest prices for the highest grade article. If you are not satisfied with the purchase made at our establishment return it to us at once and we will be only too pleased to exchange it or return the money in case we cannot satisfy you. We want your friendship as well as your trade." The accompanying telegram idea is clever.

CHANGE OF OFFICERS

Of Ludden & Bates Southern Music House Announced to Take Place on January 1—Headquarters to be Moved to Atlanta.

On January 1 there will be considerable change in the affairs of the Ludden & Bates Southern Music House, Savannah, Ga. Leonard Carter will retire from the presidency and will be succeeded by W. P. Dorough, the present vice-president, which office will be assumed by John H. Carter. The other officers of the company are: E. T. Dorough, secretary, and H. P. Mulkey, treasurer. On the first of the year the headquarters of the company will be removed from Savannah to Atlanta. This concern handle talking machines and records very successfully at their various stores.

HOLIDAY TRADE IN FULL SWING.

Jobbers and Dealers Are Ordering Fair Stocks—Hornless Machines in Great Demand—Victor Co.'s Immense Business—Expansion of Manufacturing Resources Continues.

Holiday trade is in swing with the jobbers, and dealers, while not buying as freely as they should, still are in the market ordering a fair stock of machines, records, horns, etc., as well as engaging for a future supply, especially in the high-price hornless cabinets, Victrolas, Amberolas and Grafonolas. In these lines there is developing a serious shortage, despite the best efforts of the manufacturers. Despite the fact that the Victor Talking Machine Co., Camden, N. J., have enlarged their great plant with a view of grappling successfully with the demand—double that of a year ago—of the present season, they are far behind on orders, and there are about two dozen demands from jobbers and dealers for every Victrola turned out.

Of trade in general, W. S. Moffatt, at the head of the New York Talking Machine Co.'s finance department, said: "For three months past we have been doing a fine business. Dealers are placing their holiday orders and goods are going forward. So far we have met every requisition made upon our stock; in other words, giving 100 per cent. of the goods specified. The factory are slowing up a trifle on some types of machines, and we have no complaint to make about Victrolas.

"You see, the business of the Victor Talking Machine Co. has been so tremendous that new additions are constantly being made from sheer necessity to their already mammoth plant. Still, they seem to be unable at times to keep fully abreast of the demand for their line, which is conceded to be the greatest in the world. The Victor is the leader, and its pre-eminence cannot be successfully challenged.

"During the past year their export business has more than doubled under the capable management of Daniel O. Mitchell, with headquarters in Camden, N. J. Charles Ferree Lightner, who makes Rio Janeiro, Brazil, his home address, looks after the Victor business in the eastern cities of all the South American countries, and he is increasing the trade rapidly. He is certainly one of the most capable men in the foreign service. Mr. Lightner will start for the United States in April next, spending his vacation of several months here. Thos. F. Perry is the company's representative on the west coast, and as he works in connection (and on a reciprocal basis) with the agents of the American piano manufacturers traveling through that part of South America, he is not only held in high esteem, but is expanding the Victor sales also."

JACOT MUSIC BOX CO. TO MOVE.

The Jacot Music Box Co. have arranged to vacate their present quarters at 39 Union Square about February 1, 1910, and will announce their future location at a later date. They report an excellent business in their Mira music boxes and Edison and Victor machines and records, which is improving with the approach of the holidays.

HOFFMAN SECURES COLUMBIA LINE.

The Well-Known Piano Dealers of Kansas City Will Give the Columbia a Strong Representation—General Manager Lyle's Views.

The Columbia Phonograph Co., General, have made another important connection in the music trade by signing up Carl Hoffman, the exclusive high-grade retail music house of Kansas City, Mo. The Hoffman concern is pushing the Columbia line with all the vigor and enterprise that has made this one of the finest and most successful music establishments of the Middle West.

George W. Lyle, general manager of the Columbia Phonograph Co., in speaking of this and other like incidents in the trade, expressed himself as follows: "The sooner every music dealer in the country makes a similar choice in the interest of his own individual business, the better it will be for his business, and the less he will have to regret. That live, up-to-date music dealers of the better class all over the country are joining the Columbia ranks all indications combine to show. The business qualities that have made music dealers successful in their own business have made them quick to appreciate the advantages of the complete Columbia line, especially since the introduction of the new and magnificent line of Columbia Grafonolas, and they are profiting by the unfailing source of income to be derived from Columbia double-disc and Columbia indestructible cylinder records. It was no accident that this wide-awake house of Carl Hoffman cast in its lot with the Columbia on the talking machine and record end of the business. It was a matter of deliberate choice, based upon sound judgment as to quality, and discernment of superior advantages in the way of profit to be gained in the future under the liberal and businesslike program of the Columbia Co."

NEW COLUMBIA 4-MINUTE RECORDS.

This week the Columbia Phonograph Co., General, notified their jobbers and dealers that "in addition to the twenty-four two-minute Indestructible cylinder records on our January list, we have added the nine four-minute selections" listed below: "Prologue from Pagliacci"; selections from "Madame Butterfly," (A) "Little Miss Golden Curls," (B) "A Little Ray of Sunshine Follows Each Dark Cloud," "Good-bye," "The Butterfly," "Though Your Sins Be as Scarlet," (A) "The Ghost of the Banjo Coon," (B) "Linder Green," "I Wish I Had My Old Girl Back Again," "Slip On Your Gingham Gown."

These records will go on sale December 24, the same as the other January records. Beginning with the February supplement there will be listed each month ten of the four-minute Indestructible records and twenty of the two-minute Indestructibles.

AN EDISON ANNOUNCEMENT.

In sending out on December 1 the list of "cut-out" and defective 300 two-minute or standard records, that become effective February 1, 1910, the National Phonograph Co. notify Edison dealers in Canada that "under no circumstances are any of these records to be returned to the jobber until you have received proper notification, at which time the regular forms will be sent you, giving instructions as to how the exchange is to be handled. Any records returned prior to the receipt of the papers in question will be returned to the dealer, transportation charges collect."

Dealers in the United States are also informed that "such of these records as you may have in stock may be returned to our factory, under the terms of our continuous exchange." They are cautioned not to ante-date shipments under the same penalty as the Canadian trade.

SIX MILLIO

Will Buy the Magazines that Carr

There are surely two readers to each copy of a magazine purchased. Twelve million people will thus have Columbia Double-Discs, Columbia Grafonolas and Indestructible Records offered to them through the January magazines.

Hundreds of thousands of these millions of people will certainly ***read*** the Columbia advertisements, and on the most conservative estimate tens of thousands will act on the suggestion that the advertisements offer.

We have not made January an extraordinary month in our advertising either —it's just an ordinary, average, Columbia advertising month.

Occupying either the back cover in colors, or two pages in prominent position on the inside, Columbia advertising will in January be presented to the readers of Everybody's, Munsey's, Cosmopolitan, Saturday Evening Post, Collier's Weekly, Century, Scribner's, Harper's, the World's Work, the Review of Reviews, the Outlook, Hampton's, the Red Book, Success, the American, Good Housekeeping, the National, the Columbian, and the Theatre Magazine.

Some of this advertising features the Grafonola "De Luxe," with Double-Disc Records, some of it features the Grafonola "Regent," and some features Indestructible Records and Cylinder Graphophones.

Exclusive Columbia Selling Rights

If it's only to provide against the future, why don't you get yours
Write in! In any case, it ought to be important to you to realize
the Columbia Phonograph Company, and the restrictive and

Columbia Phonograph Company

N PEOPLE

the January Columbia Advertising

The readers of the great magazines nowadays simply cannot get away from the strong and insistently repeated Columbia advertisements. And every day it becomes clearer that the dealer who keeps in touch with the times and who looks a little way into the future, is in the same position—he simply cannot get away from the Columbia line.

What's the use of trying, anyhow?—the right time to take hold of a thing is while it is in the ***ascendant***—not after it has climbed over the highest point. There never was a time in the history of the talking machine business when the dealer who has been putting his capital and his best energy into building up a business which would last, and which he himself could own, has had such a complete and comprehensive offer as that contained in our program of exclusive selling rights to Columbia dealers.

The completeness of the line and its rapidly growing popularity, together with the solid and fair policy of the Company behind that program, cannot safely be ignored either by you or your competitors.

If we, through our dealers, could offer the public Columbia Double-Disc Records ***alone,*** our position would be secure. If the Indestructible 2-Minute and 4-Minute Records were our ***only*** product the Columbia line would still be the biggest factor in the business. The standard of quality of the Columbia line of Disc and Cylinder Graphophones would ***alone*** maintain Columbia pre-eminence. But when you have added to ***all*** these, the magnificent three Grafonolas—the "De Luxe," the "Regent," and the "Elite," you have spread before you a merchandising campaign that is absolutely without equal in the musical field.

TALKING MACHINE MEN INVITED

To Participate in the Music Trade Exhibition to be Held in Richmond Next May Under the Auspices of the National Piano Dealers' Association—Manager Green Gives Interesting Details.

A preliminary announcement made to The World by Chas. H. Green, manager of the Piano Trades Exhibition, to be held in Richmond, Va., commencing Monday, May 16, states that the talking machine trade is also invited to participate. The exhibition is not a private or money-making enterprise, but is given by the National Piano Dealers' Association in connection with its annual convention, which will be held May 16 to 19, 1910.

The exhibition will be in the Horse Show building, and the floor space has been divided by Manager Green, acting for the association, into 60 soundproof rooms, averaging 300 square feet of floor space. Thirty-six of these are ranged around the sides of the building, and 24 in the center, with a 10-foot continuous aisle or promenade between extending the depth of the floor. Each room or partition has lath and plaster walls, with a half inch of mineral wool sound-deadener between the plastered 10-foot partitions, so that the playing of instruments cannot be heard in the adjoining compartments. In front of each space, office room of between 60 to 80 square feet will be provided, enclosed by a substantial wood railing, with posts 7 feet high, surmounted by glass globes.

The decorative scheme will be gold and white, and the interior lighting effects of the rooms will be tungsten electric bulbs on a white bunting ceiling, making the illumination all that could be desired. The front of each room facing the separate offices will be a plate glass store front, which may be closed off into complete privacy by drawing a heavy shade. On the outside top of the rooms a heavy fancy balustrade is provided, also having the ornamental glass globes on the posts.

Above and behind the booths or soundproof demonstrating rooms seats run around three sides of the large hall, with a capacity of 3,000. It is the purpose of the management to have a celebrated band in attendance during the evenings only, when the public will be admitted by paid tickets. Thursday evening, May 19, will be known as "Society Night," in compliment to the people of Richmond, when the admission will be $1, and in addition to the band a number of prominent vocal artists will take part in the special program. During convention days the exhibition will be open to the trade only from 2 to 6 o'clock in the afternoon.

The charge for space will range from $300 to $375, according to location, with an average price of $350. This will be the entire cost to an exhibitor, excepting the carrying charges each way, and a small amount for unpacking and repacking. J. D. Corley, the State commissioner, will take charge of all exhibits as they arrive in Richmond, and will see that the cost of handling is kept at the lowest possible figure. The funds realized by the sale of space and admissions will be applied to defraying the expenses of the exhibition, and all over and above the actual cost of its maintenance will be rebated to exhibitors. The ornamentation of the hall will be on a lavish scale, white bunting with gold trimmings, with a thousand or more electric lights flashing from the ceiling. Manager Green stated he proposed inaugurating the finest and most elaborate trade exhibition ever held in this country, if not in the world; to demonstrate such a thing is not only possible and practical, but profitable for exhibitors in every branch of the music instrument business.

The prospectus, photographs of the building, floor plan and general literature of the Association will be mailed the trade on or about January 1 by Manager Green.

EDISON BUSINESS PHONOGRAPH

An Absolute Essential in Every Business Office.

Business men who recognize the value of system and time saving methods in the conduct of their business are keenly appreciative of the value of the Edison business phonograph, which is rapidly being installed by the managers of all the progressive institutions throughout the country. It has proven its worth time and time again, virtually acting as a valuable assistant to the busy man and taking the place of a large staff of expert stenographers which cannot always be at his elbow. Ministers and clergymen generally find the business phonograph a tremendous aid in getting out their sermons, while almost every progressive court stenographer finds it a necessary equipment. To all interested, Nelson C. Durand, manager of sales, will be pleased to send a copy of the Christmas number of "Tips," the bright little paper which the National Business Phonograph Co. get out occasionally, or any other information desired.

"THREE THINGS YOU OUGHT TO KNOW."

The Columbia Phonograph Co., General, under date of December 11, sent their trade a folder entitled "Three Things You Ought to Know," accompanied by an explanatory and argumentative circular letter in which they point out the profits of selling on the instalment plan, if properly handled. On these lines they say in part, as follows:

"We have proved over and over again that an instalment business carried on with 10 per cent. added to the list price, and with a reasonable first payment, is just as good as cash business at list price—and not only is just as good, but there's a lot more of it. This 10 per cent. not only makes room for a cash-in offer at list price, but covers the cost of collection. No theory—we are proving it every day. Of course, you have to keep in touch with the buyer, and the 10 per cent. covers the cost of doing it. Moreover, don't forget that when you have a customer coming to the store every week to make payments, you can almost always sell him records."

NEW POSTAL CARD DESIGNS.

Approved by Postmaster General—More Convenient Sizes and Better Paper the Chief Features.

Designs for the new postal cards have been approved by Postmaster-General Hitchcock. They will be printed at the Government Printing Office.

On the ordinary card, the head of the late President McKinley will appear, as now, but a much better likeness has been chosen. On the new small card, intended for index purposes and for social correspondence, a picture of President Lincoln will appear. The two-cent international card will bear a portrait of General Grant.

On the double, or reply, postal card, will appear a portrait of George Washington, while the stamp on the reply half will have a likeness of Martha Washington.

The borders of the stamps on all the cards will be diversified in design. On all of the cards the words "Postal Card," required by the Universal Postal Union Convention, will appear on the borders of the stamp and not, as now, as a separate inscription. The paper to be used is the best for the purpose yet manufactured.

KUNDE BUYS COLUMBIA STORE.

(Special to The Talking Machine World.)

Milwaukee, Wis., Nov. 15, 1909.

Last week A. G. Kunde, 1316 Fond du Lac avenue, who has been doing a nice business, bought out the local store of the Columbia Phonograph Co., 413 Grand avenue, this city, taking over their good will, stock, fixtures, etc., and assuming the lease of the premises. He placed a substantial order for new goods with the transfer of the business. Mr. Kunde will continue both places and will handle the Columbia line exclusively as a jobber and dealer in control of the city of Milwaukee.

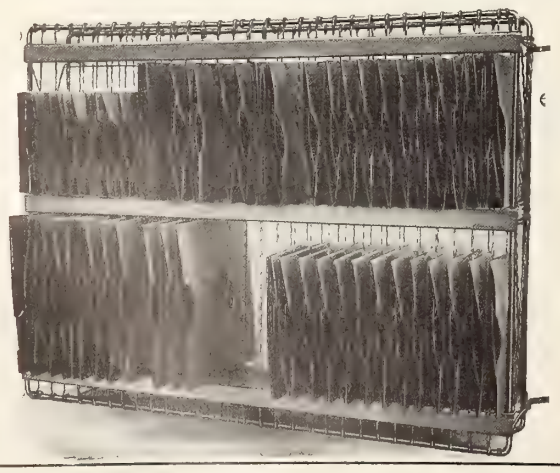
AN INTERESTING PUBLICATION.

The Christmas number of the Edison Phonograph Monthly is a most interesting publication. As a trade helper and stimulator this volume is of immense value. The latest issue is admirably balanced and reflects the greatest credit, both for its make-up and general contents, on L. C. McChesney, manager of the advertising department.

INCORPORATED IN NEWARK, N. J.

The Rawson Talking Machine Co., Newark, N. J., have incorporated with capital stock of $5,000. Incorporators: Frank T. Rawson, Geo. D. Ackerman, and William R. Williams.

SYRACUSE WIRE RECORD RACK No. 2A WITH BOARD SHELVES



This illustration shows our 2A rack with board shelving so that the envelope system for carrying the records can be used. This rack is an exact duplicate of our 2A with the addition of the wood shelving. If you have our catalog compare it with our 2A; if you have no catalog get one to-day.

Price of the Rack as Shown $5.25 (envelopes NOT included)

FILING RECORDS AN ART.

An Ingenious Method by the Use of Albums Has Been Successfully Worked Out—The Scheme Will Interest Dealers.

An ingenious method of filing disc records by the use of albums has been worked out by the inventor of the Echo record album, Louis Jay Gerson, buyer for talking machine departments for the Wanamaker stores, New York and Philadelphia, Pa.

The filing away of talking machine records is an art, and when developed to that happy condition where any particular record can be instantly found when wanted, and at the same time maintain a system of classification which will group records into classes of either composers, opera, singers, players, or style of composition, at the same time dispose of the records each in its particular place without confusion, this arrangement becomes most remarkable and convenient. It is a boon and indeed fills a long-felt want. This is just what the Gerson disc cabinet does.

Any cabinet becomes a Gerson cabinet when the old style racks are removed, and the space on the shelves is filled with Echo record albums. The average record cabinet designed to hold 200 10 or 12-inch disc records will hold eighteen Echo albums, nine on each shelf. As each album holds twelve records, the total capacity of the cabinet is increased to 216 records.

The style VI, herewith, is similar to the usual type of cabinet, but is fitted with leaded glass doors through which the backs of the albums may be seen. Its utility is apparent, and its beauty is much enhanced by the glass effect. These particular cabinets were designed for the trade of the Wanamaker stores, where many are being sold because of the convenience of handling records that are filed in these albums.

Sometimes albums are numbered consecutively 1, 2, 3 and upward, and other times, A, B, C, etc. In some cases customers prefer the albums labeled on the back with the names of the talent, for instance: "Caruso," "Melba," "Williams," sometimes "Sousa's Band," "Dance Music," "Sacred Selections," "Rag Time," "Harry Lauder." The arrangement can be followed in innumerable ways. Some record customers whose collections of records are numbered in the hundreds use the albums in connection with a card system. The albums are put in consecutive order and filed in the unit bookcase systems.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 10, 1909.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

NOVEMBER 17.

Amapala, 2 pkgs., $110; Belfast, 25 pkgs., $150; Beira, 1 pkg., $110; Berlin, 42 pkgs., $784; Callao, 2 pkgs., $113; Cape Town, 133 pkgs., $2,649; Cardiff, 20 pkgs., $150; Demerara, 8 pkgs., $276; Havana 4 pkgs., $252; Havre, 20 pkgs., $415; Kingston, 10 pkgs., $1,258; London, 35 pkgs., $4,386; 5 pkgs., $820; 338 pkgs., $9,589; Montevideo, 1 pkg., $101; Rio de Janeiro, 5 pkgs., $477; St. Petersburg, 8 pkgs., $107; 1 pkg., $137; Sydney, 12 pkgs., $253; Trinidad, 7 pkgs., $333; Valparaiso, 14 pkgs $1,471; Vera Cruz, 8 pkgs., $282.

NOVEMBER 24.

Berlin, 9 pkgs., $195; Guayaquil, 13 pkgs., $181; Havana, 4 pkgs., $175; Havre, 2 pkgs., $420; Kingston, 2 pkgs., $272; London, 24 pkgs., $2,051; 514 pkgs., $11,839; 4 pkgs., $600; Manaos, 7 pkgs., $539; Melbourne, 2 pkgs., $173; Progreso, 10 pkgs., $253; Puerto Barrios, 13 pkgs., $679; Rio de Janeiro, 5 pkgs., $228; 15 pkgs., $1,291; Savanilla, 24 pkgs., $1,493; Sydney, 42 pkgs., $1,125; Trinidad, 1 pkg., $215; Vera Cruz, 92 pkgs., $1,119; 289 pkgs., $5,701.

DECEMBER 1.

Berlin, 15 pkgs., $324; Buenos Ayres, 60 pkgs., $1,630; Cape Town, 121 pkgs., $4,813; Colon, 16 pkgs. $558; Demerara, 4 pkgs., $164; Havana, 5 pkgs., $142; London, 512 pkgs., $15,748; 2,708 pkgs., $24,043; Manchester, 9 pkgs., $900; Melbourne, 63 pkgs., $473; St. Petersburg, 7 pkgs., $123; Valparaiso, 21 pkgs., $1,035; Vera Cruz, 7 pkgs., $678; Vienna 1 pkg., $198.

DECEMBER 8.

Belize, 5 pkgs., $160; Berlin, 46 pkgs., $933; Bombay, 1 pkg., $100; Buenos Ayres, 85 pkgs. $10,149; Cartagena, 14 pkgs., $1,290; Hamburg, 35 pkgs., $833; Havana, 14 pkgs., $486; 2 pkgs., $324; Havre, 25 pkgs., $2,273; Kobe, 5 pkgs., $386; London, 806 pkgs., $12,336; 23 pkgs., $2,145; 6 pkgs., $104; 10 pkgs., $1,200; Rio de Janeiro, 12 pkgs., $1,240; Santos, 21 pkgs., $514; Shanghai, 3 pkgs., $164; Sydney, 58 pkgs., $3,158; 16 pkgs., $1,517; Tampico, 5 pkgs., $325; Trinidad 2 pkgs., $160; Valparaiso, 3 pkgs., $213; Vera Cruz, 268 pkgs., $8,222.

C. H. WILSON RETURNS FROM TRIP.

C. H. Wilson, general manager of the National Phonograph Co., Orange, N. J., who has been traveling through the West to the Coast with Mrs. Wilson since October 15, got back home December 10. The journey was one of business and pleasure combined, and in lieu of his customary summer vacation, which he was unable to take owing to the pressure of special business requiring his personal attention at the factory.

Such business as Mr. Wilson attended to was merely calling on a few of the prominent Edison jobbers as he passed through their part of the country to shake hands, feel the pulse of the trade, inquire about conditions, and size up the general phonographic situation. Mr. Wilson occasionally communicated with Orange by wire to tell the staff what a good time he and Mrs. Wilson were having. He went as far North as Winnipeg, Canada, and Tacoma, in the States, and South to San Diego, Cal. Coming East via the Santa Fe route they stopped to visit and view the wonders of the Grand Canyon in Colorado and other noted points of interest, and passed through Chicago, their last stop before reaching Jersey City, N. J.

Replying to an inquiry of The World regarding his trip, Mr. Wilson said Monday: "We had a splendid time, saw everything worth seeing, and are feeling fine. I met a lot of good people among our jobbers and dealers in a social way only, but found time to talk business a little also. I found conditions not only satisfactory, but the outlook very bright. I have not much that is new to say, but things are all right from a business standpoint. Found the factory away behind on orders when I got home, and I am afraid we will not catch up until after the first of the year."

EXTENSIVE COLUMBIA PUBLICITY.

January Announcements to Appear in 6,000,000 Magazines Read by Nearly One-Third of the Country's Population—Great Aid to the Dealer.

As is well known, the Columbia Co. have been and are carrying on a national campaign of advertising of wonderful scope in the interests of their varied lines of machines and records. The extent of the campaign can be realized from the announcement in this month's World that during January the Columbia advertising will appear in magazines with a total circulation of 6,000,000 copies. As it is claimed that each magazine is read by at least five people, it means that between twenty-five and thirty million people, nearly a third of the total population of the United States, will see the Columbia announcements. Just what this vast amount of publicity means to the dealers handling the Columbia line can readily be appreciated.

THE TALKER IN POLITICS.

Both Parties in Great Britain Use Machines in Campaigning for General Election.

The coming general election in Great Britain is particularly interesting from the fact that both the Tariff Reform League and the Liberals are using talking machines to a large extent in their campaigning and are finding the machines almost invaluable allies. The League was the first to adopt the talker and the idea was laughed at by the Liberals for a time, but the latter soon appreciated the value of the inanimate adjunct to the meetings of their opponents, and adopted the innovation themselves. Records were obtained from the Prime Minister, the Chancellor of the Exchequer and the President of the Board of Trade airing their views in favor of the Budget, and were scattered broadcast. As the records (Gramophone) were excellent and reproduced the voices of the prominent men perfectly, they have found a ready sale in all sections of the country.

NEW CONCERN IN EVANSVILLE, IND.

The Talking Machine Shop is the latest addition to the retail trade in Evansville, Ind., having opened temporary quarters at 513½ Main street, where they handle a complete line of Victor and Edison goods. W. N. Hollingsworth is manager of the business.

BUSINESS FOR SALE

FOR SALE—Music Business with Exclusive sale of Victor and Edison Phonographs; city 12,000; also, Pianos, Organs and Sewing Machines; doing fine business. Reason for selling, poor health. A money-maker for the right party. Store 24 x 80; steam heat; rent very reasonable. Address "Bargain," care Talking Machine World, 1 Madison Ave., New York.

Manager Desires Position

Position desired as manager of Wholesale Talking Machine Department, either Edison, Columbia or Victor. At present in charge of one of the largest Wholesale Talking Machine Businesses in the West. Desires a change as soon as possible. Best of references from present employers.

RECORDS BY

McCORMACK

The Great Irish Tenor

Announced for Sale in America Exclusively by the

COLUMBIA

PHONOGRAPH COMPANY

We announce herewith an exclusive series of Fonotipia records by the great Irish tenor, John McCormack, who appeared for the first time in America, November 10th, at the Manhattan Opera House, New York City, making an extraordinary impression. The records, which are with but one exception sung in English, are unmistakably the greatest of their kind yet issued.

McCormack is a native of Athlone, Ireland, and is the youngest of the really great tenors, being but twenty-five years of age. His success has been rapid and most pronounced. Leaping into fame in one night at a ballad concert in London, three seasons ago, he was at once thereafter engaged for operatic appearances in Covent Garden, and has been the idol of opera-goers in the British metropolis since that time. McCormack is an artist of exceptional versatility, having received his vocal training in Italy and singing Italian like a native, while at the same time it is said that there is no other living tenor comparable to him in the singing of Irish songs. His voice is a pure lyric tenor of remarkable sweetness, flexibility and power.

McCormack is a man of magnetic personality, entirely unspoiled by the wonderful success that has come to him and by the attention shown him by King Edward, with whom he is a great favorite. He is Irish to the core, and nothing apparently can alienate his affections from his native country.

The profound impression made upon the occasion of his American debut has been steadily strengthened by his subsequent performances, and with each new appearance his fame grows apace.

The charm of this young singer's personality and stage presence, the pure lyric sweetness of his voice, and his absolutely perfect mastery of vocal technique, have created a furore of enthusiasm among opera-goers in New York.

Double-Disc Records (Fonotipia Series) 10¾ inch, $2.50

F117	**Cavalleria Rusticana.** (Mascagni.) Siciliana. Sung in English. Orchestra accompaniment. **Tosca.** (Puccini.) "E lucevan le stelle." Sung in Italian. Orchestra accompaniment.
F118	**"I'll Sing Thee Songs of Araby."** (Clay.) Orchestra accompaniment. **Bohemian Girl.** (Balfe.) "When Other Lips." Orchestra accompaniment.
F119	**"Come Back To Erin."** Orchestra accompaniment. **"Killarney."** (Balfe.) Orchestra accompaniment.
F120	**"Mary of Allendale."** Arranged by H. Lane Wilson. Orchestra accompaniment. **"Savourneen Deelish."** Orchestra accompaniment.
F121	**"Like Stars Above."** (Squire.) Orchestra accompaniment. **"Roses."** (Adams.) Orchestra accompaniment.

TRIBUNE BUILDING, NEW YORK

THE TRADE IN THE HUB.

Entertainment for Employes and Friends of Eastern Talking Machine Co.—Library Style Grafonolas In Good Demand—New Caruso Records Provoke Enthusiasm—"The E. T. M. Associates"—A Case of Faulty Repairing—What Various Dealers Report.

(Special to The Talking Machine World.)

Boston, Mass., Dec. 8, 1909.

The Eastern Talking Machine Co. Associates and their friends spent a very enjoyable evening on December 2. The entertainment committee of the Associates have for some time been planning a surprise for the remaining members and in its results it left nothing to be desired. The entertainment consisted of vocal and instrumental solos by the following artists: Joseph Daly, piano solo; Fred Bond, selected songs, accompanied by Mr. Buitikan; Miss Florence Marble (of the office force), piano solo; moving pictures, courtesy of Mr. Downing; G. E. Reilly, comedian (enough said); Thomas Allen, of the Majestic Theater, and of "Lindy Lou" and "Any Rags" fame, contributed selections on the violin, and a few dialogue stories; illustrated songs, Joseph Kellar; Mr. and Mrs. Albert E. Brown in dramatic songs. Mr. Brown, by the way, is familiar to talking machine owners through the medium of the splendid recording of his fine "baritone voice." During intermission refreshments were served. The Victor Victrola entertained the audience with "I Wish I Had a Girl" and "The Hat My Father Wore," with incidental music by Mr. Allen and appropriate pictures by Mr. Downing. At the conclusion of the evening's entertainment it was unanimously voted to give the entertainment committee a wreath of roses spelled Success. W. J. Fitzgerald, chairman of the committee, was ably assisted by S. H. Brown, M. L. Read and E. A. Welch. The feature of the entertainment was the happy spirit that prevailed throughout the audience during the evening. The committee promises to be heard from in the near future.

Manager Erisman, at the Columbia warerooms, reports an exceptionally good business on the Grafonola Library style instrument, and says that the Grafonola cabinet style with Regina attachment is taking hold especially well. The Columbia's window display this month is rather odd, records and cabinets in it being frosted and the whole window arranged to represent a snow scene.

At the Oliver Ditson Co. Manager Winkelman is enthusiastic over the new Caruso records just received, and says the demand for them has taken a big jump this fall as the result of the opening of the new Boston Opera Co. He says that business as a whole is excellent.

The employes of the Eastern Talking Machine Co., who have formed what they call the E. T. M. Associates, had as their guest at the last meeting President William H. Beck, of the company. The old gentleman was greatly pleased with his reception and the enthusiasm of the members, and when he left Boston he declared with fervor that he had never before spent such a pleasant time in the city. He spoke particularly of the co-operation that exists among the employes. On the wall of the Victrola room, in which the meetings of the Associates are held, is shown the fine big moose's head that was presented to Manager Taft by a friend recently.

An evidence of the cause for failure on the part of some men in business was unearthed this week by the boys in the talking machine department of Houghton & Dutton's, when they were asked to locate the trouble in an Edison machine that had previously been repaired (?) by a small dealer in a suburban town. After much trouble and infinite pains, they found that the man had put in a weak faulty spring into the Edison machine, with the result that the owner had lost faith in the machine.

Business with the Eastern Talking Machine Co. is much improved over that of the corresponding month of last year. It has been found necessary to increase the space for Victor Victrolas owing to the increase in the sale of this particular type of instrument. A handsome department for Victrolas exclusively has been arranged on the third floor, finished in Mission, where they display all the different finishes of Victrolas, which makes a very attractive display. They expect that this year will close much more satisfactorily than that experienced in 1908.

The C. E. Osgood Co., of Boston, report a very healthy growth in their talking machine business and look for the future to demand additional space for the talking machine department of their business. Mr. Sylvester has been working very hard, but is much pleased with his results.

The Jordan-Marsh Co. have increased their space for the talking machine department since the erection of their new building, and intend to go out more actively for the talking machine business.

The Iver Johnson Sporting Goods Co. report a very satisfactory Edison business and are quite satisfied with the addition of their Victor department.

The Houghton & Dutton Co. report a considerable increase in their talking machine business over that of last year and predict that this will be their banner year in the talking machine business up to the present time.

It is reported that the Henry F. Miller Piano Co., of Boston, intend taking on the Victor line of talking machines and intend making extensive alterations to meet the requirements of that business.

GINGER FOR EDISON DEALERS.

National Phonograph Co. Offer Some Valuable Suggestions Applicable to the Trade During the Holiday Season—Should Push the Amberol Record Line.

The National Phonograph Co., Orange, N. J., recently sent the appended letter to Edison jobbers and dealers, apropos to the current season:

"To the Trade:—Edison dealers should now be alive to the fact that with the approach of the 'holiday season,' the possibilities of the Edison line are almost without limit, and while we feel assured our dealers will make an aggressive effort to obtain for themselves all the 'business in sight,' a few suggestions will doubtless be acceptable from us, in calling prominently to your attention a real money-maker—the 'combination attachment.'

"That numbered among your customers are possibly many who are still using the older type machines, adapted only for the two minute records, and we believe surprising results would be obtained if the combination attachment was called to their notice, pointing out that it would not interfere in any way with the use of standard records, but in addition would permit of the use of Amberol records, which play, sing or talk twice as long as the standard records; in fact—longer than any other record made. That the strongest argument you can offer to effect the sale of a combination attachment is on the record proposition, as the Amberol record costs but slightly more than the two-minute type, and affords double the amount of amusement, and as 'value received' is what the public is looking for, this feature can be used with telling results.

"That the Edison Amberol record list embraces such eminent artists as Victor Herbert, Johann Strauss, John Philip Sousa, Harry Lauder, Nat M. Wills, Bessie Wynn, Constantino, Riccardo Martin, Slezak and a host of other high-priced stars of the operatic, concert and vaudeville stage. That the sale of an attachment means a new and lasting customer for Amberol records, which, as you know, afford a profit of over 78½ per cent. and which should be an incentive for your most strenuous endeavors."

SPECIAL MULTINOLA EXPOSITION.

Representatives of the Daily Press and a Number of Talking Machine Men Enjoy Hearing This Instrument as the Guest of the Inventor, Dr. Geo. S. Iddings.

A special exhibition of the Multinola, the automatic multiple continuous phonograph, was given by Dr. George S. Iddings, the inventor, of Cleveland, O., at the Hoffman House, New York, on November 16, from 3 to 6 o'clock, to the representatives of the metropolitan newspapers and a few invited guests from the talking machine trade. The machine was shown in the Moorish room, and about 125 people attended, including a half-dozen women reporters. The doctor acted as host and provided a liberal supply of the creature comforts for the benefit of his visitors, who pronounced the fine work of the Multinola in connection with the clear and brilliant reproduction of the records very enjoyable. Those from the trade gave expert opinions in praise of his invention that pleased the doctor.

TALKER PLANT FOR SOUTH AMERICA.

Plans are now under way for the establishment of a manufacturing plant in one of the South American countries by a member of the "big three" companies. The cost of the factory, equipment and installation of the machinery, etc., will be a duplicate of the parent American company's recording laboratory, pressing and machine departments.

Needles Free To Prove Quality

"THE BEST THAT MONEY CAN BUY"

Playrite TRADE MARK

NEEDLES

"THE NAME TELLS WHAT THEY DO"

Best for VOLUME, TONE and LASTING QUALITY. PLAY RIGHT from START to FINISH. PRESERVE RECORDS and can be used on ANY DISK MACHINE OR RECORD. Packed only in RUST PROOF packages of 100. RETAIL, 10c. per 100; 25c. 300; 75c. 1,000.

BLACKMAN TALKING MACHINE CO.

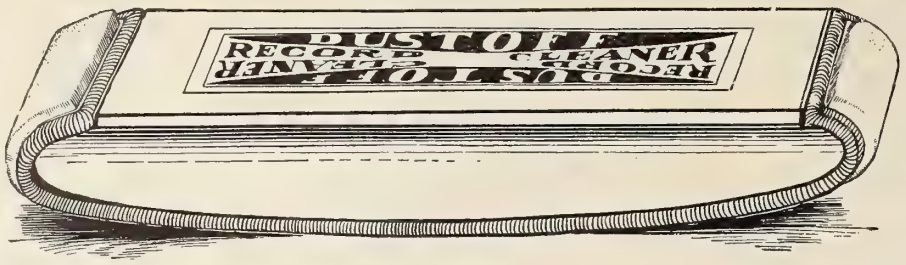
J. NEWCOMB BLACKMAN, President

97 CHAMBERS STREET NEW YORK CITY

Here's Something New—A Necessity to All Owners of Records

Its use keeps the tone of the reproduction pure and clear, free from all blurs, scrapings and harsh sounds caused by the settling of dust in the sound grooves of the records. The use of the "Dustoff" adds life to records, for by keeping them absolutely clean, only the minimum wear occurs, while they are being played.

THE VICTOR TALKING MACHINE CO. SAYS: "A piece of velvet carpet makes an excellent and cheap record cleaner, and should be used on all records before playing."



"DUSTOFF" RECORD CLEANER

A PROVEN SUCCESS — BIG SELLER EVERYWHERE

They retail at 15c. each and give you a good wide margin of profit. **Send to us for FREE samples, then order through your jobber,** as we do not supply the trade direct

TONE CONTROLLER COMPANY, - PROVIDENCE, R. I.

FREE CIRCULARS TO HELP YOU SELL "DUSTOFF" RECORD CLEANERS

We ship free circulars with your goods which tell all about "DUSTOFF" Record Cleaners and which will make many a sale for you.

TAKE HOLD OF THESE GOODS NOW THEY ARE PROFITABLE

"Dustoff" Record Cleaners are made of especially selected high grade velvet carpeting, having a soft, fine texture and a high nap which accommodates itself perfectly to the surface of all records. It is the only record cleaner that fits into and removes the dust from every minute groove and crevice without wearing or scratching the record in the least.

CARUSO STILL THE WORLD'S GREATEST TENOR

After Caruso's engagement last year at the Metropolitan it was greatly feared that his voice was somewhat impaired, but the great tenor has given ample proofs that his voice is as great and as beautiful as ever in the five exquisite records which he has made for the Victor Talking Machine Co. and which were just issued. Indeed, his voice is not only absolutely unimpaired, but it possesses an added beauty and softness, which is the result of his complete rest during the summer.

The skeptics have only to listen to these records to have all doubts removed, and to be convinced that the artist's voice is still unique and unequalled. These records were made immediately after the return of Caruso to this country, and before his appearance at the Metropolitan; therefore, they represent the artist at his very best. Nothing more beautiful, probably, can be imagined than his singing of "Mamma mia," a Neapolitan song. It is full of color and charm. In fact, discrimination is unfair for the other records—a ballad by Tosti, in French, and three superb operatic airs from "Forza del Destino" (The Force of Destiny), "Regina di Saba" (Queen of Sheba) and "Carmen"—are equally beautiful. It is not merely a pleasure, but a privilege, to have such a voice in the home.

We present herewith a picture of Sig. Caruso arriving at the Victor recording laboratory for the purpose of making these records. It may be well to state that Sig. Caruso has expressed the greatest satisfaction with the results of his latest efforts, and this is not to be marveled at, for they are indeed a revelation in the perfection of record making, both in the superb quality of voice and the freedom from imperfections of any kind.

CARUSO'S ARRIVAL AT RECORDING LABORATORY.
Front seat—Comm. Enrico Caruso; C. G. Child, Manager Recording Laboratory.
Rear seat—Harry O. Sooy, Chief Recording Staff, and Walter B. Rogers, Conductor Victor Orchestra.

DISC RECORD STOP

ANENT NEW EDISON RECORD PRICES.

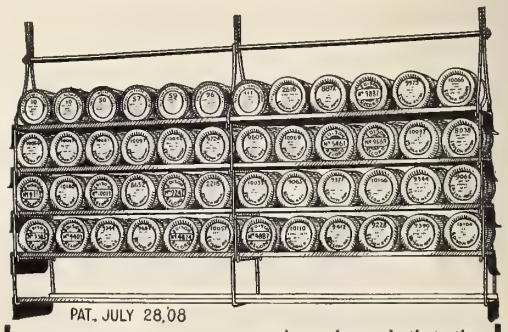
Notification Sent Out by National Phonograph Co. to the Effect That New Prices Will Be In Force After Dec. 31, 1909.

According to a recent notification sent out to their trade by the National Phonograph Co., Orange, N. J., relative to the new record prices that become effective on the first of the year, "jobbers will accept for as complete shipment as their stocks will allow, all bona fide orders for records, received up to and including Saturday, December 18, 1909, at present prices, subject to existing terms and delivery. Orders received on and after December 20 will be accepted subject to the express condition that such numbers as it is possible for the jobbers to ship up to and including December 31 will be billed at present prices, with usual terms and delivery; all unfilled balances to be cancelled. Positively no Edison records of any kind will be billed at old prices after December 31, 1909."

The company have also announced the list of two-minute records that will be dropped from their next catalog on February 1, 1910. This will give dealers ample time to dispose of any stock of those selections they may have on hand. The company add there need be no hurry in sending back this stock of cut-outs, as they may be returned for exchange at any time they may feel inclined.

LANDAY BROS. REMODEL QUARTERS.

Landay Bros., exclusive Victor distributers and dealers, 400 Fifth avenue, New York, have remodeled, refurnished and redecorated their place in a manner that reflects credit upon the judgment and excellent taste of James B. and Max Landay. Their floor is made more accessible from the avenue, and other improvements introduced that will be of material benefit to the business.



LIVE DEALERS have learned that the **SCHUBERT EXTENSIBLE RACK** is one of the best methods to start patrons to take care of their records, because it can be started with as few or as many shelves as may be needed and then added to as records accumulate.

Shelves are made of sheet metal, nicely black enameled, forming racks of any size ranging from 1 to 20 or more shelves, holding from 12 to 240 or more records in the most compact, safe, convenient place, at the least cost. Write your jobber for particulars, or to

G. H. SCHUBERT, 818 Madison St., Chicago

REVIEW OF DECEMBER RECORDS.

Issued by the Victor, National, Columbia and Universal Companies

The new Victor list for January contains a number of magnificent Red Seal selections which are destined unquestionably to add to the artistic value of the talking machine. These include the great "Aida" duet in two selections by Gadski and Caruso (89028-89029). These great artists are heard at their very best in these wonderful examples of Verdi's skill as a composer. Antonio Scotti, baritone, is represented by "Dio Possente" from "Faust" (88203). Scotti's "Valentine" is always a delight both vocally and dramatically, and this record presents him at his best. The latest and perhaps one of the most important acquisitions to the Red Seal galaxy is Nicola Zerola, the new tenor of the Manhattan Opera House, who is represented by two numbers, "The Barcarolle" (87036), and "La Rivedra Nell Estasi" (87037) from "Ballo in Maschera," and "Morte d' Otello" (88202) from "Otello." The list contains three new records by Gerville Reache, the famous contralto, "The Slavonic Song" by Chaminade and the "Card Song" from Carmen (87035-87039), and a selection from "The Queen of Sheba" (88205). Evan Williams, the favorite tenor, is represented by an English song "Absent" by Metcalf (64109). Liszt and Saint-Saens are featured by Louise Homer, contralto, in the "The Loreley" in German, and "Love Lend Me Thy Might" from "Samson and Delilah" (88204 88201). In the instrumental list two records by the Vienna Quartet are of special excellence—the favorite "Barcarolle" from "Comtes de Hoffman" (5754) and "Poeme Erotique" by Grieg (31760). Other instrumentals are the ballet music from "Faust" (58020) played by the Symphony Orchestra of Paris and a "Vision from Salome" (52023) by the Bohemian Orchestra of London. Two numbers from Pryor's Band which should interest are the "Festival Overture," Tschaikowsky (31759) and the Washington Gray's March" (5755). In the light operatic line there are potpourris sung by the Victor Light Opera Co. from "The Bohemian Girl," (31761) and "The Golden Girl" (31758). Reed Miller, the well known concert tenor, who has a big following in this country, is represented by "Roses in June," a charming song by Edward German (5753). The double faced record list for January contains many excellent numbers for orchestra and various special instruments. The list which appears elsewhere is worthy the close study of dealers. Taken as a whole it is an unusually strong one.

* * * *

A feature of the Columbia Phonograph Co.'s record list for December is ten records by John McCormick, the famous Irish tenor, who has scored such a great success at the Manhattan Opera House, who is represented by a number of well-known Irish and English ballads, as well as selections from Mascagni and Puccini. These are Fonotipia double-disc records running from F-117 to F-121. Two other Fonotipia double-discs are those made by Ferruccio Corradetti (baritone), and Francisco Vignas (tenor). The first-named sings "Il balen" from "Il Trovatore" and Reyer's "Ave Maria" (F-122) and Walter's song from Wagner's "The Meistersinger," and "O Paradiso," Meyerbeer (F-123). The Columbia 12-inch double-disc list includes selections from "Tannhauser" (Wagner), parts one and two, by Prince's Military Band (A5139); "Tyrolean Echoes," a trio for violin, flute and harp, and "Idilio," Lack (A5140). Two Christmas numbers which should have a wide popularity are to be found in the 12-inch Symphony double-disc list: "Nazareth" (Gounod), and "The Birthday of the King," by Neidlinger, both sung by Kirk Towns, baritone, with splendid effect. In the 10-inch double-disc list are also to be found a number of favorites embracing many well-known vocal and instrumental numbers which are in great favor these days. The double-disc list as a whole is up to the Columbia standard. In the Columbia Indestructible cylinder column twenty-four new numbers are listed, and represent many standard vocal numbers which will ever prove popular, like "The Last Rose of Summer," Mrs. Wheeler (1239); "Annie Laurie," quartet (1255); "Believe Me If All Those Endearing Young Charms," Mrs. Wheeler (1256). The list is well balanced between standard, popular and minstrel, or rag-time numbers. Nine special four-minute numbers have been added to the Columbia Indestructible list for January, two notable ones being the prologue from "Pagliacci" (3021), and selections from "Madame Butterfly" (3022).

* * * *

The National Phonograph Co. have started the New Year with an interesting budget of records. Their Amberol list for January contains three records in Italian: "Solenne in Guest Ora," La Forza del Destino (5002), by Francesco Daddi and Vincenzo Reschiglian; "Ciribiribin" (5010), by Maria Avezza and Francesco Daddi; "Alla Stella Confidante" (5014), by Francesco Daddi. This well-known opera singer and his associates have produced three excellent numbers which are destined to have a wide popularity. Another vocal number which should prove a favorite, in view of the renaissance now so evident in light opera in this city, is the "Gobble Duet" from "The Mascot" (332), by Elizabeth Wheeler and Harry Anthony. The same singers are heard in "The Ring o' Roses" from "The Dollar Princess" (328). "Lead Kindly Light" (341), by the Knickerbocker Quintet, affords an excellent record of this immortal sacred hymn by Cardinal Newman. Other Amberol records worthy of special commendation are Godard's "Berceuse" (339), played delightfully as a 'cello solo by Jean Schwiller; "The Monte Cristo Waltz" (333), played with rare abandon and finish by Jorda-Rocabruna Instrumental Quintet of Mexico. Victor Herbert's Orchestra is heard in the ballet music from "Mlle. Modiste" (330), which expresses the composer-conductor's idea of how this number should be played. Sousa's Band is represented in the "Washington Post" and "High School Cadets" marches (325), and the United States Marine Band have made a very excellent record in Wagner's "Maria Theresa March" (344). In the Standard record list there is also an excellent variety. The instrumental numbers which should meet with immediate consideration are a series of three numbers under the caption of "The Summer Girl" (10277), by Sousa's Band; "The Oriental March" (10280), by Victor Herbert and his orchestra; the "Kaiser Frederick March" (10296), by the United States Marine Band, and "Territorial March" (10288), by the National (London) Military Band. Mabel McKinley is in evidence with one of those ever delightful "mammy" songs entitled "My Li'l Sweet Sunbeam" (10289). Space forbids only a reference to some of the forty-five records listed, which include a medley of Irish reels as an accordeon solo (10284), by John Kimble, and two Edison Amberol records in Hebrew, made by Regina Prager (10000-10001).

* * * *

The list of zonophone double record discs for January, issued by the Universal Talking Machine Mfg. Co., contains four instrumentals—that is eight records in all—among which are Herbert's famous "Algeria" march (5574) and Linck's polka, "Take Me Along" (5576). In the vocal list there is a strong representation of the popular favorites of the day, including Herbert's "Rose of the World" from "Algeria" (5582), a Christmas double "Holy Night" and "I Look to Jesus" (5587). The latter is a duet by Stanley and Burr. Two old favorites are "Mary of Argyle" and "Gentle Annie" (5583), which always have followers, and two character sketches by Ada Jones and Len Spencer—"Queen of the Ranch" and "A Rag Time Tragedy" (5584). The list, which appears elsewhere in full, is worthy of consideration.

BALTIMORE TRADE GLEANINGS.

High Priced Machines Have the Call—This Is True of the Hornless Machines of All the Leading Makers—Expect a Good Holiday Trade—Other Items of Interest.

(Special to The Talking Machine World.)

Baltimore, Md., Dec. 6, 1909.

High priced machines and records of every description have taken Baltimoreans by storm in recent months. Their increased popularity is shown by the reports of the dealers, all of whom declare that there has been quite a boom in the trade. In fact, the statements of the tradesmen are to the effect that the holiday business this year will surpass that of several years past. Already the buyers have made their purchases, while there are any number who have signified their intention of selecting one or the other makes of talking machines as presents for friends.

Manager M. Silverstein, of the local branch of the Columbia Phonograph Co., declares that business has been remarkably brisk for this particular season of the year. He has a number of the high priced Columbia machines—the Grafonola De Luxe, Grafonola Regent and the Grafonola Elite in stock, and these have attracted the attention of prospective buyers more than the lower priced machines, although Mr. Silverstein reports a good sale of the cheaper instruments. The Grafonola Elite machine has proved especially popular, and the local manager expects them to make a creditable showing during the holiday sales. Operatic records have kept the Columbia force busy. This is due to the fact that Baltimore for the first time in many years has been favored by the inauguration of a season of grand opera. Those who attend the performances become so enthused with the musical productions that they take advantage of the first opportunity to buy records of the operatic selections they have heard.

The Victor and Edison dealers also report big demands for these high priced records. Manager Grottendick, of E. F. Droop Sons Co., states that the business for the month has been encouraging both with the Victors and Edisons. It has shown such an improvement in fact that the store has started to keep open at nights until after the holidays earlier than in former years. Other dealers, also, have started in with the holiday night work. The Victrolas are in great demand.

Manager Albert Bowden, of Sanders & Stayman's talking machine department, gives similar encouraging trade reports concerning Victor and Columbia machines and records. The firm have just received an allotment of the Grafonola instruments, which have proved to be big attractions.

Cohen & Hughes report a good trade for the month in connection with the sale of Victor machines and records.

HOW EVAN WILLIAMS GOT A JOB.

An interesting incident that shows the immense influence of the Victor is told by Evan Williams in his characteristic manner, as follows:

"While passing through a corridor in the Waldorf-Astoria, a man stopped me and asked if I was Evan Williams. He was the president of the Cincinnati Musical Festival, and he told me he was in search of a tenor. He brought Mr. Krehbiel, the musical critic of the Tribune, with him, and I sang 'Sound an Alarm' for them. On Sunday I went to Cincinnati, sang, and landed the festival."

Now follows the interesting part, which explains why they started after Evan Williams. He had been abroad to get a tenor, but returned without finding one. On his return, his son-in-law said, "Father, I have a tenor for the Festival—best in the world. His name is Evan Williams; come over and hear him." While abroad his son-in-law had bought a Victor and found for the Cincinnati Musical Festival the tenor they sought.—The Voice of the Victor.

(Special to The Talking Machine World.)

Chicago, Ill., Dec. 8, 1909.

The November talking machine business with the jobbers is generally reported to have been of a goodly and satisfactory volume. The latter part of the year has each month been better than the preceding one and infinitely better than the corresponding period of last year. With this gathering momentum as a criterion, the year promises to round out in a manner gratifying to even the most conservative. In several instances business during November is said to have eclipsed that of the same month of 1906, which was an exceptional month of a peculiarly strong year.

Jobbers have constantly noted the ever-increasing demand for the higher priced goods, which this year has perhaps reached a degree never before realized. Especially is this true of the goods ordered for holiday use. In fact, it has been so great that these departments of the great Eastern factories have been tested to their capacity and the procrastinating dealer this year will probably meet with futile attempts in trying to secure goods at his usual buying period.

Local retail trade, especially the latter part of November, has been excellent. The slogan of the daily papers, "Do Your Buying Early," is having its effect on the talking machine trade and a large volume of this business has already been done, the goods in many instances being held for delivery until after the 20th of the month.

Bouquets for George M. Nisbett.

That the citizens of our sister Republic are not devoid of the faculty that recognizes genius is noted by the following article, which appeared in the "Mexican Herald" issue of November 21, under the caption, "Mexico's Leading Entertainer," the photo of George M. Nisbett accompanying the article.

"Mr. Nisbett's claim for distinction is due to the fact that he has devoted his life to the pleasant task of bringing joy into the homes of the nation by means of the phonograph, which has become an almost indispensable article in every home that ranks above the very poorest. Mr. Nisbett thinks of the phonograph by day, and at night his dreams are filled with visions of what Mexico will be when, from one end of the nation to the other, there will be heard the melodious strains of the Edison phonograph playing the latest sections from the operas of the world. His idea of the millenium is that every man, woman and child shall have an individual Edison phonograph, and, by the way, Mr. Nisbett works for the spread of his cherished instrument there is no doubt that he is sincerely convinced that the possession of a phonograph by the family is the greatest guarantee of happiness, good will, long life and freedom from vice that can be had in any land. Statistics have amply proved that wherever the phonograph has been installed in a family the father and sons stay at home at nights and the girls have no trouble in getting sweethearts.

"Mr. Nisbett is the general manager of the Mexican National Phonograph Co., of Fourth Tacuba street, No. 33, this city. Just now he is very enthusiastic over the Amberol Edison records, which play twice as long as any others. Mr. Nisbett came to Mexico as general manager of the company last February. He has made lots of friends here, and he is looking forward to 1910 as the greatest banner year for the phonograph business. A notable instance of the pushing qualities of Mr. Nisbett was given when he secured the first and only record of the voice of President Diaz for the Edison phonograph, a feat which was accomplished a few months ago."

Immense Victrola Business.

Arthur D. Geissler, general manager of the Talking Machine Co., states that business the past month has been the largest in the history of the company. "Our Victrola business especially has been enormous," said Mr. Geissler. "The call for these goods, to an increasing degree, has been general from our trade throughout the country." As an instance of the territory covered Mr. Geissler cited a substantial order recently received from a prominent dealer of Newark, N. J.

Waters Succeeds Schofield as Manager.

The Dictaphone Co. of America, distributers of the commercial product of the American Graphophone Co., with offices in the Heyworth Building, whither they moved last spring, has just undergone a change of management. M. C. Waters, after a period of long and eminently successful service with the Cameron-Amberg File Co., of this city, succeeded Manager G. L. Schofield, who recently resigned to engage in the automobile business under his own cognomen. Mr. Waters assumed his new duties Dec. 1.

Lyon & Healy Figures Tell the Story.

Manager L. C. Wiswell, of the talking machine department of Lyon & Healy, when seen this month, had just received the figures of his department for November. He stated that the amount of business done last month was best realized by the fact that the total of the extraordinary November of 1906 was exceeded by a large margin. This increase, Mr. Wiswell says, was noted in both the Victor and Edison lines.

Alterations which have been in progress in the department for the past month are almost completed and the painters are now applying the finishing touches. The space occupied by the offices has been materially increased and Manager Wiswell now occupies a private sanctum sanctorum that has been fitted in an exceedingly attractive manner.

Ambassador McMenimen a Visitor.

Mr. McMenimen, sales manager for Sheip & Vandegrift, makers of the Music Master wood horn, spent a few days in the trade this month, leaving here for the West after booking a nice bunch of orders.

Columbia Indestructible 4-minute Records Liked

The new four-minute indestructible record of the Columbia Phonograph Co. is making quite a hit with the trade and sales to date have been very large. Wholesale Manager E. C. Plume placed one of the first orders for the product with the Schubert Drug Co., of Butte, Mont., who ordered 200 each of the first 20 records without even seeing them, so impressed were they by Mr. Plume's description of them. Substantial records from this concern have since been received.

Bissell-Cowan Co. Changes.

O. G. Searles has just succeeded E. R. Sues as manager of the talking machine department of the Bissell-Cowan Piano Co. Mr. Searles has been associated with the department since its opening and has shown himself to be ably fitted for the position. He made his debut in the talking machine business several years ago with the Talking Machine Co., leaving them to open a music store in his home town of Miami, Okla., which he disposed of a few months ago.

Arnold Off to Los Angeles.

A. O. Arnold, of the Arnold Jewelry & Music Co., Ottumwa, Ia., was in Chicago recently, and incidentally informed his friends that he had disposed of his interest in the company and would go to Los Angeles, where he would probably engage in the jewelry and talking machine business.

Rodgers Attends Freight Conference.

Mr. Rodgers, traffic manager of the National Phonograph Co., was in Chicago this month attending a meeting of the freight committee of the Trans-Continental Freight Bureau, which was in session here.

Evan Williams Hears Himself Sing.

Evan Williams, the noted tenor and Red Seal artist, called on Manager Wiswell, of the talking machine department of Lyon & Healy, the latter part of the month. He spent a very pleasant two hours and was very much impressed with the department and its employes. For Mr. Williams' edification, his well-known songs, "A Dream" and "Love Abiding," were placed on a Victrola. He subsequently left for the West, being booked for a recital tour.

He Is Not Dead but Singeth.

Mr. Williams, looking over the papers of his home city, Akron, O., about a month ago, was startled to see what appeared to be his own death notice, the name and initials being identical, the only discrepancy being in the age. Investigation proved that Mr. Williams' double unknown to him had lived at no great distanc from the artist's own domicile. Others besides Mr. Williams had already taken cognizance of the notice, and the rumor circulated that the Victor artist had passed away. He still meets people who for the moment think they are in touch with the spirit world.

Good Reports from Wurlitzer Co.

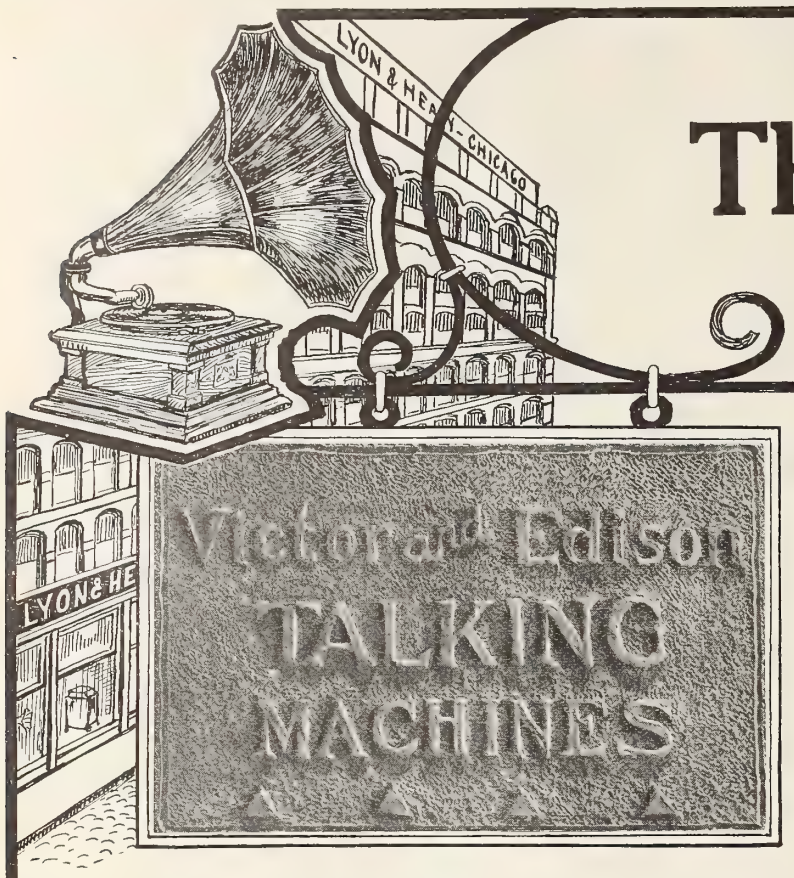
The handsome new quarters of the Rudolph Wurlitzer Co. are attracting considerable attention in the trade. Manager E. H. Uhl reports business as exceptionally good. F. H. Siemon was found inspecting the first shipment of the new Amberol grand opera records to arrive, and the assistant manager waxed enthusiastic in their behalf. L. Kean Cameron, manager of the retail talking machine department, has just had the scope of his activities increased and he now looks after all the retail business of the house. He has a handsome private office on the first floor. Recent acquisitions to the forces of the talking machine department are Bert Conroy, who though new to the "Talkers," possesses good selling ability; Dwight Watson, formerly associated with his uncle in the music business in Guthrie, Okla., and Miss Heller as record clerk.

E. C. Plume Always on the Go.

E. C. Plume, Western wholesale manager of the Columbia Co., left this week for Milwaukee. He will call on H. E. Kundy, the exclusive Columbia agent there, who recently purchased the branch store in the Cream City. Mr. Kundy, by the way, paid a visit to the Columbia headquarters the first part of the month.

Great Sales of "B. & H." Fiber Needles.

The B. & H. Fibre Mfg. Co. have everything to congratulate themselves on the business done in 1909. They have sold more needles this year than in the two preceding years combined, which certainly is evidence of the increasing popularity of the meritorious needle. They have letters on file written by some of the largest jobbers and dealers in the country congratulating them on the success of the fiber needle as evidenced by the sales made in their departments. The company are continually making efforts towards further improvement and development of the product. F. D. Hall, president of the company, intends leaving shortly for the East and



There Are Excellent Signs

of continued prosperity after the holiday season, and you, Mr. Dealer, can assure yourself of more than full measure, if you look after the expense "cuts" in addition to your gross sales.

¶ If you sell both the Victor and Edison goods, you will find that buying from LYON & HEALY means a saving in freight costs alone, worth while. The additional saving in time and money made possible, by the elimination of an extra order, or an extra letter, an extra unpacking, and an extra checking up, is also a matter worth considering.

¶ The LYON & HEALY stock of Victor and Edison machines and equipment is complete in every detail. This enables us to fill every order without any delay of any kind.

¶ Whether your want is a hundred needles or a car load of machines, we can and will handle it quickly and satisfactorily.

¶ Let us have the next "hurry-up-out-of-stock" order, which means more big business for you if filled promptly, and without chance of your customers finding fault. It isn't even necessary to state that it is a "hurry-up," for it will be taken care of as promptly as is possible under any circumstances, and remember that "Time is Money" to you as it is to us.

Our methods are appreciated by those who try them, as is evidenced by the fact that the November just passed shows a 22 per cent. increase over our best previous November, that of 1906

All Orders are Shipped on Day of Receipt

¶ Even if you don't place your orders with us, ask to be placed on our mailing list; you will see for yourself how we are continually on the alert to help our dealers garner the good things of life.

Lyon & Healy

CHICAGO

states that he will try to call on as many "B. & H." dealers as possible.

Starck Department Panning Out Well.

H. D. Bently, in charge of the talking machine department of the P. A. Starck Piano Co., reports business as coming to hand in a very gratifying manner and that the holiday trade is starting with a rush. The company are keeping up a rapid fire of strong advertising in the dailies. The two handsome demonstrating booths which have just been completed add to the already attractive appearance of the warerooms.

Malecki & Co. Moving to Ground Floor.

Louis B. Malecki & Co., dealers in musical instruments at 206 Wabash avenue, are preparing to move to their new ground floor location in the recently remodeled building at 272 Wabash avenue. Here they will handle, in addition to their regular line of pianos, a goodly outfit of Victor talking machines, cabinets and records. They expect to be in their new quarters in time to corral some of the holiday trade.

Oversold on Grafonolas.

Retail business with the Columbia Co. has been excellent this month and Manager Baer announces that they are heavily oversold on Grafonolas.

Arthur D. Geissler Enjoys Outing.

Arthur D. Geissler, general manager of the Talking Machine Co., returned this week from a ten days' hunting and golf trip in the vicinity of French Lick Springs, Ind. The country abounds with quail and 'possum, and Mr. Geissler enjoyed his first repast of the latter delicacy. It was a regular, old-fashioned Southern dinner, 'possum and sweet potatoes, but Mr. Geissler felt obliged to confess that it was not up to expectations.

Cooper & Co. Open New Department.

The new quarters of the talking machine department of Siegel, Cooper & Co. were formally opened on Saturday of this week. The main room, which is of substantial size, is flanked on either side by two sound-proof rooms, the Victor and Columbia on the left and the Edison and a recital hall on the right. The latter, by the way, will not be utilized for concerts until after the holidays, and in the meanwhile will be used as salesrooms for Victrolas, Grafonolas and Amberolas, a stock of each being kept there.

Orders Booked for 25 Amberolas.

Manager L. C. Wiswell, of the talking machine department of Lyon & Healy, says that they have already secured orders for 25 of the new Amberolas, which will be on sale about Dec. 15.

Has Recourse to Primitive Candle.

On Thursday of this week, about two hours before closing time, the quarters of the Columbia Co. were suddenly enveloped in a cloak of darkness, caused by the breaking of one of the electric wires. In spite of the fact that "Let the Lower Lights Be Burning" and "Lead, Kindly Light" were then being rendered, material rather than spiritual illumination was felt to be needed and recourse was made to the "primitive" candle, a substantial supply of the latter being hastily secured from a nearby store.

A Good Day's Sale.

An evidence of what is being done by the talking machine department of the Bissell-Cowan Piano Co. was noted this week in a single day's sales, which included two Victrola XVI., one Victrola XII. and one Victrola V. The company secured some strong publicity on the evenings of the 2d and 3d, when the Fine Arts Building, in which they are located, was thrown open for public inspection.

McCormack Records Will Be in Demand.

On the January lists of the Columbia Co. are a series of records by John McCormack, the well-known Irish tenor who, as recently as last week, appeared in recital in Chicago. Three of the winners on the list are "Come Back to Erin," "Mary of Allendale," and "Killarney."

NATIONAL CO.'S SALES FORCE.

List Printed in Full for the Benefit of the Trade.

In order to protect the trade by eliminating the possibility of any misrepresentation, the National Phonograph Co., Orange, N. J., announce an official list of their salesmen and the territory assigned to each as follows: J. H. Allgaier, Missouri; B. R. Barklow, Manhattan and all south of Albany, N. Y.; A. V. Chandler, Illinois; H. D. Clark, New Jersey, Delaware, Maryland and District of Columbia; A. H. Curry, Arkansas and Oklahoma; F. W. Ewan, Toronto and Provinces of Ontario, Canada; F. E. Gage, West Virginia, Kentucky and Tennessee; J. H. Gill, California, Arizona and southern New Mexico; G. A. Hedden, New Hampshire, eastern New York and Vermont; F. H. Hird, Iowa; W. P. Hope, Wisconsin, upper Michigan, Alberta, Manitoba and Saskatchewan, Canada; F. L. Hough, Minnesota; W. H. Hug, Ohio; W. A. Idle, northern Wyoming, Montana, Idaho and Utah; A. H. Kloehr, Kansas; M. G. Kreusch, Indiana; C. E. Lyons, Washington and Oregon; L. W. McDonald, eastern Provinces of Canada; E. A. Neff, Texas; C. W. Phillips, North and South Dakota; G. A. Renner, Nebraska, Colorado, southern Wyoming and northern New Mexico; J. W. Scott, Connecticutt, Rhode Island, Massachusetts and Maine; H. R. Skelton, Michigan; F. H. Stewart, Mississippi and Louisiana; J. F. Stanton, Pennsylvania; C. P. Trundy, western New York; C. D. Warren, Virginia, North and South Carolina.

SAVING TIME A SUCCESS FACTOR.

Time saving, which means the intelligent use of time, is undoubtedly one of the great factors of success in any walk of life; and that is why inventive genius is kept busy devising means to multiply the values of a day. Anything that enables a man to do more with less effort saves time and energy, and permits him to undertake much that was impossible before. The steam engine, the telegraph, the telephone, the automobile, the electric motor, the typewriter, the perfected printing press, etc., are time savers that in fifty years have done more toward the development of civilization and the increase of the world's wealth than had been accomplished in 1,000 years of effort before these economists of time were introduced. Whatever saves time increases convenience and limits the waste of mental or physical energy, adds to the money making power of the world and becomes a business necessity. And as new inventions are put upon the market, new needs arise and new methods must be introduced to utilize them.

THE PHONOGRAPH IN THE ORGAN LOFT.

"I hear that your church has installed a phonograph stuffed with sacred music."

"Yes. Had to do it. Choir had struck."

"New scheme work all right?"

"It's beautiful. Never quarrels with itself, has no skirts to rustle, doesn't fret about the angle of its hat, refrains from giggling or powdering its nose, and if it gets out of order a mechanic can repair it."—The Edison Phonogram.

Small Christmas Window.

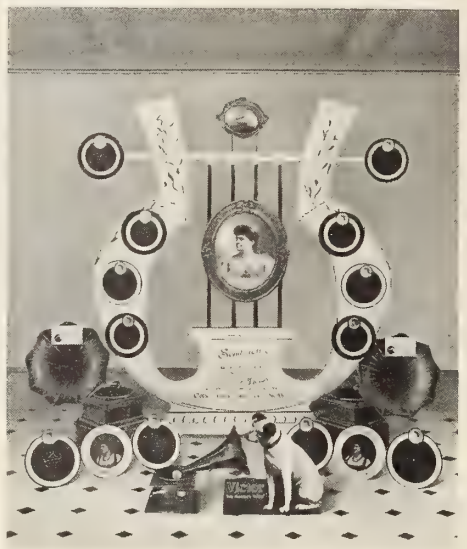
THE GROWTH OF AN IDEA.

How Victor Ready-Made Window Displays Jumped Into Immediate Popularity.

The great improvement in the art of window dressing is really remarkable. Like department store advertising in the daily newspapers it has grown steadily and artistically until it has come to be a most important adjunct of the up-to-date and modern retailer. To-day one may walk along the great retail streets in any city in the United States and see artistically displayed almost everything from a penny necessity to a collection of priceless luxuries. Even the big hotels and restaurants have the interior of their dining rooms exposed to passers-by as a temptation to indulge in the viands of their establishment.

It has always been generally accepted that the Victor Co. never do anything by halves, but particularly is this assertion applicable regarding the wonderful advertising that has, in so short a time, spread the fame of the Victor to every corner of the globe.

Realizing that the established and rigid policy of selling nothing direct to the consumer makes their success wholly dependent on the success of their dealers, the Victor Co. have spared no expense or effort to give to every dealer a thorough knowledge of the Victor and of Victor records, and to lend to dealers every assistance possible in marketing the product of their factories.



No. 14.
SembrichWindow.

Not overlooking the Victor Co.'s salesmanship lessons (now published in book form)—how to sell Victors on the instalment plan—their immense distribution of ready-made newspaper advertisements (electrotypes being furnished to all dealers on request), there can be no question but that the window display idea recently inaugurated is one of the biggest helps ever rendered the dealer. For it has well been said that almost every dealer's biggest opportunity is right at the front of his store—his show windows.

Less than a year ago they engaged Ellis Hansen—undoubtedly one of the best window dressers in America—and it was originally intended that Mr. Hansen should visit cities and towns and demonstrate to dealers the advertising value of their show windows by giving practical instructions in window decoration. In this way it was thought to develop and improve window dressing generally, with the hope that it would ultimately extend beyond the cities visited.

While preliminary arrangements were under way the possibilities of the proposition became more apparent and the original plans gave way to the more advanced idea of reaching the entire

trade simultaneously and as a whole. Then it was a boy and a card writer was added to Mr. Hansen's workshop. Shortly thereafter, a carpenter and one painter brought the window display force up to five people. This proved to be only the beginning.

One week after the issuance of their catalog of the first ready-made windows, it was necessary to augment the working force materially and to add a packing and shipping department to handle window displays exclusively, and at the present time there are twenty-seven people employed in this window display department alone.

The rapid expansion of this branch of the Victor Co.'s publicity department is well understood on referring to the series of accompanying photographs.

The ready-made window display, issued in connection with the record made by Dr. Cook, demonstrated conclusively that the special window, devoted to one particular thing, or artist, or in commemoration of one particular time, such as Thanksgiving day or Christmas, is the true way for the dealer to gather the real profits from the show window display.

The group of windows Nos. 1, 3, 8 and 11 are examples of ready-made window displays that have enjoyed the largest demand. Hundreds of these windows have been shipped to Victor dealers, and each day many orders are received for the three special Christmas windows that were announced by a circular printed in colors. The cost of issuing this circular alone was in excess of $500.

They are at present at work on a series of windows, covering the concert tours of Sembrich, Maud Powell, Mischa Elman, Whitney Bros.' Quartette, etc., to be brought to the attention of dealers one to two months in advance of the date they are to appear in each city, so that dealers may have ample time to obtain the material in advance of the concert, and make their display just at the time when the advertising of the concert has made it an event in each locality. The Sembrich window, No. 14, is a specimen concert artist window.

The success of the Victor Co.'s ready-made window display idea is assured, and the only wonder is that they are able to supply the demand. They certainly would not be if every dealer took advantage of this great opportunity.

The Victor Co. are maintaining at a big expense for the benefit of their dealers what is probably the most extensive and best-equipped window display department in the whole world; and dealers, for an almost insignificant sum, are enabled to secure all the benefits of this up-to-date window display department, just as though it was part of their own store.

Some of the plans the Victor Co. have under way for the show windows of their dealers will certainly attract widespread and universal attention, and it behooves every dealer to wake up and get next to this exceptional opportunity to make his show window return a lot of interested customers.

CHRISTMAS RECORDS.

A Specially Prepared List for the Benefit of Edison Dealers—Suggestion Worth Following Up—Will Benefit Customers.

The National Phonograph Co. have prepared a special list of records for the holiday season, which will be found most convenient for dealers desiring to offer suggestions to their customers as to what they should buy for their Christmas reunions. The list is as follows:

Amberol—62, Calvary, Harry Anthony; 124, Jerusalem, Edison Mixed Quartette; 188, Holy, Holy, Lord God Almighty, Edison Mixed Quartette; 305, Angels from the Realms of Glory, Edison Concert Band; 12,098, The Dawn of Light, Elite Mixed Quartette; 12,099, Nazareth, Peter Dawson; 12,100, Sweet Christmas Bells, Ernest Pike and Peter Dawson; 12,101, Christmas Morn, National (London) Military Band; 12,102, Star of Bethlehem, Ernest Pike; 12,103, A Miner's Dream of Home, Peter Dawson and Mixed Quartette.

Standard—8,270, Santa Claus Song, George P. Watsin; 8,708, Old Jim's Christmas Hymn, Campbell and Harrison; 8,837, O Come, All Ye Faithful, Edison Male Quartette; 8,854, Ring the Bells of Heaven, Edison Chimes; 9,156, Star, Beautiful Star, Anthony and Harrison; 9,168, Silent Night, Edison Male Quartette; 9,410, Joy to the World, Edison Concert Band; 9,431, Down on the Farm, Ada Jones and Len Spencer; 9,703, Ring Out the Bells for Christmas, Edison Concert Band; 10,008, Christ Is Come, Edison Concert Band; 10,030, Christmas Morning at Clancy's, Steve Porter; 10,257, While Shepherds Watched, Edison Concert Band.

Apart from the publicity which these records will have through the usual printed matter sent out by the National Phonograph Co., it would be a good idea for dealers to send special letters to their customers, in which they could emphasize that the enjoyment of the Christmas season could be made still keener by having in their possession the list of Christmas records, of which a list might be enclosed.

NEWS OF THE TWIN CITY TRADE.

Best Talking Machine Season Ever Experienced in the Northwest Keeps Dealers Moving Lively—What the Various Houses Have to Report Anent Conditions.

(Special to The Talking Machine World.)

St. Paul and Minneapolis, Dec. 8, 1909.

Never in the chronicles of the Northwest have talking machines produced so much activity as at present. All those whose income depends wholly or in part on talking machines are extremely glad that they are financially interested in these contrivances. The busiest people in the Northwest, and this statement is made without reservation, are those who devote a major share of their time to talking machines.

A few interviews obtained to-day will quickly substantiate any statement contained in the foregoing:

"Our talking machine force has been working overtime for some time," said W. J. Dyer, of W. J. Dyer & Bro., 'and the month of November will easily show a banner record. Last Saturday, for instance, the cash business amounted to $1,100. This may not be so much in the East, but it helps some in St. Paul."

"We have doubled our force, and still we can't keep pace with the business," said Lawrence H. Lucker, of the Minnesota Phonograph Co. "We can't begin to fill orders within the specified time. Both the jobbing and retail trade is good. There is considerable interest in the much-advertised Amberolas, and we expect to do a nice business in that line if we can ever get any."

J. H. Wheeler, northwestern representative for the Columbia Phonograph Co., says that the jobbing business is better than the retail business. The former is the greatest in the history of the home house in the Northwest. "There is only one complaint," says Mr. Wheeler, "and that is that we can't get certain supplies fast enough. The new four-minute indestructible records are having a great vogue here, but we could use 100 per cent. more than we are getting."

PETMECKY SUPPLY CO. ORGANIZED.

The Petmecky Co., of Austin, Tex., Victor distributers, have incorporated under the title of the Petmecky Supply Co., Inc., with a capital stock of $50,000, with the following incorporators: President, Fred Petmecky; vice-president and general manager, B. F. Reeves; secretary and treasurer, E. E. Hill. The new company will devote their entire time and capital in exploiting and promoting the Victor line in Texas and Oklahoma.

NEW BEDFORD, MASS.

TRADE NEWS FROM ST. LOUIS.

Reports Indicate That December Will Break Business Records—Columbia Grafonolas in Great Demand—St. Louis Talking Machine Co. Selling All Victrolas They Can Get Hold Of—New Caruso Records Liked—Johnson Giving Victrola Concerts—Recent Visitors—Black a Victor Hustler.

(Special to The Talking Machine World.)

St. Louis, Mo., Dec. 8, 1909.

General trade conditions in the talking machine business are reported to be excellent, and it looks as if the month of December stands to break all previous records for a similar length of time. High-priced machines are selling well and the record trade is brisk.

Manager E. B. Walthall, of the Columbia Phonograph Co., reports that their wholesale trade all over the territory is very good, and that their retail trade for November was splendid, with a strong demand for the high-priced goods. He states that they have been unable to fill orders for the De Luxe and Regent $200 and $225 machines. Mr. Walthall also states that the trade outlook for December is very bright, and that they are figuring on having the banner month in the history of the local store.

F. G. Cook, traveling salesman for the Columbia Phonograph Co., has been taking some good orders on the trip he is now on.

The St. Louis Talking Machine Co. report the largest volume of business ever done in the month of November, both wholesale and retail. The demand was greater for the higher-priced instruments, the Victrola leading. Both the style XIV and style XII Victrolas were ready sellers, and orders were taken for special wood finishes in the style XVI. These were ordered for Christmas delivery.

O. A. Gressing, manager of the St. Louis Talking Machine Co., is enthusiastic over the outlook for the holiday season. Their dealers are ordering in a most liberal and gratifying manner. In spite of their tremendous stock, Mr. Gressing's only apprehensions are for lack of machines and records to supply their dealers, and no fears whatever for the volume of business that will be done.

The new Caruso records were received with a rush by the customers of the St. Louis Talking Machine Co. On the morning of the 27th, when their customers were in receipt of the regular monthly letter which this company issues, and in which the new Caruso records were announced, upwards of seventy-five orders were received by telephone before 11 o'clock.

The Victor Ready-Made Thanksgiving window display which the St. Louis Talking Machine Co. had in their window was one of the most striking ever seen on Olive street. These Ready-Made displays have proven a great attraction and, no doubt, the most profitable of advertising. The displays are changed weekly by this wide-awake firm, and it seems that every new one outdoes the one which preceded it. Manager Gressing promises that their Ready-Made display for Christmas will outdo them all.

L. A. Cummins, traveler for this company, returned from one of the most successful trips he ever made with an order book filled to the brim, in which were included a number of Victrolas and an Auxetophone. Mr. Cummins will confine himself to the immediate neighborhood of St. Louis until the holidays.

S. H. Johnson, of this company, has been devoting a great deal of time after business hours to giving Auxetophone and Victrola concerts. Among those given were:—one to the St. Louis Credit Men's Association, at their regular monthly meeting; also the Missouri Pharmaceutical Association, and several of the most exclusive West End clubs.

Recent visitors to the St. Louis Talking Machine Co. were Joseph Hilliard, Hot Springs, Ark.; S. M. Field, of S. M. Field & Bros., Little Rock, Ark., who stopped off for Thanksgiving on his way home from a hurried trip to New York; W. W. Fisher, Murphysboro, Ill.; F. C. Cochran, manager of the Piggott Music and Novelty Co., Piggott, Ark.; Chas. A. Tate, Flora, Ill.; Mr. Thorne, of the Globe Mercantile Co., Moberly, Mo.; Mr. Robinson, of the Dale Hardware and Implement Co., Fayette, Mo., and C. M. Boyer, Pacific, Mo.

W. A. Brenner, of the Koerber-Brenner Music Co., returned recently from a ten days' business trip to Kansas City. This firm report that their talking machine business for November has been very satisfactory, and they look for a big trade through December.

The Knight Mercantile Co. report their trade to be fairly good. This firm recently filled an order from Panama.

The Thiebes-Stierlin Music Co. report an active trade in their talking machine department, and that it favors the high-priced machines.

H. J. Berlin, manager of the talking machine department of the J. H. Buettner Furniture and Carpet Co., reports that they are having a nice trade. They are giving recitals on high-class records from time to time and with good success.

Miss Sadie Rosenblatt, formerly in charge of the talking machine department of the May-Stern Co., has resigned and is now with the talking machine department of the J. H. Buettner Furniture and Carpet Co.

J. Ed. Black, of Springfield, Mo., has proven one of the most wide-awake and enthusiastic exponents of the Victor that the St. Louis Talking Machine Co. has among their list of dealers. Mr. Black has been conducting a series of Victrola recitals and has been giving these before the most prominent club women, churches and schools in Springfield. On November 10 Mr. Black gave a concert for the members of the Drury Chapel. On November 15 he gave a concert under the auspices of the Delta Theta of the Teachers' Training Class. On November 17 he conducted a Victrola recital at the Bowerman School, and on November 19 Mr. Black gave a grand opera concert under the auspices of the Pilgrim Sunday School. Mr. Black has also arranged for several concerts during the month of December. He reports the greatest results imaginable, and is greatly pleased with his success.

O. A. Gressing, manager of the St. Louis Talking Machine Co., returned recently from a week's successful business trip to Evansville, Ind., and other points.

D. K. Myers, the well-known Zonophone jobber, reports trade for November fair, and he looks for a good trade during the month of December.

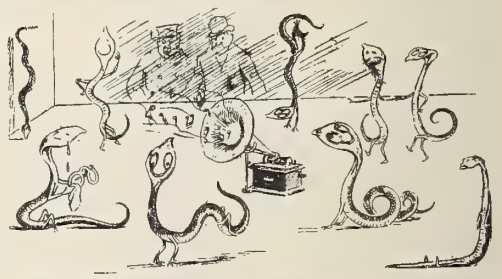
PHONOGRAPH CHARMS SNAKES.

Curator Ditmars Gives the Cobras a Homelike Sunday Concert.

They had a real snake-charming party at the Bronx Park Zoo recently, and when it was over Curator Ditmars voted it a great success. Several months ago Mr. Ditmars, who has got together an animal and reptile circus, sent to Singapore and obtained several phonographic records of the music made by Hindu snake charmers in performing their tricks with reptiles. The records arrived on Saturday.



Mr. Ditmars gathered some of the keepers the next day, got out a few cobras and other poisonous snakes from the Far East, and turned on his music. The snakes began to take notice right away. One of the big king cobras raised his head high in the air and glided across to where the phonograph rested. The reptile eyed the machine curiously, and its head began to wave to and fro, keeping time to the weird strains of music.

Several of the other snakes joined him, just in front of the metal horn from which the music emerged. Mr. Ditmars turned on record after record, and after a while the snakes seemed to be in a hypnotic state. They did not wake up until they had been put back in their cages.

Sunday is usually a busy day for news in the reptile house, and the last was no exception. When the keepers arrived in the morning and started to enter a small annex to the east of the building, they drew back in alarm. On the floor of the annex was a heap of straw and shavings, which seemed to move up and down, as though some monster was beneath and breathing heavily. The woodwork in the room appeared to have been chipped, as though by a chisel. Here and there on the floor were chips of wood.

One of the keepers got a steel net. This was placed over the pile of straw and shavings. There was quite a commotion, and a big sabre-toothed rat, a pet of Mr. Ditmars, emerged from the heap. It had escaped from its cage during the night.

RECORD BULLETINS FOR JANUARY, 1910

EDISON AMBEROL RECORDS.

HAWTHORNE & SHEBLE CO. AFFAIRS.

The meeting of the creditors of the Hawthorne & Sheble Mfg. Co., bankrupts, was held at the office of Joseph Mellors, referee in bankruptcy, 5-8 Walnut street, Philadelphia, Pa., on December 10 at 10.30 a. m., for the purpose of considering petitions of trustee for leave to sell a portion of the personal property of this estate at private sale.

LEO SLEZAK A SENSATION.

The National Phonograph Co.'s Prophecy Fulfilled—Slezak Stirs Metropolitan Audiences as Has No Other Tenor Since the Days of Tamagno—Records Will Be Big Sellers.

When the National Phonograph Co., in announcing that they had entered into an exclusive contract with Leo Slezak, the giant Czech tenor, predicted that his appearance in grand opera circles in this country would be in the nature of a sensation, very few of its dealers, or in fact of the trade in general, realized how much truth that prophecy held. Many, perhaps, attributed the statement to enthusiasm caused by

LEO SLEZAK.

the flattering reports of his success across the water that accompanied the announcement. That the company knew whereof it spoke was most convincingly proved on the night of November 17, when he made his initial appearance at the Metropolitan Opera House, New York City.

The opera in which Slezak elected to make his American debut was "Otello," revived after an interval of seven years, and in which he sang the exacting part of the jealous Moor. When he strode upon the stage, his six feet five inches of stalwart manhood emphasized by his flowing robes, the audience fairly gasped its astonishment at a spectacle so prodigious. Being a tenor, it might have been expected that the high notes would emerge with almost ludicrous effect from so tremendous a frame, for more often than not the voice of a physical giant is thin and piping.

His very first notes, however, set all doubts at rest. He fairly electrified his audience as the performance proceeded by his magnificent presence, his splendid tones and perfect control. With equal beauty and facility his voice expressed the tenderest passion or dramatic intensity the part demanded, while his enunciation at all times was a constant delight. Dramatically his performance was pronounced superior to anything ever seen on the stage of the Metropolitan. The following extracts from the New York press criticisms will convey some idea of the impression he created upon his audience.

Out of the aggregation of singers, his gigantic figure looming high like a giant of mythology, emerged victoriously Leo Slezak, the most imposing dramatic tenor New Yorkers have heard since the days of Tamagno. In the intermission his name was on every lip and his appearance before the curtain at the end of each act was a signal for tumultous applause.—New York Press.

His voice is tremendous in its dramatic moments, and when he employs it lyrically it is fresh and beautiful in its quality. He has been compared to Tamagno and his voice has some of the brutal dramatic strength of that famous tenor, but it is far more beautiful in moments of tenderness.—New York Herald.

His second appearance in the same role was the occasion of an even more remarkable demonstration than that which greeted his first triumph, while his singing of the difficult declamatory aria, Di quella Pira, in Verdi's "Il Trovatore" on the evening of December 1 effectually removed any suspicion of his being a one-part singer. Of his performance on that occasion the New York Globe and Commercial Advertiser said in part:

"As on the occasion of his first appearance here, he disclosed a full, powerful, vibrant and manly voice of fine dramatic quality, while both his phrasing and enunciation commanded something more than mere respect. He sang all the famous airs of Manrico with fine effect, concluding the 'Di quella pira' with a high C that brought the curtain down with a storm of applause in which even the members of the orchestra joined. Seven curtain calls followed this act."

The National Co. can feel justly proud of their enterprise in securing so magnificent a voice for their records, and the jobbers and dealers are to be congratulated on the fact that, through the company's admirable foresight, ten Amberol records, comprising some of the great tenor's best selections, became available on December 1. Their sale value will be immensely increased by reason of this opportune arrival. Six of the records are sung in Italian and four in German, two of the former being the famous Morte di Otello and Ora a per Semper from "Otello."

The National Co. state "These records are perfect in every essential of rendition and reproduction and they will undoubtedly command a heavy sale. Their appearance, coincident with the formal introduction of the company's handsome new machine, the Amberola, to the public, places the Edison dealer in a position to make an irresistible appeal to lovers of high grade music who cannot fail to be impressed by the superior tone quality and artistic appearance of the Amberola and by the fact that the Amberola grand opera records are the longest playing records on the market."

The National Co. holds a contract with Slezak, covering a number of years, by the terms of which it has exclusive right, for talking machine record purposes, to his entire Italian and French repertoire, as well as to all selections used by him on his present American tour.

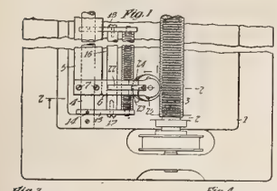
LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., Dec. 10, 1909.

PHONOGRAPH. John F. Ott, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,271.

This invention relates to phonographs and has for its object the provision of means whereby the traveling carriage which carries the reproducer or recorder may be fed at either of two desired rates of speed, so as to adapt it to operate, for example, upon records having one hundred and two hundred threads per inch, and said means are preferably designed so that they may be readily applied to phonographs of ordinary construction, such as are now in general use throughout this and other countries.



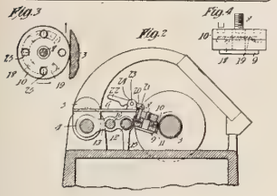


Figure 1 is a plan view of a portion of a phonograph to which the invention is applied; Fig. 2 is a section on line 2—2 of Fig. 1; Fig. 3 is a detail plan view of the rotary member which engages the feed screw of the phonograph, and Fig. 4 is a side elevation of the same.

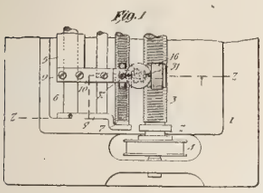
PHONOGRAPH.. John F. Ott, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,272.

This invention relates to means adapted to cooperate with the feed screw of a phonograph for imparting a progressive movement to the sound box carriage and comprises interchangeable means for feeding the same at either of two desired rates of speed, as, for example, at speeds suitable for operating upon records having either one hundred or two hundred threads per inch.



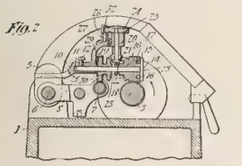


Figure 1 is a plan view of a portion of a phonograph showing the invention applied thereto, and Fig. 2 is a section on line 2—2 of Fig. 1.

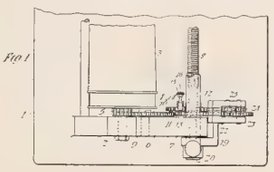
PHONOGRAPH. John F. Ott, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,265.

This invention relates to phonographs of the type wherein the sound box is carried on a traveling carriage to which a progressive movement is imparted by means of a rotating feed screw, so that the reproducer or recorder stylus traces a spiral path with respect to the record surface. It has been the usual practice for many years to provide a feed screw of fine pitch which advances the traveling carriage a distance of one one-hundredth of an inch for each revolution of the mandrel. More recently, however, it has been found possible to manufacture a sound record in which the record groove has two hundred turns or threads to the inch, so that it is desirable to provide a phonograph in which the feed of the carriage will be suitable for operating upon a record of this description. In view of the fact, however, that there are already thousands of phonographs in use in which the feed screw advances the carriage one one-hundredth of an inch per mandrel revolution, and a vast number of records are also in use having a pitch of one one-hundredth of an inch, it is desirable to provide means which may be readily applied to such phonographs whereby the feed screw may be driven at one-half the speed at which it has heretofore been driven, such means also permitting the driving of the feed screw at its usual speed, so that the phonograph can be used interchangeably with sound records having either one hundred or two hundred threads per inch, and the invention has for its object the provision of interchangeable means of this character which may be readily applied to a phonograph and in which, when so applied, the parts may be readily shifted with respect to each other, so as to drive the feed screw at the desired rate of speed.



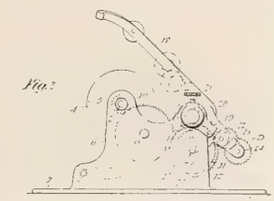


Figure 1 is a plan view, partly in section, showing a portion of a phonograph constructed in accordance with the invention, and Fig. 2 is an end elevation of the same.

FEEDING MECHANISM FOR PHONOGRAPHS. John F. Ott, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,273.

This invention relates to useful improvements in phonographs, and particularly to mechanism by which a variable feed may be imparted to the carriage, whereby the instruments may be employed for the reproduction of records, for example, of the present standard pitch of one hundred threads per inch, as well as records of a different pitch, say, two hundred threads per inch, and designed for use with the Standard type.

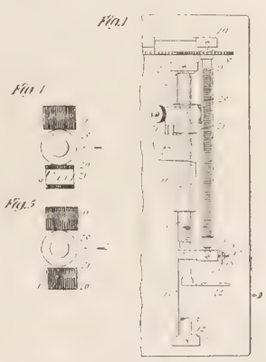

Figure 1 is a plan view of a portion of a Standard phonograph with the present improvements applied thereto; Fig. 2 a cross-sectional view showing the parts in the position which they occupy when a differential feed movement is applied to the carriage, for instance two hundred threads per inch; Fig. 3 a corresponding view showing the parts in position to be fed directly by the feed screw; Fig. 4 an enlarged detail view illustrating the feed screw, worm, and abutment, in position to effect a differential feed; and Fig. 5 a corresponding view showing the same parts in position to effect a direct feed. In all of these views, corresponding parts are represented by the same numerals of reference.

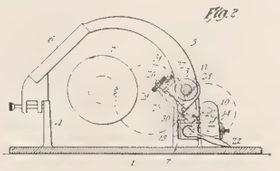
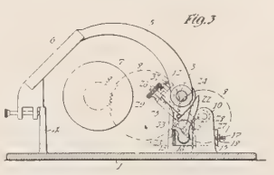
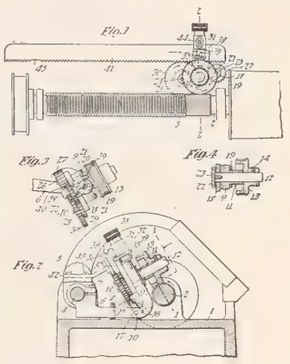




PHONOGRAPH. Herman Wolke, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,269.

This invention relates to phonographs, and has for its object the provision of means whereby the traveling carriage which carries the reproducer or recorder, may be fed at either of two desired rates of speed, so as to adapt it to operate, for example, upon records having, respectively, one hundred and two hundred threads per inch, and said means are preferably designed so that they may be readily applied to phonographs of ordinary construction, such as are now in general use throughout this and other countries.

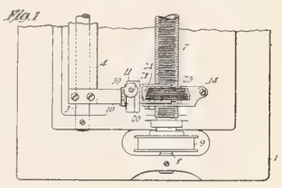
Figure 1 is a section on line 1—1 of Fig. 2, viewed in the direction indicated by the arrow; Fig. 2 is a section on line 2—2 of Fig. 1, showing the invention applied to a phonograph of well-known form; Fig. 3 is a detail view of the gears for feeding the traveling carriage, as viewed in a direction at right angles to Fig. 2, and Fig. 4 is a sectional detail of the worm gear and adjacent parts.



FEEDING MECHANISM FOR PHONOGRAPHS. Herman Wolke, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,274.

This invention relates to improvements in feed mechanisms for phonographs of the type disclosed in applications for Letters Patent, filed January 3, 1907, Serial No. 350,648 and Serial No. 350,649.

The present invention provides an arrangement by means of which variations in the diameters of the feed screws can be properly compensated and in a broad sense the invention consists in effecting this compensation by varying the diameter of the rotating nut. Preferably, this is effected by providing the nut with a convex threaded surface, the maximum and minimum diameters of which shall be sufficient to include the extreme variations in diameter of the screw encountered in practice, whereby the position of the nut may be adjusted to permit an engagement of its threaded part at the desired diameter to secure the exact feed required. This adjustment of the threaded nut is preferably effected by varying its angle to permit the convex threaded surface thereof to engage the feed screw at the desired point, corresponding to the diameter of the nut.



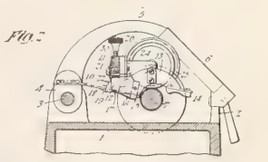


Figure 1 represents a plan view of a portion of the Home phonograph with the present improvements applied thereto, the guard which partially encircles the threaded nut being removed for the purpose of clearness; Fig. 2 a sectional view of the same with the guard in place; Fig. 3 an enlarged sectional view illustrating the feed screw and rotating nut, with the latter engaging the feed screw on the line of its maximum diameter· Fig. 4 a corresponding view showing the nut engaging the feed

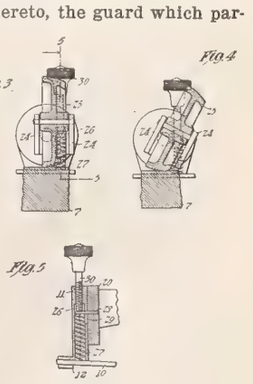
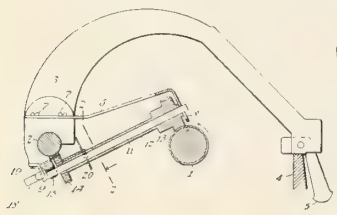


screw on the line of its minimum diameter; and Fig. 5 a section of the line 5—5 of Fig. 3.

GEARING. Herman Wolke, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 936,264.

The object of this invention is the production of improved means whereby the carriage may be advanced, either directly by the rotating feed screw, as has hitherto been the practice, or whereby, at the will of the operator, the carriage may be advanced at each revolution of the feed screw, a distance bearing any desired ratio to the pitch of the said feed screw. This is desirable in order that a single instrument may be used for the recording or reproduction of records, the record grooves whereof have different pitches. The ordinary phonographs now in use are adapted for the reproduction of the ordinary standard sound record, the grooves whereof have a pitch of substantially one one-hundredth of an inch. As records can now be produced with a very much smaller pitch, preferably one two-hundredths of an inch, and since it is impracticable to manufacture feed screws with so small a pitch, it is an object of the invention to adapt the phonograph for the recording or reproduction of records of either of the sorts above mentioned, by means of a simple adjustment and with as little change as possible from the present form of this instrument.



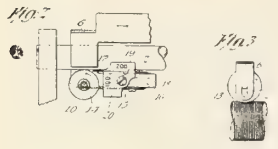


Figure 1 is a cross-sectional view of one form of device constructed in accordance with the invention; Fig. 2 is a cross-sectional view, taken at right angles to Fig. 1 and on the line 2—2 in the said figure, and looking in the direction of the arrow, and Fig. 3 is a detail showing the manner in which the worm gear is journaled in the carriage.

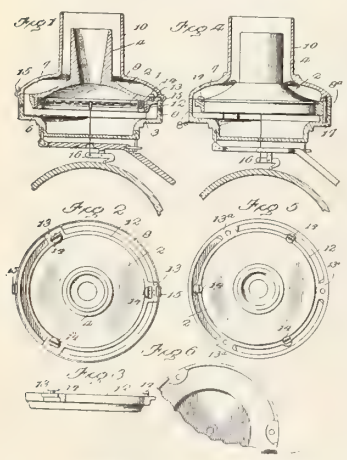
ATTACHMENT FOR PHONOGRAPHS. John Georigi, Philadelphia, Pa. Patent No. 936,115.

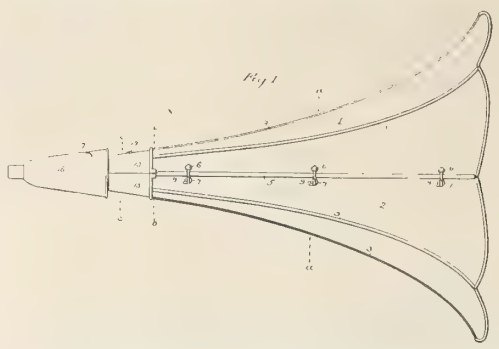
The primary object of this invention is to provide a simple device for increasing the volume of sound waves in reproducers of talking machines. Ordinarily the sound waves are collected only from above the diaphragm from which the stylus is suspended, sound from beneath the diaphragm being lost. By means of this invention the ordinary diaphragm and the sound wave collector are enclosed in a casing having a chamber for collecting the sound waves from beneath the diaphragm and transferring them independently of the sound waves of the upper collector to a common point where the conjoint sound waves of greatly increased volume may be transmitted through a tube or horn.



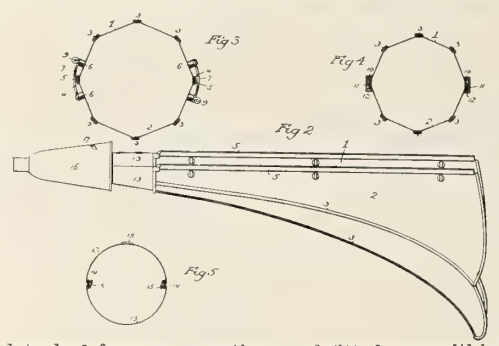
In the accompanying drawings Figure 1 is a vertical longitudinal sectional view. Fig. 2 is a plan view with the top and the ordinary reproducer removed. Fig. 3 is a detail. Fig. 4 shows a slight modification. Fig. 5 is a plan view of the form shown in Fig. 4 with top removed. Fig.6 is an inverted fragmentary view of the top shown in Fig. 4.

SECTIONAL HORN FOR TALKING MACHINES. Ellsworth A. Hawthorne, Philadelphia, Pa., assignor to Hawthorne & Sheble Mfg. Co., same place. Patent No. 935,980.

One object of the invention is to so construct such a horn that its parts can be easily fitted together and taken apart, and, when so fitted together, will be rigidly held in their proper relation one to another; a further object being to so construct the sectional members of the horn that when they are fitted together, the horn will present, both interiorly and exteriorly, a symmetrical appearance.



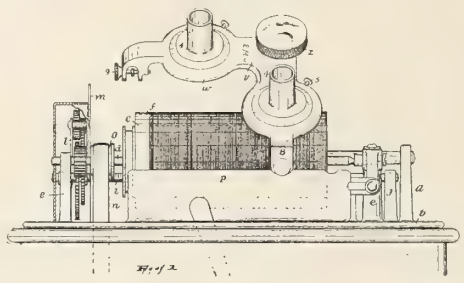
In the accompanying drawings—Figure 1 is a side elevation of my improved sectional horn showing the members of the same fitted together for use, but illustrating the mouthpiece detached from the bell portion of the horn; Fig. 2 is a similar view illustrating the sections of the horn



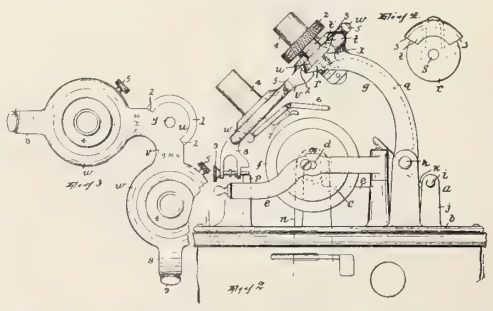
detached from one another, and fitted one within the other; Fig. 3 is a transverse section on the line a—a, Fig. 1; Fig. 4 is a transverse section on the line b—b, Fig. 1, but on an enlarged scale, and Fig. 5 is a transverse section on the line c—c, Fig. 1, likewise on an enlarged scale.

PHONOGRAPH MACHINE. Thomas J. Blanch, Highland Falls, N. Y. Patent No. 935,773.

This invention relates to phonograph machines, and particularly to that class of such machines in which are used cylindrical records, and it has for its object to provide a practical and novel construction of carriage or slide whereby either of two reproducers or "speakers" arranged therein may be quickly and readily thrown into, and the other out of, working position relatively to the record.



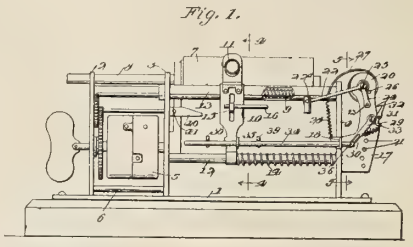
It being predicated that there are now in use two general kinds of records, to wit, one having one number of threads to the inch, say 100, and the other having another number of threads to the inch, say 200, and that these two kinds



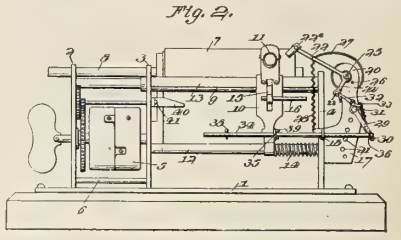
of records require distinct kinds of styluses, the advantages gained in associating the two different speakers or reproducers in a single structure so that the change from the one to the other may be accomplished quickly and conveniently will be apparent.

In the accompanying drawings, in which the invention is fully illustrated, Figure 1 is a front view of a phonograph machine constructed in accordance with this invention; Fig. 2 is a side view thereof; Fig. 3 shows the pivoted reproducer support in plan; and Fig. 4 is a plan of the end of the arm of the carriage or slide.

ATTACHMENT FOR PHONOGRAPHS, ETC. George F. Perrenot, Yoakum, Tex., assignor of one-fourth to Robt. William Easterling, same place. Patent No. 937,641.



One of the objects of this invention is the construction of a repeating device for phonographs which may be applied to cylindrical machines, which is capable of being automatically



operated by the reproducer moving arm of a phonograph, which provides means for returning a reproducer to its starting position and to automatically hold the reproducer out of engagement with its driving shaft.

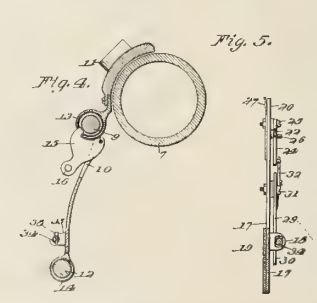


Figure 1 is a side elevation showing the improved mechanism in its normal position; Fig. 2 is a side elevation showing the improved mechanism in a raised position; Fig. 3 is a plan view; Fig. 4 is a transverse section taken on line 4—4 of Fig. 1; and Fig. 5 is a detail vertical sectional view taken on line 5—5 of Fig. 1.

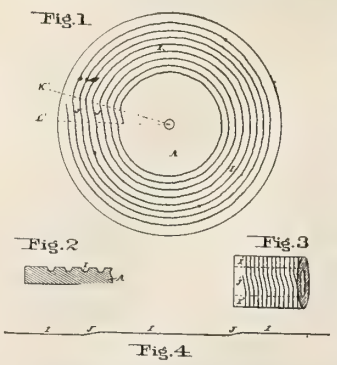
RECORD FOR SOUND-REPRODUCING MACHINES. Rudolph M. Hunter, Philadelphia, Pa. Patent No. 937,680.

The object of this invention is to provide a construction of sound record tablet which, when operating in conjunction with the sound box and stylus, will, during the greater part of the time, cause a reproduction of the sounds without any feeding or propelling action upon the sound box and stylus or upon the record relatively to the sound box so that for about 95 per cent. of the time required to reproduce any piece the stylus simply responds to the reproducing of sound and is not influenced by lateral feeding across the record tablet.



The result of the above described method of reproducing sound is that less scratchy tones result and the reproduction is more accurate, because there are no continuous lateral strains caused by the transverse feeding or propelling of the stylus by the groove, and hence the lateral vibrations of the stylus are equally free in both directions.

Figure 1 is a plan view of a disc record embodying the invention; Fig. 2 is a cross-section of a portion of the same but on a larger scale; Fig. 3 is an elevation of a portion of a cylindrical record tablet embodying the invention; and Fig. 4 is a diagram illustrating the arrangement of the grooves when stretched out.

PHONOGRAPHIC RECORDING AND REPRODUCING MACHINE. Thomas A. Edison, Llewellyn Park, Orange, N. J. Patent No. 939,992.

In an application for Letters Patent Serial No. 362,597 filed on even date herewith, there are described and claimed certain improvements in phonographic recording and reproducing mechanism, in which use is made of a vibrating piston which connects with the stylus lever and wherein an independent tension device is employed for maintaining the stylus in engagement with the recording or record surface. These are pointed out in said application, the advantages of a vibrating piston as compared to a diaphragm, and two specific forms of devices embodying the new improvements are illustrated, one form, specifically claimed therein, employing a compensating weight so that the fulcrum of the stylus lever will be always maintained in proper relation to the record surface, notwithstanding mechanical variations or eccentricities therein, and the other employing no compensating weight, as may be done if the surface is fairly true. In the present application the device embodying the said improvements in which the compensating weight is dispensed with is claimed and described.

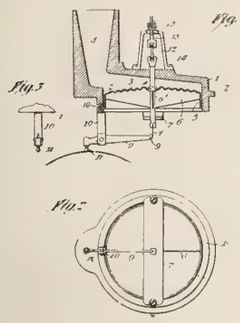


Figure 1 is a vertical sectional view of a reproducing mechanism embodying the improvements; Fig. 2, a bottom view of the same, and Fig. 3, a detail view of the hinge connection between the stylus lever and the casing.

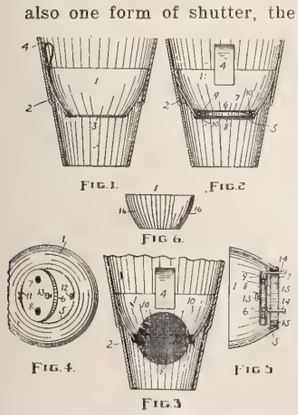
SOUND-REGULATOR. William W. Young, Springfield, Mass. Patent No. 940,109.

The objects of the invention are to produce a device, especially intended for use in horns of talking machines and in the capacity of mutes in wind instruments, whereby the sound waves are more or less modified in their passage through a tubular member containing said device so that a softened and mellowed tone is given off.

Figure 1 is a sectional view of the neck of a horn and of one form of the improved holder in such neck; Fig. 2, a similar view showing also one form of shutter, the same being in its closed position; Fig. 3, a view like the preceding one except that the shutter is shown open; Fig. 4, an outside view of a holder and shutter showing the diaphragmal or movable shutter member hinged to the supporting ring or collar instead of being pivotally mounted therein as in Figs. 2 and 3; Fig. 5, a sectional view of a holder and shutter showing the movable shutter member slidingly mounted relative to the collar, and Fig. 6 a side elevation on a reduced scale and partly in section of a slightly modified form of holder.



APPARATUS FOR MAKING DUPLICATE PHONOGRAPH RECORDS. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 940,631.

The present invention relates to an improved apparatus of the general type disclosed in said application, but wherein provision is made whereby the material of which the record is to be made may be introduced within the mold in a solid condition, preferably in the form of a powder or small granules. Such a mode of operation is especially advantageous in connection with the molding of materials having a high melting point, or which are stringy or extremely viscid when molten so as to be difficult of manipulation in that condition, such as asphalt, shellac compositions, copal gum or compounds employing these ingredients. Even for the molding of records from ordinary wax-like compositions of the type disclosed in my Patent No. 782,375, dated February 14, 1905, it may in some instances be desirable to effect the molding from the solid state, owing to the ease with which a definite quantity of such materials can be measured and the inconvenience of working with the material in a molten state.

In carrying the present invention into effect means are provided for rotating a hot mold at high speed and for introducing a fusible material therein in the solid state, preferably in the form of powder or small granules, whereby the fusible material will be uniformly distributed over the bore of the mold by the centrifugal force developed and will be melted by the heat of the mold, so as to become fluid and take a very perfect impression from the record surface, at the same time displacing any air or gas bubbles and forcing the same inwardly; after which the mold will be cooled, so as to chill or set the material while the mold is being continuously rotated.

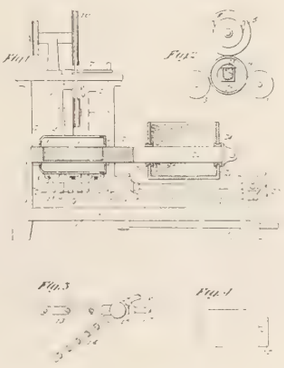


Figure 1 is a longitudinal sectional view of an apparatus constructed in accordance with this invention; Fig. 2, a sectional view on the line 2—2 of Fig. 1; Fig. 3, a plan view, showing the heating and cooling mechanism, and Fig. 4, an elevation of the complete mold.

PHONOGRAPHIC NEEDLE. Andrew J. Smith, Chicago, Ill., assignor of one-half to Frederick R. Baker, same place. Patent No. 940,486.

In the making of phonograph needles it is highly desirable that the substance from which the needle is formed should be of sufficient strength and toughness to maintain a fine point adapted to register the most minute variations in the record line, and at the same time have a certain smoothness and pliability which will prevent the needle from scratching the record.

The needle of the present invention possesses qualities which render it highly satisfactory for phonographic purposes. It is of such tough fiber and consistency as to maintain a point for a relatively long period and at the same time will not scratch or wear away the fiber variations in a record line, nor will the point burn off when subjected to the heat of friction. Moreover, the present needle secures a tone which is ample in volume and of the finest quality, being free from all scratching or metallic noises and reproducing the finest variations of tone and quality in the record.

In the drawings illustrating the invention, Figures 1 and 2 are views showing cactus spines from which the needles are made; and Figs. 3 and 4, views showing the completed needles.

SOUND-BOX FOR TALKING MACHINES. Morris Keen, Philadelphia, Pa. Patent No. 940,161.

This invention has reference to sound boxes for talking machines and the object is to provide a construction of sound box in which the diaphragm is yieldingly supported in the box so that it has capacity for vibration adjacent to its perimeter as well as at its center and to otherwise construct the sound box as a whole that it will be inexpensive to construct, sensitive in action and easily and quickly repaired.

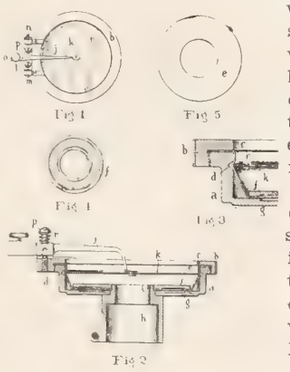

Figure 1 is an elevation of a sound-box embodying this invention; Fig. 2 is a cross sectional view of the same; Fig. 3 is an enlarged cross section of a portion of the same; Fig. 4 is a plan view of the clamping annular plate; and Fig. 5 is a plan view of the yielding lining before being applied to the box.

FROM THE CUSTOMER'S VIEW POINT.

Desirable Qualities in a Talking Machine Salesman as the Man in Front of the Counter Sees Them—Faculty of Judging Musical Taste, Knowledge of Records and Good Judgement the Three Prime Factors.

Zanesville, O., Dec. 2, 1909.

Editor of The Talking Machine World:

Dear Sir—I have noticed in The Talking Machine World various views and suggestions as to the most desirable and successful qualities in a talking machine salesman. They are evidently from the viewpoint of the dealer. Let me offer some views from a customer's side. In my limited experience as an amateur I have found the qualities most helpful to me as a buyer of disc records and the most profitable to the dealer-to-be:

First—Faculty of sizing up the preference and musical taste of the customer.

Second—Ready knowledge of the records.

Third—Judgment in playing them.

The first essential is to know as nearly as possible what kind of selections the buyer prefers and what his taste is in music; whether he wants vocal or instrumental selections; if the former, whether operatic, sacred or vaudeville; if the latter, whether popular, catchy pieces or music of a higher order, classical or semi-classical. A fair idea of this can be got by inquiry or by playing a few records.

Familiarity with records is not less important. I have found fine records and unsatisfactory records in the discs of each of the three well-known companies. In many instances the same selection is put forth by each, and in many I have discarded as unsatisfactory a record of one for a better record of another. In some cases two or more records of the same selection are issued by the same company. Now the business of a salesman is to know the best and let the customer know it.

The quality of a record is often shown and its sale determined by the way it is played. Some selections call for a soft, sweet rendering; others are most effectively played with force and spirit. Of course, these qualities are observed in recording the selections; but they can be seconded or minimized in playing the record. Again, some records may be improved or minimized to taste by playing them in faster or slower tempo than that taken by the band or singer in making the record.

These changes, to a very material extent, are within the control of the player. In all horn machines the volume or loudness of sound can be regulated by the choice of needles—soft, medium tone or loud—and in hornless machines it can be further regulated by shutting or opening, partly or wholly, the doors from which the sound issues. Then, again, I find a difference among needles of the same class. Some are evidently imperfect or defective, with the result of giving a husky or otherwise unsatisfactory tone, while a clearer, better tone is secured by using another needle from the same lot.

Within moderate limits I can change the tempo and pitch by the indicator on my machine, and often do so with satisfaction. I presume the same is true of all disc machines.

To illustrate the importance of proper playing to both seller and buyer, I cite the fact that in my earliest experience as a buyer, when the salesman did the playing and I the listening, I rejected a number of records for what I afterward found to be unintelligent playing, learned to remedy it myself and then took the records.

The above views may seem commonplace; I have not found their practice so.

If this communication is not already too long or uninteresting, let me confess that nine months ago The World might have considered me, as well as some others I know, fully eligible to membership in what it styles the "Royal Association of Jackasses" in its criticism of a southern editor for characterizing the talking machine as a common nuisance. My idea of the "talker," then, was derived from the barking machines at the doors of cheap shows and the hideous screeching of trashy records heard when passing some talking machine place.

Later on, hearing by chance a good record well played in New York, I was led to investigate and then to invest in a Victrola and many records. In what before I considered a nuisance I found a boon and am now a confirmed

PHONOPHIL.

3 IN ONE PROTECTS THE DEALERS.

Announcement has been made previously in this publication of the change in price of 3 in One Oil, which goes into effect January 1st, 1910. In this connection it might be observed that the 3 in One Oil Co. protect the interests of the retail dealer, as they always have. By directing the attention of the trade to this change in price sufficiently in advance, all dealers have the opportunity of stocking up in advance of the raise in price. In other words, you can order now a supply of 3 in One to carry you for six months of 1910, or longer, at the old prices. We learn that many dealers in all parts of the United States are doing this, thereby enabling them to make an extra large profit on 1910 sales.

The 3 in One Oil Co. are further co-operating with the retail dealer by increasing their big, general advertising very much. The most strenuous advertising campaign they have ever carried out is being inaugurated for this coming year, so that the demand will be much greater than ever before. This big advertising campaign will stop price-cutting so that all retailers can get the regular, established, advertised retail prices—small size, 10 cents; large size, 25 cents—thereby enabling them to make the very best margin of profit instead of throwing it away. Unfair competition will be eliminated and the dealer who pushes 3 in One can expect to reap the full benefits of his efforts.

A larger size package of 3 in One—8 oz. for 50 cents—will be placed on the market January 1st. This will have a ready sale in households, where 3 in One is used continuously, many factories and all business offices.

NEW IDEAS THE LIFE OF BUSINESS.

The Man Who Can't Keep in Touch with Modern Developments Should Step to the Rear and Give the Other Fellow a Chance.

In the talking machine industry, and, in fact, every progressive business to-day, the man who "never did business like that" is gradually weeding himself from the mercantile field. When confronted with the problems of the present and having suggested to him certain courses to pursue, he puts up the plea that he has never done business that way, has heretofore been successful, and sees no reason why he should modify, change, or add to that which has placed him where he is. He keeps on for a while in the way he is going, and although he insists that he is doing good business, he knows that something is wrong, somewhere, but he still sees no reason for adopting new-fangled ideas.

If we can't make up our minds to do the things of to-day as the necessities of the day demand and shape our methods according to the particular requirements of the present, we'll sooner or later find that he who has a way of his own of doing things, and persists in doing things that way under any conditions, will get left far behind in the race for business. A man goes to bed with a clear conscience that he has fixed his business properly for the problems he has contended with during the day, but he wakes up to his business the next morning with some new series or sets of trouble confronting him that demand other treatments. Ignoring or passing over won't rid his business of the annoyances, and because he didn't have them to contend with 10 or 20 years ago, he fools himself expensively if he attempts to let them go unnoticed and unconquered. It doesn't make any difference how we did business some other day, the problems of to-day are the ones that demand our attention to-day, and if we don't know how to handle them it is up to us to find out immediately.

NUGGETS FROM "THE WORLD" MINE.

Method goes far to prevent trouble in business; for it makes the task easy, hinders confusion, saves abundance of time, and instructs those that have business depending, what to do, and what to hope.

It is profitable wisdom to know when we have done enough; much time and pains are spared in not flattering ourselves against probabilities.

It is not enough that a thing be right, if it be not fit to be done. If not prudent, though just, it is not advisable. He that loses by getting, had better lose than get.

A wise man makes what he learns his own; the other shows he is but a copy, or a collection.

HANDLING THE CUSTOMER'S KICK.

Failure to Handle the Complaint with Wisdom and Dispatch Shows a Lack of Confidence—An Apt Illustration Worth Studying.

Somehow the tendency of the selling unit to let the customer kick and not handle the kick with common sense, plus dispatch at the time—settling it, if possible, instead of passing on the kick to the office—appears to show a lack of confidence.

Every firm to survive must be built on a foundation of serving a satisfied trade. Remember this when someone says we are fighting our customers.

Surely, each salesman representing a business house of modern ideas and methods should be able to know enough about the goods, method of manufacturing, system of inspection and shipping, records, etc., to properly explain or adjust the complaint in such a businesslike way as will make a real friend of the kicker for himself and the firm.

To pass on the kick to the office reflects on the house and the salesman from some angle. To be right on the job with a

> "I am glad you have brought this to my attention. Let me see your order and our invoice, also the goods; for, if things are as you say, we are wrong. You can well understand that we have the human element to contend with in our business. I shall, of course, see that my error is adjusted to your satisfaction, as I realize you are most fair and reasonable," etc.

The "our" feeling, when thinking of the house on the part of the salesman, is so necessary. So many, for the moment, fight the house for the customer. It hurts even to create the impression if you don't put it in words.

It's all in the confidence you have in yourself and what you know about business methods, your house and what you sell. Your, or, in fact, any salesman's experience gives a fund of knowledge that suggests what to do. It's like breaking a pony to the saddle to adjust a "kick." It's a serious proposition to the pony. He has a "kick" coming, and you know it.

I shall never forget the first time I broke a little Pinto by the name of "Black Jack," says Geo. B. Eberhard. He was a four-old who grew up man and fancy free on a lonesome-looking foothill range.

It all happened suddenly; the event was rather forced on me, like the usual "kick," and while the boys stretched, blindfolded and saddled the pony he seemed to be some put out. I finally recovered enough to grasp the reins and get astride.

Between my weight on the saddle and the cinch squeezing his gizzard, the excited little cayuse was encouraged to a method of action that made my eyes turn in and my system feel as though I were strapped to a "milk shake" machine busy on an old maid's order.

All at once it dawned on me I could stick, and with spurs and quirt I began to dig into the issue. It was a busy morning, but when I got back to the corral the pony and I had hit a friendly basis of compromise.

I realized, also, that never again would I lack confidence with a horse who had a kick coming, though I didn't go out after them.

Black Jack afterward was my best friend on many a hard, tiresome ride.

You must dig into kicks and trouble. It's all easy once you ride a few down.

Make up your mind that your goods, the plan, the method, the company, the individuals, are right, then hit the saddle and stick to the game. Don't let the other fellow buck you off or tire you out with an unreasonable argument or demand. Hit hard and clean for a fair adjustment. Where fair to do so, compromise, and remember you represent the house!

POST CARDS FOR THE HOLIDAYS.

Some Very Artistic Creations Being Put Forth by Manufacturers and Dealers for Christmas and Easter Tides.

One would think that the limit had been reached in the matter of designs for Christmas and Easter post cards, but nevertheless some very novel ideas are again in evidence for the Christmas and spring holiday trade. There is not only a larger variety this season, but more skill and originality are displayed in the conception of these very welcome and now almost necessary seasonable publications. Many of them are printed in colors and are really works of art. The development of the post card business has assumed tremendous proportions, and while we have not yet equaled England or Germany in certain lines in the matter of output, yet we are fast approaching these countries in the artistic quality of our creations. It is now recognized that the high-class cards are mostly all of great educational value, and all fair-minded people are rapidly estimating them at their true worth. Even in the cheaper grades a higher standard is evident.

THE WORLD AS A STREET CAR.

Plenty of Room Up Front, but All the Passengers Try to Stand at the Rear—A Simile with a Moral.

A crowded street car often reminds one of life. You know in the cars the crowds stay near the door. There is always plenty of room up in front, but to get there takes initiative and push, and somehow or another the average person would rather stay in the crowd than take the trouble to work his way up to the front. The often repeated cry of the conductor, "up in front," falls on unhearing ears. To stay with the crowd is much easier than to strike out for one's self, says J. A. Murphy. The crowd seems to hold one magnetized, and though those vacant seats away up there near the motorman appeal to one's sense of ease, still they are a long way off! So we postpone the troublesome working-up-to-the-front process and willingly hang onto our strap near the door with the rest of the crowd.

So it is with life. The multitude hang around the bottom of the ladder, fearing to go up a few rungs. Thousands and millions seek the $10, $15, $18 and $25 a week jobs, but few—very few, indeed—have the nerve, ability and enterprise to go after the $5,000 and $10,000 a year positions.

SLOT MACHINES OF HISTORY

Were in Existence in 100 B. C.—The Machine Used by Richard Carlile in England.

Even before the Christian era the penny-in-the-slot machine was in existence. Hero of Alexandria, who flourished about 100 B. C., has described a sacrificial vessel from which the water would flow only when money was dropped into a slot, the coin dropping on a lever which opened the valve. Richard Carlile, the famous English free-thinking bookseller, too, seems to have invented an early type of automatic machine. His shopmen were arrested so frequently that he sold his books by clockwork to prevent the buyers identifying the seller. The names of the books were inscribed on a dial and the purchaser, having turned the pointed to the one he wanted, deposited his money and the volume dropped down.

REIGN OF THE SAFETY RAZOR.

Boon to Every One but the Barber—The Gillette Sales Co.'s Enterprise—A Line Worth Looking Into By Talking Machine Dealers.

There is no doubt that the safety razor of today has won an assured position among the toilet articles of the gentleman, and about the only ones who have not welcomed the innovation are the barbers, who, to all appearances, have suffered considerably.

Before the day of the safety razor the man with the nervous hand or the tender face had to patronize the professional "shaver" or, in any event, give him the opportunity of turning his razor blade into a hack saw, under the guise of "honing."

With the advent of the safety razor, however, we may say since the advent of the Gillette razor, the plan of having removable blades, which may be used oftener than the ordinary style of blade and with perfect freedom from cuts and gashes and then sharpened at the factory, has won over even the most skeptical.

When the Gillette razor was put on the market the features mentioned won it immediate success and placed it in a position a host of competitors and imitators have not succeeded in shaking. The wonderful advertising campaigns carried on by the Gillette Sales Co. have reverted directly to the benefit of the dealer, and when the latest vest pocket edition was introduced the publicity given it resulted in a volume of sales that was surprising.

Dealers will find the Gillette razors and blades a salable, clean and profitable line, and that the proposition offered to the trade has many attractions.

Wit is fitter for diversion than business, being more grateful to fancy than judgment.

EDUCATION BY MOTION-PICTURES.

A Remarkable Development Within Recent Years—Used in Varied Domains of Effort.

Upon the white screen is shown a stalk pushing its way up from the ground; leaves developing, bolls swelling, then bursting to reveal the white substance within, and in a few moments the whole life of a cotton plant has been in review of a hall full of people who never saw one growing.

Next may come a factory wherein some industry of national importance is carried on; every process appears in exact detail. Then a film taken by Chinese photographers, imported by way of San Francisco, showing how tea is grown, harvested and prepared. A Russian or Australian film may follow. Then a mountain-climbing scene, with rope and ice-axe in use; a battle; Wright's aeroplane in fight; a camel caravan.

The whole world is not only seeing, but making motion pictures. The photograph and the vitagraph have penetrated every continent and are pleasing or instructing all manner of man from the Zulu to the Berlin doctor of philosophy. Purely on the theatrical side the industry has become so great as to require subdivision. A distinct specialty has thus grown up in the making of "chasers," as those series are called, wherein policemen, nurse girls, grocers and other characters go through obstacle races at great speed.

Most recent and most marvelous are some of the scientific uses of motion pictures. Thus, the Merchants' Association of New York, convinced of the ravages the house-fly is doing, has arranged for educational motion films showing the enormous loss the nation incurs by it. More wonderful still, the most delicate and dangerous surgical operations are studied by camera and film. The operation itself, if serious, can have no spectators, or few at the most. The surgeons rehearse with a dummy to get "in the picture"; the operation is performed before the camera, quickly, deftly; later the film may be explained to a thousand students. The pictures can be run slowly so that the exact manner of using the implements may be seen. They can be repeated a thousand times and made in duplicate for many schools.

The formation of a voluntary commission for censoring motion pictures in the interest of public morality has received much attention. Quite as important as this praiseworthy effort of the manufacturers to prune entertainment of any objectionable features is the daily discovery of some new educational or business use to which pictures can be put, and educators the country over are actively aiding in suggesting new films. Trade, advertisements, surgery, commerce, the training of soldiers—what work will not the motion pictures yet be set to do?

COLORED PAPER FOR STAMPS.

Postal Authorities Aim to Make Them Easier to Distinguish.

(Special to The Talking Machine World.)
Washington, Dec. 4, 1909.

The Post Office Department is considering the advisability of printing some of the postage stamps on colored paper because of the confusion often experienced by the public and the postal service on account of the printing of the stamps of different denominations in light ink.

The difficulty heretofore experienced has been due to the lack of sufficiently strong contrasting colors for so many denominations. This has made it necessary to use inks of different shades of the same colors. The result is that the green stamp is confused with the 8-cent olive, the 3-cent purple with the 50-cent lavender, the 5-cent dark blue with the 15-cent light blue and the 6-cent orange with the 10-cent yellow. It is believed that the use of colored paper will make the stamps readily distinguishable under artificial as well as natural light.

In pursuance of this scheme the 10-cent stamp will be printed experimentally in a rich brown ink on yellow paper. The effect is regarded as very pleasing, and the Postmaster-General considered this in selecting the combination, although his principal object was to make it easy to determine the denomination of the stamp at a glance.

The new 10-cent stamp will be placed on sale as soon as a supply of yellow paper bearing the usual water-mark can be manufactured and the stamps printed. If the experiment proves successful it will be extended to other stamps of the higher denominations.

IT PAYS TO KEEP IN THE PUBLIC EYE.

Some Observations on Modern Methods of Merchandising Which Will Prove Interesting to World Readers.

Not long ago the head of a large department store—an establishment of national reputation—was asked what he believed to be the proper distinction between old-time "store keeping" and "modern merchandising."

"Well," said he, "storekeeping looked only for a chance to make a sale and pocket the profit. Modern merchandising recognizes the existence of such a thing as human nature and adapts itself to it. Its function is mainly one of service and it aims to get the continued trade of its patrons. Consequently, modern merchandising reaps dollars of profit where storekeeping reaped cents."

There is, of course, a certain degree of exaggeration in a statement of this kind. Nevertheless it affords a great deal of food for reflection.

Modern merchandising makes a study of human nature. Let us therefore see what element it is in human nature which the progressive merchant should understand and avail himself of.

As nearly as we can figure it out, that element is the inborn demand and love of all mankind for variety. The man who first announced that "variety is the spice of life" struck the keynote of the situation.

If you would keep your store constantly "in the public eye," you must feed the public on a diet of variety.

One stunt won't last forever. Neither will a series of stunts all along the same line do the work.

There must be an element of "differentness" all the time to make people wonder what you are going to do next.

This does not necessarily mean a whole lot of expensive advertising. Neither does it mean a large outlay of money in other ways. A little brain work is more essential than anything else. Brains without money can accomplish much more than the opposite condition of affairs.

Your reputation, in so far as it is independent of your personality, depends upon your store.

The problem of the merchant is therefore to make the outside of his store so attractive that people will want to see the inside, and the inside so attractive that it will confirm the good impression made by the outside.

When a man goes into a store he usually expects to make an inquiry or buy something. Hence, the chief aim in the interior arrangement should be to present the stock attractively and have it clean and well arranged, so as to make it as easy and convenient as possible for the transaction of business.

POST CARDS HISTORY MAKERS.

The Knowledge of Foreign Countries and Historic Places Disseminated by Means of Postcards—Proving to be Liberal Educators—Worth Writing Manager Frazer.

It is now widely conceded that the post card has been a tremendous value in giving the people of moderate means a knowledge of historical spots in foreign countries. On the other hand, there is not a large city in the United States, or, for that matter, in any country where there are not buildings of historic interest, views of local, national or even international interest, or perhaps it may be just a view or views that are shown to the visitor only because of local pride.

While the foregoing is true in all large cities wherever located, it is just as true, only in a less conspicuous way, in every town throughout these United States, either in the North, South, East or West. It goes without saying that there are more historic views in the East than in the West; it is equally true that there are more scenes of local and national interest in the West than in the East, nevertheless our country is honeycombed with scenes of which we are all very proud.

More than twenty-five years ago it dawned upon the people of Germany, Italy and France that they, too, had a very large number of scenes, buildings and historic spots, and that it would be a very wise thing to make these known to the world in an effective but necessarily an economical way.

After repeated efforts and experiments it developed that a card could be printed showing the outlines of the building that they wished to describe, but not giving a very good view of the scenes in which they wished to interest the world.

From this feeble effort but earnest desire to illustrate these different subjects in an original way has grown the modern post card.

During the year 1908 the sale of these modern local post cards in the United States was larger than ever before, and the orders given for delivery during 1909 will make the actual sale for this year of record breaking proportions. This progress has been made in spite of the financial upheaval with which the country has been afflicted during the last two years.

Many manufacturers have advertised themselves as publishers of these post cards, some of them have spent large sums of money in their efforts to bring their cards to the attention of the retail dealers, but usually orders have not been forthcoming without a large amount of correspondence or the visit of a traveling salesman.

Some time ago in this department we called attention to the fact that Wm. G. Frazer, manager of the post card department of the American News Co., New York City, had devised a plan that will cut off all the unnecessary correspondence and also the visits of salesmen, especially to the dealer who wishes only to supply himself with cards which will please his customers and yet offer them a reasonable variety of good quality at a fair price. If you will write Mr. Frazer you will receive by return mail all the necessary information condensed, so that you will be able to place your order at once without asking a single question.

This company are long and favorably known for keeping their agreements, and the dealer placing his order with them will take no risk as to quality, price or delivery on time agreed.

In addition to these matters in connection with your orders they will guara your photographs with zealous care and other cards will not be published from them, no matter what inducements may be offered this company.

Now is the time to arrange for a stock of cards for the spring and summer trade, so that there will be no chance of disappointment in deliveries.

The Gillette is one of the best selling Specialties you can have in your store. It is especially good at Holiday time. Now is the time to stock for your Holiday trade. The Gillette display will create interest—sales—profits—just as soon as you get it on your counter—but not a minute sooner.

Every Christmas buyer who comes into your store is a possible Gillette purchaser. Women are looking for just such articles as gifts for their men folks. Men want the Gillette for themselves, and to give it to their friends.

Few other displays will give you as many sales for the space they take as your showing of Gillette Safety Razors.

Gillette Safety Razor, standard set, $5.00.

Pocket Edition, cases in gold, silver, or gun metal, with razor and blade box to match, retail complete from $5.00 to $7.50.

Gillette Combination Sets—from simple ones containing razor, soap and brush at $6.50 up to elaborate sets with everything the most fastidious shaver could desire at $50.00. Especially sought for gift purposes.

QUALITY ALWAYS COUNTS.

No One Word in the Vocabulary of Merchandise More Pregnant with Significance Than This Word "Quality"—It Applies to Every Form of Activity in the Mercantile Field.

One of the hardest things in selling is to convince a customer that first cost is not last cost; to make him understand that while the price of some goods may be much lower in the beginning, they are invariably dearer in the end; to show him that almost always an article is worth just about what we price it; in short, to impress him with the meaning of "quality."

No word in the vocabulary of merchandizing is more pregnant with significance than that one word "quality." You may apply it to goods, to service, to ability, to salesmanship; this one truth is universally the same—no extravagant assertion of present advantage, no false logic of economy of representation, can long endure against downright merit.

Who are the greatest men in the world to-day? They are the men who have recognized the value of attaining the highest standard of efficiency, whether it be in the manufacture of a commodity or the rendering of a special service. They may call themselves bankers, lawyers, salesmen, engineers or common laborers. As a matter of fact, they are selling for themselves or someone else, and the best salesman, or saleswoman, receives the highest price, whether it is for service rendered, or for merchandise. They have passed beyond the dividing line of quality that separates the great from the mediocre. They know that the truly great salesman sells his commodity at his own price, and that the "weaker" salesman sells his at the customer's price.

True it is that the great are few, the mediocre many, but the few who have scored highest are those who built on "quality."

LATEST CUSTOMS RULINGS.

Cinematograph Films Are Held to be "Photographs" Under the Tariff.

Cinematograph films have been held by the United States Circuit Court to be "photographs" within the meaning of that word as used in the Dingley tariff. It had been the contention of the Government that the films should be classified for purposes of duty as "manufactures, of which collodion or any compound of pyroxylin is the component material of chief value."

When the issue was before the Board of United States General Appraisers that tribunal held that the films are not "manufactures," as claimed by the Treasury Department. Under the interpretation made by the Government, the duty was at the rate of 65 cents per pound and 25 per cent. ad valorem. Sussfield, Lorsch & Co. and J. V. Berst, the importers, regarded the Treasury's decision as practically prohibitive of importations, and, therefore, took appeals to the Board of Appraisers to review the return of the Collector.

Judge Martin, in his decision for the court, upholds the decision made by the board, which held that the merchandise is either "photographs" or "photographic films" specially provided for in the revenue law. The court remarks that much of the merchandise now imported as phonographs differs widely from goods commonly known as photographs when the act was passed in 1897. The judge says it makes no difference whether the photographs are entered in long strips or cut apart. Under the court's ruling the duty is only 25 per cent.

BUSINESS DEVELOPERS.

Inquiries Are the Seed from Which Business Sprouts and Grows.

It is very necessary that all inquiries should be recorded and followed up at regular intervals and thus receive from them every bit of business possible. The man who does not do that is not the man for the job.

To produce orders one must have the best of stationery, and if you do not send out personal typewritten letters you should take care that your imitation typewritten letters are perfect for the best are none too good.

Successful letter writing is like successful personal salesmanship. The plucky letter writer goes out after the business and gets it in a percentage of cases large enough to yield a profit.

If the letter is designed to sell goods, it should begin by showing its receiver why he needs the goods. Not how good they are or how cheap, or how far ahead of their rival, but stress must be laid on his needs for them or the prospective customer will never take the time to read all the other information.

A long letter to a busy man is an imposition unless it treats of a subject in which he is deeply interested.

You can't get away from the successful salesman and you can't get away from the successful letter writer, and you don't want to, if you are up to date, for getting away may mean loss of dollars to you.

Now, as to your incoming correspondence, I will outline two systems.

Have a special ruled loose leaf page, giving space for name, street, town, state, received, answered, key, letters number 1, number 2, number 3 and remarks. With this form when a letter is received enter name, date received, answered, etc. Later, when you are sending out your second and third letters, enter record in proper space. With this system right under your thumb you can give your house and customer first-class service.

Another system that perhaps would appeal to the small dealer is the following: Get two long envelope boxes and a set of alphabetical index cards and monthly and daily guides.

When you receive letters you will have the man's business card in the corner of the envelopes. With a hand dater put on date received and date answered and any other data you may care to record, including amount received and date of goods sent. Having answered the letter, return it to the envelope with a copy of the answer. All correspondence received from one party should be put into his envelope.

After sending out your first letter file your envelope containing all data back of the date you will mail out your second letter, and later, after you have sent out your second letter, place it back of date for your third letter. For instance, you receive a number of letters and answer same November 1. Ten days from then you want to send your second letter, so you put your envelopes back of November 11. In that way you can tell at a glance how many letters you have to answer each day. When you have sent out your full set of letters or received an order from one of your letters, take your envelope from the box and put it in the box with the alphabetical guides back of the proper letter for future reference.—Louis L. Jerome, Copyright 1909, *Modern Methods.*

PIANOS AS A SIDE LINE.

Should Form an Excellent Accessory to the Business of the Talking Machine Dealer for They Appeal to Those Customers Who Appreciate Music—Coin Operated Electric Pianos Are Steady Income Winners.

Many talking machine dealers have realized the advisability of installing pianos as a side line, and the success that has attended such a move has been most pleasing. Pianos, as musical instruments, naturally appeal to those people who are regular purchasers of talking machines and records, for such people have an appreciation of music, and generally have a desire to get away from the machine-made product occasionally and make their own music by means of various instruments. Several lines of pianos have been exploited in the columns of The Talking Machine World, and dealers have shown marked interest in the possibilities of handling such a line.

Coin-operated electric player-pianos are a line that brings profit to the dealer two ways. He can sell them outright to amusement resorts, cafes, etc., at a good figure, and incidentally create a customer for additional music rolls, or make still more money by installing the pianos in various public places on a commission. The gross earnings of these instruments in a fairly good location make a surprising total, and the cost of the piano is soon cleared, the further receipts being gilt-edged profit.

ENSURE THE CORRECT ADDRESS.

Two precautions that will aid materially in the elimination of errors and disputes are that the salespeople invariably repeat to the customer the address taken for delivery of merchandise and also be particular to mention the amount of money received.

He that judges not well of the importance of his affairs, though he may be always busy, must make but a small progress.

MAKER TO DEALER

NATIONAL COLORTYPE CO. Department 9 **CINCINNATI, OHIO**

HOW A TALKING MACHINE DEALER'S BUSINESS WAS HELPED

A Dealer Who Is Noted for His Keen Business Insight and Progressiveness Tells The World How He Took on Side Lines and Made Them Prove a Most Valuable and Profitable Adjunct to His Business—A Moral Here That All Who Run May Read.

A successful talking machine dealer located in a fair-sized city, only a couple of hours' ride from Albany, N. Y., while in the metropolis recently, was asked how it was that even during the dull times his business continued to grow until an additional store was needed to properly handle the trade, while he kept adding to the several lines of goods which he handled. In answer to the queries the dealer said:

"When I started in business about five years ago I handled talking machines exclusively and carried complete lines of both disc and cylinder machines and records and quickly built up a good trade in those lines. My business, primarily, was that of a talking machine dealer, and I set out to learn all there was to learn about handling those goods.

"Though I was favored by fortune I began to wonder how I could utilize the time of my salesmen during lulls and how to keep waiting customers interested when there was a rush on, for when a customer left the store unsatisfied it meant business for my competitor. Then, too, there was a considerable space in the store that was not taken up by machines or record racks and for which I was paying good money in the form of rent.

"A little over two years ago, after giving the matter considerable thought, I came to the conclusion that the real opportunity lay in the installation of well-selected side lines, and I forthwith began to study the needs of my immediate neighborhood. My first venture in the new field was to put in a small but well-balanced line of stationery, including two well-known makes of fountain-pens and some promising novelties.

"I had hardly arranged the new stock before it started to sell, the first customer being a fussy old lady, who while waiting to select some records when the salesman was disengaged was attracted by an odd style of paper-weight, and when a salesman approached immediately purchased it, together with a rather expensive box of writing paper. That old lady's purchase settled any doubts I may have entertained regarding the side-line proposition, for if that particular customer had had to wait without anything to occupy her attention, she would have become disgusted and walked out. I therefore had not only saved a customer, but had beside made a profit on the side.

"It was not very long before I noticed that several of my regular customers were enthusiastic amateur photographers, and I forthwith put in a line of supplies, films, plates, developing and printing outfits, etc., and made arrangements with a large photographic supply house in a neighboring city to handle developing and printing work for me at a rate that left me a fair commission for myself. As the work was well done I rapidly gained patrons and it proved a good paying feature, with practically no effort on my part. Naturally, it was only a step to the handling of a large line of cameras.

"As the vicinity of the town in which I was located was rich in historical interest and attracted numerous visitors who appeared to desire some memento of their visit to take home with them, souvenirs seemed the order of the day, and I soon found that the large assortment of specially made knickknacks and post cards would have to be replenished at frequent intervals if the demand was to be satisfied.

"My side line grew in number and my store became more and more crowded until additional space was absolutely necessary if proper attention was to be given to my talking machine trade, which was still the real basis of my business. As general trade conditions at that time were not of the best I was able to secure the store adjoining at a very moderate rental and on several years' lease and I took advantage of the opportunity to expand. The extra room permitted of my taking on a quite complete line of sporting goods—i. e., firearms, fishing tackle, baseball, football and tennis goods, etc. I had already been forced to take on an extra salesman and the expansion necessitated the hiring of two more for the side line department alone.

"Instead of handling the side lines as a necessary evil, I gave them as much attention as though I were a specialist in each of the several lines, and I have found that that attention has produced results. Meanwhile, many more people have been attracted to my store than there were when I handled only one line, and, as a result, the talking machine business has shown a remarkable increase, greater by far than the increase felt by any of my competitors who handled only that line. Fully one-third of the outfits sold recently have been purchased by those who came in originally to buy something in another line, stayed to hear a record or two tried out and were won over.

"At the present time you can find the latest thing in talking machines and records at my store, yet at the same time you will find the other lines handled up to date in every particular. I lay my success to the grasping of an opportunity, and any other dealer who is willing to work can do the same thing to-day."

SHOULD BE A LEADER.

A Merchant to be Successful Should Say to His Staff "Come Along" Instead of "Go Ahead"—Why Some Have Succeeded Where Others Failed.

Every employer—and the same is true of all who occupy executive positions—is at times inclined to blame those under his direction for what he regards as their shortcomings, yet often enough, if he were to view the situation in its right light, he might find himself responsible, at least in a degree, for the situation.

Thus, when a merchant finds himself continually complaining of slackness or laxity on the part of his assistants, it is high time for him to consider to what extent he himself is responsible for such a condition. And in like manner when he finds ever in his mind, or on his tongue, reasons or excuses for his own lack of satisfactory progress, such as unsuitable locations, increase of competition, a change in the methods of doing business, etc., he should take stock of himself and see whether—and, if so, to what extent— he is himself to blame.

As regards the employe's side of the question, it is as sure as death and taxes that only in rare exceptions will employes go far in advance of their employer.

The merchant who thinks all he need to do is to constantly urge his help forward in pursuing an injudicious course. Instead of "Go ahead!" his cry should be, "Come along!" In other words, he must be a leader, not merely a prodder. It is from him that the personnel of the store must, if need be, take its pace.

Under such conditions he will be in a position to more readily surmount the obstacles which now and then loom up so menacingly before him. He will remember that in every town or city some one merchant, at least, can do a successful business, and he will see no reason why he should not be that merchant.

Who does not know of storekeepers who have abandoned a certain field as being "no good," while other merchants, after careful investigation, have selected that very same vicinity as the starting point for a new enterprise and have built up therein a highly satisfactory trade?

To attempt to summarize the methods by which such successes have been reached would be like trying to put into a few words several

GET OUT OF THE RUT!

There are many men in special lines of trade who do not realize the many paying opportunities which are afforded them in handling lines of merchandise which blend harmoniously with that which they are selling.

Take for instance piano players.

Now there is nothing which will come into the life of the talking machine business that will compare in selling strength with piano players.

They will help the dealer to increase his profits without increasing his overhead expenses.

Now which player?

That's the question.

And it's easy to answer.

THE ANGELUS by all means.

It's the original piano player and has kept its position right to the front through all the years.

All the details incident to the Angelus agency can be easily explained and we can tell you—show you—the way to secure more business, but better still, paying business.

A word to the wise is sufficient.

volumes of history. Most of our readers, however, well know the cardinal principles which lead to success in retailing, and, when temporarily forgetting these, need only a word of reminder to get back to right methods.

The packing or wrapping department should never be allowed to work so short-handed as to be the cause of slipshod methods in the putting up of merchandise. It would be greater economy to have a competent and efficient staff in this department than to deliver merchandise damaged in wrapping, thereby losing at least part of its value. Moreover, it might mean loss of a customer.

ROLLER SKATING GAINING FAVOR.

Sport, After Slight Decline, Again Strikes the Popular Fancy—Quite the Fad All Over Europe—Foreign Capitals Well Supplied with Elaborate Rinks—German Manufacturers Combine.

Roller skating, which a year or so ago was thought to be on the decline in this country, is growing in favor again with great rapidity. The asphalting of streets and avenues in all the leading cities of the country has afforded a splendid opportunity for young men and women to indulge in this very healthful exercise, and the demand for roller skates is steadily growing. In Europe roller skating has become quite a fad; in fact, in England for the past two years it has been greatly in vogue, and is now spreading to France and even to the Orient. Indeed, in England, where the people speak of "rinking" and "rinkeries," the roller skate has made its way in several unexpected directions. The Christmas pantomimes now in course of preparation, in many cases include some special skate act, and it also has become a standard feature in the programme of variety concerts and music halls.

The amount of money invested in rinks in England is enormous, much of it being spent on the conversion of old halls and buildings into skating rinks and much more on the erection of new buildings. In Spilsby one hardware dealer became so interested in the selling of skates that he has built a rink on his own responsibility.

In Paris "rinking" has also become a leading fancy, and from there it is spreading into Germany. A syndicate of German roller skate manufacturers is being formed with the avowed purpose of fixing uniform prices and of putting a stop to the import of skates from America and England.

FILM CONCERN IN DIFFICULTIES.

A petition in bankruptcy has been filed against the Consolidated Film Co., dealers in moving pictures at No. 143 East 23d street, by these creditors: George H. Abbott, $652 for commissions as manager of a branch office at No. 202 East 23d street; L. E. Fromp & Co., $141, and Joseph L. Confal, $30. It was alleged that the company is insolvent, and July 3 transferred 800 reels of moving picture films, valued at $24,000, which was substantially all the assets, to the Film Import and Trading Company, a creditor to the extent of $9,000, for a consideration of $4,500, to prefer the latter company; that the officers of both companies are the same and the effect of the transfer of these films was to place all the assets in the hands of the Film Import and Trading Company, to the exclusion of other creditors, whose claims are $7,000. The Consolidated Film Company was incorporated in March, 1907, with capital stock $10,000 and succeeded the business of two other companies. George H. Abbott was secretary and treasurer. The company formerly had a branch in Rochester, N. Y. The company has not been active in business for several months.

WATCHES RANK HIGH AS SIDE LINE.

Popular-Priced Timepieces Sell Readily When Displayed by Talking Machine Dealers—Other Goods Which Experience Has Shown to be Profitable Offerings.

Of the various articles of small ware which talking machine dealers handle as side lines, one of the best selling and easiest to handle is the popular-priced watch. Sporting goods, hardware, cameras, safety razors, fountain pens, and post cards constitute the other mainstays for side lines, and low-priced typewriters appeal to dealers as goods for which they find it profitable to act as agents. It is doubtful, however, judging from reports from dealers of all parts of the country, whether any of the goods mentioned, in great demand though they are, and particularly suited to the needs of the talking machine dealer, are quite equal to the cheap but serviceable watches for fast selling. Some of the other lines, it should be added, have proved equally profitable, nevertheless, if not more so.

There are two or three makes of these cheap watches from which the dealer may take his choice. As a matter of record it must be stated that the Ingersoll watches are easily in the lead in point of sales. In fact, an officer of the company recently stated to The Talking Machine World that for several months the demand has been so large that they could not well handle it at present if it became larger. The company has been pushing its higher-priced output, therefore, this being handled by jewelers, many of whom in the smaller towns, by the way, also handle talking machines.

WAGES AND PRICES.

Some Interesting Facts Presented That Are of Importance.

A bird's-eye view of the tendencies of wages, prices and hours of work, covering the past ten years, makes it clear beyond doubt that as early as 1899 the drift of prices and wages finally parted company with the amount of time spent in exchange for wages.

"During the years 1897-'98 the relative number of hours per week spent at work by employes receiving wages was on the level of 100. But after that year it gradually fell. By the end of 1907 the time spent in wage occupations have fallen to a point between 94 and 96 per cent. of the original level. In other words, a man who in 1897-'98 worked a hundred hours for a given wage would have worked about 94¾ hours ten years later in 1907, had wages remained the same in 1897 and 1898, to quote from no less an authority than the Wall Street Journal.

"But contrary to this assumption, wages did not remain the same. Wages advanced, and that would have been very contrary to the tendency to shorter hours had there not been a counteracting advance in prices. Wages up to 1898 were at much the same level as hours of work. But by the end of 1907 they had gone to a level of 129 hours, making a rise of between 28 and 30 per cent. The equalizing influence came with the rise of prices, from a level of less than 97 in 1897 to a level of 121 in 1907, or an advance of 24 per cent.

"Although prices have not attained the same level as wages, the tendencies of the two have been fairly parallel, with the inclination of wages later to rise more rapidly and of prices to fall somewhat, making the margin in favor of wages still greater, while the downward tendency of time consumed in employment still continued.

"The wage earner in the effort to maintain his standard of living for himself and family occupies a difficult though not untenable position. Prices must follow the reduction in purchasing power. But the safest man is he who selects such a type of living so as to get what is best and enduring out of life, without wasting it in things that weaken and in ways that bring no enduring worth. The best living for most people is always that which selects the best things that civilization has, rather than that which spends in imitation of people richer than themselves."

WHERE TYPEWRITERS FIT IN.

Mr. Talking Machine Dealer, have you ever stopped to consider how well typewriters would fit in your line, especially if you handled commercial machines and records? When a man is sufficiently interested in turning out his correspondence with neatness and despatch to consider the purchase of a commercial talking machine for the purpose, he is certainly in a humor to discuss means of improving the last half of the operation, the typewriting—and there's your chance.

ADMIRABLE QUALITIES.

Men are superior or inferior just in the ratio that they possess certain qualities. Truth, honor, frankness, health, system, industry, kindliness, good cheer and a spirit of helpfulness are far beyond any mental acquisition.—The Fra.

To Business Men

Business men in every line admit the value of good trade papers.

A trade paper must be original—it must contain a variety of matter including news service—technical information—in fact it must crystallize the entire news of the special business world, and be a helpful adjunct to every department of trade.

Scan the columns of The Talking Machine World closely and after you have completed an analysis of the contents of this publication see if you can duplicate its value in any other trade!

The World is a help to the talking machine business.

It exerts an healthful optimism.

It wields an influence for the good and every man who sells talking machines, no matter in what part of the universe he may be located, should receive this publication as regularly as it is issued. He is missing a vital business point if he fails to do this.

Thousands of dealers not only in the United States but in every country on earth consult the pages of the World regularly.

They draw from the World pleasure and profit.

The talking machine business has a brilliant future, and this publication is doing much to enlarge the business horizon of every retail talking machine man in the world.

To receive this paper annually costs but $1.00. All foreign countries $1.25.

EDWARD LYMAN BILL

1 MADISON AVENUE, NEW YORK

SLEZAK

Now Sings for the Edison

Leo Slezak, the great tenor of the Metropolitan Opera House, New York, has made the biggest hit of any singer who has come to this country in years. "Caruso now has a rival," said the New York *World* the morning after a recent performance of Slezak at the Metropolitan.

Slezak has made ten new records for the Edison—Grand Opera Amberol Records. Make these Slezak Records your leader and they'll unload your Grand Opera Record stock and make it sell like ragtime.

Our contract with Slezak is practically exclusive. He will sing his Italian songs and all of the songs in his American repertoire for Edison Records only.

You push Slezak—Slezak will push the rest.

Order from your jobber to-day.
